Letter from the Director...

In 2007, the Central Repository received quarterly sexual assault reports from 101 participating law enforcement agencies across New Mexico, the highest number of participating agencies since it was established in 1999. We are most grateful for the increasing number of collaborations and look forward to our continued success working together.

As usual, law enforcement reported sex crime incidents are captured, as well as sexual assault reports from mental health centers, rape crises centers and Sexual Assault Nurse Examiner (SANE) Programs throughout the state. Findings on these data are reported in Section One.

In Section Three, you can see at a glance, county trends on 14 important sex crime variables.

After nine years of presenting the outcomes of your work in sexual assault prevention, identification, investigation, and treatment, all of us know that the data on lifetime prevalence and annual incidents of sexual assault crimes are quite discouraging. We are all concerned with the numbers of children and adolescents that are sexually abused, because our own data shows that more than half (58%) of adults who seek treatment experienced a prior abuse in their childhood or adolescence. Said another way - children and adolescents that are sexually abused are significantly more likely than those not abused, to be sexually assaulted in the future. Yet, sexual assault prevention of the young is an extremely challenging and uphill battle as most of it happens under their own roofs (48%) or in the residences of other family members and friends (31%). Nevertheless, it is your constant focus on prevention of childhood sexual abuse that has led to changes that dispel damaging social myths about sexual abuse/assault that interfere with the proper response to victimization, and further changes in policy and legislation regarding how victims are helped and how cases are prosecuted and adjudicated.

On behalf of myself, the New Mexico Crime Victims Reparation Commission, Violence Against Women Grants Office, the Department of Health Behavioral Health Services Division and the Injury and Epidemiology Bureau, Office of Injury Prevention, we thank you for your commitment to improving the outcomes regarding this devastating social problem.

Sincerely,

Betty Caponera, Ph.D.
Director

OCTOBER 2008

ACKNOWLEDGEMENTS

On behalf of the Central Repository, I would like to formally thank Governor Bill Richardson and First Lady Barbara Richardson for their unprecedented efforts as state leaders to prevent interpersonal violence in New Mexico and making possible, the first ever statewide survey of interpersonal violence in our state – the *Survey of Violence Victimization in New Mexico*.

I would like to formally acknowledge the host of dedicated professionals who have lent their invaluable expertise to this surveillance initiative.

Program Guidance and Funding:

- Kim Alaburda, Executive Director, New Mexico Coalition of Sexual Assault Programs
- Connie Monahan, SANE Program Statewide Coordinator
- Sheila Allen, State of New Mexico Crime Victims Reparation Commission, VAWA Program Manager
- Larry Tackman, Director, State of New Mexico Crime Victims Reparation Commission
- Michael Landen, Deputy State Epidemiologist, Department of Health, Epidemiologist and Response Division

Data System Analysts:

- Larry Compton, Library Information Specialist, Bureau of Business and Economic Research, NM Census

Report Publication:

- Kim Alaburda, Distribution, New Mexico Coalition of Sexual Assault Programs
- Lisa Meyer, Graphics and Design
- New Mexico Crime Victims Reparation Commission S.T.O.P Violence Against Women Act Grant Office, Printing

** A special thanks to the chiefs, sheriff's, marshals, and records department staff of all the participating law enforcement agencies; executive directors and staff of the sexual assault service providers and SANE programs; and all data entry staff of the individual law enforcement agencies without whom this report would not be possible.*

Service Providers 2007	26 %
SANE 2007	21.5%

EXECUTIVE SUMMARY

I. INTRODUCTION

In 2005, the Department of Health, Office of Injury Prevention obtained funds to conduct a statewide violence victimization survey. The purpose of the survey was to obtain state estimates of the prevalence and nature of victimization among adults in New Mexico.

Preliminary findings from the Survey of Violence Victimization in New Mexico (SVV) were published in the report *Sex Crimes In New Mexico V*, January 2007. A summary of these findings is found in Appendix A of the *Sex Crimes in New Mexico VII*, October 2008 full report. It offers statewide rates of the incidence and prevalence of rape and attempted rape, together with a discussion of the findings on the experience of rape among males and females.

Similarly, further findings from the SVV on the prevalence and nature of rape victimizations among children and adolescents in New Mexico were published in the *Sex Crimes In New Mexico VI*, October 2007 report. A summary of these findings is found in Appendix B of *Sex Crimes in New Mexico VII*, October 2008 full report. Additionally, selected findings from the SVV can be found in the *Fact Sheet* of the full report, as well.

This report summary includes an analysis of 2007 sex crimes data from the New Mexico Interpersonal Violence Data Central Repository, which includes findings from law enforcement, service providers and statewide Sexual Assault Nurse Examiner [SANE] units.

II. SUMMARY OF THE FINDINGS

► There were 101 law enforcement agencies that submitted sexual assault data to the Central Repository during 2007. Presently, these agencies represent 87% of the New Mexico population. There were 2,636 sex crimes reported by participating law enforcement agencies. During the same calendar year, service providers from rape crisis centers and mental health centers served 1,486 victims of sexual assault (as reported on the standardized *Sexual Assault History Form*). SANE Programs served 1,044 sexual assault victims/patients.

► The victim in 85% of law enforcement reported *criminal sexual penetration* crimes was *female*. The victim was female in 75% of law enforcement reported *non-CSP* sex crimes, 87% of those who sought help from service providers and 92% from SANE Programs.

► Males were the perpetrators in 95% of law enforcement reported *criminal sexual penetration* crimes, 93% of law enforcement reported *non-CSP* sex crimes, 98% of sexual assault cases reported by service providers and 92% of sexual assaults reported by SANE Programs.

► Service providers (15%) and law enforcement (8%) reported less *stranger-perpetrated* rapes than that reported by SANE Programs (20%). As reported by service providers, *stranger-perpetrated* rape was two times more likely among *victims who used alcohol/drugs* than among victims who did not use alcohol/drugs.

► Among the 88.5% of offenders known to the victim (as reported by law enforcement), 30% were *related to the victim*. Similarly, of the 85% of known offenders reported by services

providers, 37% were *related to the victim*. By contrast, of 80% SANE patients known to the offender, only 18% were *related to the victim*.

► *Acquaintances* were the categories comprising the greatest proportion of *known* offenders as reported by both law enforcement and service providers (30% and 24%, respectively), while *parents* (7%) as reported by law enforcement, and *fathers* (23%), *uncles* (16.5%) and *step-fathers* (12%), as reported by service providers, comprised the greatest proportion of *related* offenders.

► *Non-personal weapons* (knives, guns, and other deadly weapons) were involved in 2% of sex crimes as reported by law enforcement, 5% of sex crimes as reported by service providers and 11% of sex crimes as reported by SANE Programs. A knife (3%) or gun (2%) was involved in more sex crimes against adolescents, as reported by service providers. Similarly, guns (8%) and knives (6%) were involved in more sex crimes against adolescents than against adults (5% and 3%, respectively).

► As reported by law enforcement, 27% of *criminal sexual penetration* cases, and 8% of *non-CSP* cases involved injury to the victim. SANE Programs however, reported that 66% of their sexual assault patients experienced one or more injuries.

► One-quarter of victims seeking services from service providers and slightly less from SANE programs (21.5%) had a disability prior to their assault. When those with a disability were examined by victim age, significantly more of the victims with a disability were adults (37% service provider reports; 73% SANE reports) than were *adolescent* or *child* victims.

► In New Mexico, 28% of sex crimes as reported by service providers and 16% as reported by SANE Programs were perpetrated by *multiple-offenders*. This is significantly higher than the 9.4% of multiple-offender sex crimes reported nationally.

D. Findings Unique To Service Providers

► There were 370 cases of criminal sexual penetration as reported by service providers that actually specified the type of penetration incident. Of these 55% were *incest* cases, 19% *date rapes*, 18% *spousal rapes* and 9% *gang rapes*.

► As reported by service agencies, more *males* (30%) than *females* (17%) experienced *fondling*, while more *females* than *males*, experienced *criminal sexual penetration* (68% vs. 53%).

► The type of coercion used most often among all victims was *physical force* (36%), followed closely by *verbal threats* (27%) and *manipulation* (23%). *Intentional drugging* was reported in 5% of the sexual assault cases reported by service providers; and *adults* (65%) and *adolescents* (5%) were intentionally drugged more often than *children* (1%).

► Survivors using alcohol/drugs were twice as likely to be assaulted by *multiple offenders* (45%) as those not using alcohol/drugs (22%). Similarly, survivors using alcohol/drugs (25%) were almost twice as likely to be victims of *stranger-perpetrated* rape as survivors not using alcohol/drugs (12%). Further survivors using alcohol/drugs (10.5%) were over two times more likely to contract a *sexually transmitted disease* than survivors who did not use alcohol/drugs (4%).

- ▶ Over one-half (58%) of sexual assault victims were victims of a *prior* sexual assault. Among those previously victimized, 63% were victims of *on-going sexual abuse* and 37% were those who experienced an *isolated prior assault*.
- ▶ Among victims of *on-going* sexual abuse, 76% were victimized by age 12 (38% of which, by age 5), compared with 47% victimized by age 12 among those who experienced an *isolated* assault.
- ▶ Pregnancy resulting from the current sexual assault was documented in 935 cases. Of these, 30 (3%) resulted in a pregnancy.
- ▶ Over half (59%) of survivors and three-quarters (78%) % of offenders had a history of domestic violence. However, a survivor with a *history of domestic violence* was almost two times (1.6) more likely to be offended by someone with a *history of domestic violence*, as a survivor with no history of domestic violence.
- ▶ While most male (43%) and female (56%) victims of sexual assault seek therapeutic services within one-year of the assaults, significantly more male victims (22%) than female victims (15%) waited over 20 years to seek services.
- ▶ One-third (39%) of sexual assault victims, as reported by service providers, sought medical treatment, with female victims (42%) obtaining medical treatment at twice the rate of male victims (22%). Similarly, one-third (37%) of sexual assault victims had rape kit evidence collected, with female victims (40%) having rape kit evidence collected at twice the rate of male victims (18%).

III. IMPLICATIONS OF THE FINDINGS

The rape of children and adolescents in New Mexico is disproportionate among rape victims and must be a primary focus of sexual assault prevention, identification, investigation, and prosecution efforts. Findings from the SVV, law enforcement, service providers, and SANE Programs demonstrate that victims of sex crimes are overwhelmingly female and are most often victimized by age 12. Even when males are sexual assault victims, most are also victimized by age 12. When one considers that parents and step-parents, and other family members are responsible for much of this abuse, it is imperative that parents, guardians and extended family be targeted for prevention education and outreach, to compliment the training of other professionals (teachers, clergy, law enforcement, and judges) who must respond to a suspected sexual assault of a child or a child's disclosure.

The negative effects of sexual violation during childhood cannot be overstated. To be sure, sexual assault during childhood is a precursor to experiencing a sexual assault in the future. Over half (58%) of all those who sought assistance for a sexual assault in the year 2007, had experienced a prior sexual assault. Further, while sexual abuse prevention instruction is recommended for students throughout elementary school, when developmentally appropriate, a necessary component of such education must address the shocking reality that children who are sexually abused are at greater risk of becoming pregnant as a teen, than children who are not sexually abused. Education on self-esteem, self-respect, components for healthy relationships and normal sexual developmental must be addressed to reduce the likelihood of early pregnancy among sexually violated children.

Fifteen percent of service provider sexual assault cases and 8% of law enforcement reported sexual assaults involve a *stranger* offender. SANE Programs reported 19% of their *adolescent* sexual assault patients and 25% of their *adult* sexual assault patients were offended by a *stranger*. Similarly, a significant proportion of *known offenders* as reported by service providers (39%) and law enforcement (30%) were related to the victims, while SANE Programs reported only 8% of their sexual assault patients were related to their offender. These findings suggest that sexual assault victims who are victimized by a *stranger* are more likely to seek medical services and forensic documentation of their victimizations; and that victims who are victimized by a *relative* are less likely to seek medical services and forensic documentation regarding their victimization. By extension, this means that successful prosecution of sexual assaults perpetrated by family members is less likely, and victims of these sex crimes are less likely to access needed services. Since family members comprise a disproportionate number of all perpetrators of reported sexual assaults in our state, it is imperative to provide education and outreach in schools and communities to inform those at risk about services available to them.

Sexual victimizations of adolescents and adults more often involved a gun, knife and intentional drugging than victims of other ages. Adolescents and young adults are vulnerable to date rape and rape by new and/or social acquaintances. Further, alcohol and drug use is associated with a greater vulnerability to stranger rape, multiple offender rape, and the contraction of a sexually transmitted disease. These findings have implications for personal safety instruction and alcohol and drug prevention education programs for high school students.

One-quarter of victims who sought assistance for a sexual assault had some type of disability before the sexual assault. Most of these victims were mentally/emotionally disabled. This speaks to the need for education programs to promote greater awareness among families and communities regarding the vulnerability of their residents with disabilities to being sexually assaulted; and the need for sexuality education and personal safety for individuals with disabilities.

Only one-third (33%) of sex crimes that came to the attention of service providers were reported to law enforcement. Additionally, over 16% of adult victims, 15% of adolescent victims and 9% of child victims in the SVV reported their victimizations to law enforcement. There are several implications: 1) training for healthcare providers to effectively respond to patient disclosures of sexual assault; 2) training of law enforcement officers to respond with sensitivity to the needs of sexual assault victims and initiate advocacy for the victim; and 3) accessible legal advocacy to assist victims through the legal process.

Survivors with a history of domestic violence were two times more likely to be sexually assaulted by someone with a history of domestic violence than survivors who were not exposed to domestic violence in their past. Experiencing domestic violence as a child increases one's vulnerability to abuse and sexual assault as an adult. This finding implies that greater efforts should be made by those in law enforcement and in collaboration with those in the helping professions to identify children from violent homes and provide appropriate counseling services.

Law enforcement reported that 27% of criminal sexual penetration cases and 8% on non-CSP sex crimes involved injury to the victim. Conversely, SANE practitioners found that 66% of their sexual assault patients incurred one or more injuries during their assault. The reasons for the great disparity in injury reporting between law enforcement and SANE practitioners can be explained in part, by the fact that SANE practitioners are specifically trained to identify and document sexual assault injuries; and beyond observable injuries to the head/neck or extremities of the victim, law enforcement officers are not likely to detect injury. Secondly, sexual assault

victims who believe they are injured may be more likely to seek SANE services than sexual assault victims who do not believe they are injured. Therefore, SANE Programs would naturally have a higher rate of victims who experienced injury. All this said, there may be an implication for officer training regarding victim injury in sexual assaults and a more accurate way to report injury on law enforcement offense incident reports.

SEX CRIMES IN NEW MEXICO VII:

An Analysis of 2007 Data from The New Mexico Interpersonal Violence Data Central Repository

Developed by Betty Caponera, Ph.D.

For the New Mexico Coalition of Sexual Assault Programs, Inc.

Funded by:

State of New Mexico: Department of Health — Office of Injury Prevention; Behavioral Health
Services Division; New Mexico Crime Victims Reparation Commission — Violence Against
Women Act Grants Office; and the Violence Against Women Office,
Office of Justice Programs, US Dept. of Justice
Through the New Mexico Coalition of Sexual Assault Programs, Inc.

OCTOBER 2008

I. INTRODUCTION

In 2005, the Department of Health, Office of Injury Prevention obtained funds to conduct a statewide violence victimization survey. The survey was conducted by Schulman, Ronca and Bucuvalas, Inc. (SRBI) a national research organization with over 25 years experience conducting national and statewide surveys on health and trauma issues.

The purpose of the survey was to obtain state estimates of the prevalence and nature of victimization among adults in New Mexico. The sample for the *Survey of Violence Victimization in New Mexico* (SVV) was drawn from a statewide sample of telephone households developed by random digit dialing (RDD). A statewide random sample of 4,000 adults aged 18 and older: 2000 males and 2000 females were interviewed. Interviewing for the survey was conducted between December 6, 2005 and January 22, 2006. Comprehensive information regarding the survey methods used (sample construction, instrument design, programming, testing, interviewer selection, training, monitoring, conducting the interviews, response rates, field outcomes, data preparation and processing) is found in the *Survey Methods Report* available upon request from the Central Repository.

Preliminary findings from the SVV were published in the report, *Sex Crimes In New Mexico V*, January 2007. A summary of these findings is found in **Appendix A**. It offers statewide rates of the incidence and prevalence of rape and attempted rape, together with a discussion of the findings on the experience of rape among males and females.

Similarly, further findings from the SVV on the prevalence and nature of rape victimizations among children and adolescents in New Mexico were published in the *Sex Crimes In New Mexico VI*, October 2007 report. A summary of these findings is found in **Appendix B**. Additionally, selected findings from the SVV can be found in the *Fact Sheet* of this report, as well.

This report has three sections: *Section One* presents an analysis of 2007 sex crimes data from the New Mexico Interpersonal Violence Data Central Repository, which includes findings from law enforcement, service providers and statewide Sexual Assault Nurse Examiner (SANE) units; *Section Two* presents a discussion of the implications of the findings; and *Section Three* offers county tables to present important trends information specific to each county.

SECTION ONE: ANALYSIS OF 2007 SEX CRIMES DATA FROM THE CENTRAL REPOSITORY

I. ABOUT THE CENTRAL REPOSITORY

The Central Repository is supported by the State of New Mexico Department of Health, Office of Injury Prevention and Behavioral Health Services Division and the Violence Against Women Act. It was established in 1998 to house data submitted from a variety of agencies statewide (law enforcement, district and magistrate courts, and domestic violence service providers) that deal with the issue of domestic violence. In 2001, the Central Repository began capturing statewide sexual assault data, as well. To this end, sexual assault data from law enforcement agencies and the courts, as well as data from rape crisis centers, mental health centers, and SANE Programs that provide services for sexual assault victims, are submitted to the Central Repository.

Currently, standardized data from each aforementioned discipline are submitted to the Central repository on a quarterly basis. The data analyzed for this report covers sexual assault law enforcement, service provider and SANE data for the period 1/1/07 – 12/31/07.

II. LAW ENFORCEMENT REPORTED SEX CRIMES

A. DEFINITIONS

Sexual assault incidents captured in New Mexico include the following statutes regarding sexual offenses. These statutes are presented in brief. Full definitions are found in **Appendix C**.

30-9-11 Criminal sexual penetration

A. Criminal sexual penetration is the unlawful and intentional causing of a person to engage in sexual intercourse, cunnilingus, fellatio or anal intercourse or the causing of penetration, to any extent and with any object, of the genital or anal openings of another, whether or not there is any emission.

30-9-12 Criminal sexual contact

A. Criminal sexual contact is the unlawful and intentional touching of or application of force, without consent, to the unclothed intimate parts of another who has reached his eighteenth birthday, or intentionally causing another who has reached his eighteenth birthday to touch one's intimate parts.

30-9-13 Criminal sexual contact of a minor

A. Criminal sexual contact of a minor is the unlawful and intentional touching or applying force to the intimate parts of a minor or the unlawful and intentional causing of a minor to touch one's intimate parts. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

30-9-14 Indecent exposure

A. Indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view. As used in this section, "primary genital area" means the mons pubis, penis, testicles, mons veneris, vulva or vagina.

30-10-3 Incest

A. Incest consists of knowingly intermarrying or having sexual intercourse with persons within the following degrees of consanguinity: parents and children including grandparents and grandchildren of every degree, brothers and sisters of the half as well as of the whole blood, uncles and nieces, aunts and nephews.

30-9-1 Enticement of child

Enticement of child consists of:

- A. Enticing, persuading or attempting to persuade a child under the age of sixteen years to enter any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 (30-9-1 to 30-9-9 NMSA 1978) of the Criminal Code; or
- B. Having possession of a child under the age of sixteen years in any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 of the Criminal Code.

30-6A-2 Sexual Exploitation of Children

- A. and B. It is unlawful for any person to intentionally *possess* or *distribute* any visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows or has reason to know that one or more of the participants in that act is a child under eighteen years of age.
- C. It is unlawful for any person to intentionally cause or permit a child under eighteen years of age to engage in any prohibited sexual act or simulation of such an act if that person knows, has reason to know or intends that the act may be recorded in any obscene visual or print medium or performed publicly.
- D. It is unlawful for any person to intentionally manufacture any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age.

B. LAW ENFORCEMENT REPORTED INCIDENCE OF SEXUAL ASSAULT

There were 101 law enforcement agencies that submitted sexual assault data to the Central Repository during 2007 (see **Appendix D**). Presently, these agencies represent 87% of the New Mexico population. Data from each participating agency was extracted from police offense incident reports and submitted in aggregate form on the standardized *Law Enforcement Sexual Violence Data Collection Form* (see **Appendix E**).

1. All Law Enforcement Reported Sex Crimes

In 2007, there were 2,636 sex crimes reported by participating law enforcement agencies. For a list of sex crime reports by law enforcement agency, see **Table 1**. For a list of sex crime reports by county, see **Table 2**. Of the reported sex crimes, 51% (1,344) were cases of *criminal sexual penetration*, 28% (740) *criminal sexual contact of a minor*, 8% (202) *criminal sexual contact*, 6% (162) *indecent exposure*, 5% (146) *child enticement* and 2% (42) *sexual exploitation*, see **Figure 1**.

2. Law Enforcement Reported Criminal Sexual Penetration (Rape) Incidents

The number of criminal sexual penetration (rape) cases per county that were reported to law enforcement in 2007 is shown in **Appendix F**. The *rate* of law enforcement reported *criminal sexual penetration* (LER-CSP) incidents in New Mexico was calculated based on counties with complete reporting (those counties with the law enforcement agency from the

largest city(s) reporting). The rate of law enforcement reported criminal sexual penetration for New Mexico is 0.74 per 1000 persons, which is similar to the 0.70 rate reported in 2006. A ranking of law enforcement reported criminal sexual penetration rates for counties with complete reporting is found in **Appendix G**.

C. CHARACTERISTICS OF CRIMINAL SEXUAL PENETRATION CASES

1. Victim and Offender Gender

There were 1,409 criminal sexual penetration victims identified from the 1,344 law enforcement sexual assault reports. Victim *gender* was documented in 1,167 cases. Of these, 993 (85%) were *female* victims and 174 (15%) *male* victims.

Of the 1,344 cases of criminal sexual penetration, 1,146 offenders were identified. Offender gender was documented in 911 reports. Of these, 95% (862) had a *male* offender.

2. Victim and Offender Age

Of the 827 reports of criminal sexual penetration that identified *victim age*, the greatest proportion of all victims were in the age group *13-18* (30%), followed by victims age *0-6* (19%), victims *7-12* (18%) and victims *19-25* (13%). Conversely, of the 483 reports that identified *offender age*, the greatest proportion of all offenders were in the age group *19-25* (24%), followed closely by offenders *26-35* (23%). Offenders *13-18* and *36-45* comprised 16% respectively, of all offenders. See **Figure 2**.

3. Victim and Offender Ethnicity/Race

Of the 1,140 criminal sexual penetration cases that identified *victim ethnicity/race*, 50% (565) were *White (non-Hispanic)*, 35% (398) were *Hispanic*, 8% (88) *Native American*, 3% (30) *Other*, 5% (53) *Black*, and 1% (6) *Asian*. Likewise, of the 838 CSP cases that identified *offender ethnicity/race*, 46% (388) were *White (non-Hispanic)*, 34% (286) *Hispanic*, 7% (61) *Native American*, 8% (71) *Black*, 3% (28) *Other*, and 0% (4) *Asian*. For a comparison of victim and offender ethnicity/race to ethnic/racial compositions in New Mexico, see **Figure 3**.

4. Victim/Offender Relationship

The *victim/offender relationship* was documented in 797 of the 1,344 reported cases of criminal sexual penetration. Of these, 11.5% (92) were perpetrated by a *stranger* to the victim and 88.5% (705) were perpetrated by someone *known* by the victim.

There were 641 cases which documented whether or not the known perpetrator was a *relative*. Of these, 30% (191) were *relatives*.

While law enforcement agencies report whether the offender was a stranger or known to the victim, they do not further report the *type of relationship* among *known* offenders. However, such documentation is available from Bernalillo County in the reported cases of criminal sexual penetration submitted by the *Albuquerque Police Department* and the *Bernalillo County Sheriff's Office*. Of the 512 cases of criminal sexual penetration reported by law enforcement agencies in Bernalillo County, the *victim/offender relationship* was documented in 385 cases. Of these, 26 (7%) were perpetrated by a *stranger* and 359 (93%) by *someone known* to the victim. Relatives comprised 21% of the *known* offenders or 20% (77) of all victim/offender relationships documented. *Acquaintances* comprised the largest category of known non-family offenders 30% (117), followed by *other unspecified known offenders* 13% (51), *boyfriends/girlfriends* 12% (47) and *friends* 7% (28). **Figure 4** illustrates the number and percent of each type of *victim/offender relationship* identified.

5. Weapon Use and Injury

There is a parallel between weapon use in sexual assault incidents and its use in domestic violence incidents, though there is a reluctance among professionals in the field of sexual violence prevention and prosecution to report this observation. Because the intent in a domestic assault or battery is to physically harm the victim, an offender's fists and feet used in kicking, slapping, or punching a victim are considered "personal weapons". Applying this liberal definition of a *weapon* to CSP crimes would result in 82% or 518 of 630 cases in New Mexico, involving a weapon. However, while this demonstrates comprehensive and accurate reporting, there is great reluctance in reporting such high rates of weapon use in sexual assault incidents. Sexual assault advocates and prosecutors have been working for years to dispel the long held social myth that unless there is a "non-personal" or deadly weapon involved, the victim consented too easily and must have freely engaged in the sexual activity. In truth, a very small proportion of CSP cases nationally, involve a "non-personal" weapon, such as a gun, knife, bat, etc. The same is true in New Mexico, as only 2% or 8 of 492 cases documenting *type of weapon used* involved "non-personal" weapons.

While it is most appropriate to include "personal weapons" in a weapon count in sex crimes and in domestic violence crimes, it is crucial to argue that sexual assault victims are raped, i.e. forced against their will, even without the presence of a weapon of *any* kind. The law states clearly, that just the presence of a *threat* of physical harm that the victim believes can be presently executed, is all that is required to demonstrate force or coercion. The requirement of "personal", "non-personal" and/or deadly weapon-use to justify that victim resistance occurred during a sexual assault incident must be eliminated.

Of the 734 cases that documented whether the victim was injured, victim injury occurred in 27% (200) of the cases.

Figure 4. Victim/Offender Relationship in CSP Sex Crimes in Bernalillo County as Reported by Law Enforcement: Offender Was ...

6. Alcohol and Drug Use

There were 825 cases of criminal sexual penetration where *alcohol/drug use* was documented. Of these, alcohol and/or drugs were used in 43% (354) of cases. Of the 354 cases where alcohol or drugs were used, 335 documented the using party(s). *Offender-only* use of alcohol/drugs was reported in 50% (168) of cases. *Victim-only* use was found in 19% (65) of cases, and both the *victim* and *offender* used alcohol/drugs in 30% (102) of cases. See **Figure 5**. Therefore, offenders used alcohol/drugs in 80% of the cases involving alcohol/drug use and victims used alcohol/drugs in 49% of the cases involving alcohol/drug use.

7. Children Witnesses to Criminal Sexual Penetration

When analyzing data regarding children, two variables are analyzed: 1) the *number of incidents* that at least one child was present; and 2) the total *number of children* present. In 2007, 101 law enforcement agencies reported to the Central Repository. Of these, 77 reported at least one case of criminal sexual penetration but 62 of these agencies did not report how many incidents had children present, or how many total children were present during their reported CSP incidents. There were 131 cases that documented the *number of incidents* where at least one child was present. Of these, 23 (18%) cases had at least one child present. There were 30 children present at these 23 incidents, or 1.3 children per incident. There were 766 reports that documented the *total number of children present*. Of these, the total number of children present was 197 (a number that represents 26% of the number of CSP reports).

Of the 197 children present during the CSP incidents, the age of the child was documented in 182. Of these 20% (36) were age 0-5; 15% (28) 6-9; 11% (20) 10-12; 21% (38) 13-17; and 33% (60) 18-21. See **Figure 6**.

8. Suspect Arrests for Criminal Sexual Penetration Incidents

There were 758 cases of criminal sexual penetration that documented whether there was a suspect arrest. Of these, 118 (16%) cases had a suspect arrest. Among agencies with 10 or more

reported CSP cases, the *San Juan County Sheriff's Office* had the most incidents with a suspect arrest at 42% or 5 of 12 reported cases, followed by the *Santa Fe County Sheriff's Department*, 26% or 6 of 23 cases. See **Table 3**.

D. CHARACTERISTICS OF OTHER (NON-PENETRATION) LAW ENFORCEMENT REPORTED SEX CRIMES

While participating law enforcement agencies throughout the state report on the number of *non-penetration* sex crimes, including *criminal sexual contact*, *criminal sexual contact of a minor*, *indecent exposure*, *sexual exploitation*, and *child enticement* cases, they do not provide *details* about the nature of these crimes. However, data are available from the Albuquerque Police Department and the Bernalillo County Sheriff's Office that assist in characterizing these *non-penetration* crimes.

1. Victim and Offender Gender

There were 521 *non-penetration* sex crimes in Bernalillo County. There were 548 victims identified in these crimes. Victim *gender* was documented in 522 of the victims identified. Of these, 75% were female. This is less than the 85% of female victims in law enforcement reported criminal sexual penetration (CSP) crimes. There were 404 offenders identified in the non-penetration sex crimes. The suspect gender was documented in 398. Of these, 93% (370) were male. This is similar to the 95% of male offenders in CSP crimes.

2. Victim and Offender Age

The *victim age* was documented in 313 of the 548 victims identified in Bernalillo County sex crimes. Of these, 83% were not yet adolescents: 46% were ages 0-6 and 37% were ages 7-12. Another 11% of victims were ages 13-18. Two percent respectively, were ages 19-25, ages 26-35. See **Figure 7**. *Offender age* was only documented for 56 of the 404 offenders. Therefore, this variable was not analyzed. Refer to Figure 7.

3. Victim and Offender Ethnicity/Race

Victim and offender *ethnicity/race* variables from the Albuquerque Police Department and the Bernalillo County Sheriff's Office shared records database were unreliable. Since this shared database is the only one that captures specifics on *non-penetration* sex crimes, no other ethnicity/race data on these crimes were available for analysis.

4. Weapon Use and Injury

Bernalillo County law enforcement agencies reported 80% or 419 cases out of 521 *involved a weapon*. However, there were no reports which included a "non-personal" or deadly weapon. Although 27% of *CSP* cases involved injury, only 8% (40) of *non-penetration* sex crimes involved injury.

5. Alcohol/Drug Use

Similar to the injury findings, while 43% of *CSP* cases involved alcohol/drug use, only 14% of *non-penetration* cases involved alcohol/drug use.

6. Children Witnesses to Non-Penetration Sex Crimes

There were 45 children who witnessed an unknown number of the reported 521 non-penetration sex crimes (the number of *incidents* which had a child present was not documented, only the total number of children present for all incidents). Of these, 42% (19) were age 0-5, 33% (15) were 6-9, 13% (6) were age 10-12, 7% (3) were age 13-17 and 4% (2) were age 18-21. See **Figure 8**. A comparison of the age of children present at *CSP* crimes versus non-penetration sex crimes, illustrates that significantly more (75%) young children (< 13 years of age), were present during *non-penetration* crimes compared to the proportion present during *criminal sexual penetration* crimes (46%). Refer to Figure 6.

7. Suspect Arrest in Non-Penetration Sex Crimes

Of the 521 *non-penetration* sex crimes in Bernalillo County, there was no arrest made in 446 or 86%. This is slightly higher than the 84% of *CSP* crimes where no arrest was made.

III. SEXUAL ASSAULT SERVICE PROVIDERS AND REPORTED SEX CRIMES

There were 25 sexual assault service provider agencies that submitted data to the Central Repository in 2007 (see **Appendix H**). Therapists from participating agencies complete the *Sexual Assault History* form, a standardized data collection instrument used by mental health and rape crisis centers throughout New Mexico to capture information on each client who presents for therapy for a recent or past sexual offense (see **Appendix I**). The data presented herein represent clients who presented for therapy between 1/1/07 and 12/31/07 for a recent or past sexual assault. Completed *Sexual Assault History* forms are submitted to the Central Repository on a monthly basis. There were 1,486 clients who received services for a sexual assault victimization. This represents a 3% increase from that reported in 2006. Completed forms on these survivors were analyzed for this report.

The *La Pinon* (Las Cruces) served 28% (423) of all sex crimes survivors seen in 2007, followed by the *Rape Crisis Center of Central New Mexico* 21% (316), *Santa Fe Rape Crisis Center* 10% (149), the *Counseling Center* (Alamogordo) 9% (129) and *El Refugio* 8% (113). See **Table 4**. For an examination of survivors served by county, see **Table 5**.

It is difficult to make a meaningful comparison between the number of sexual assault cases reported by *service providers* per county and the number of sex crimes reported by *law*

enforcement per county because only 36% (538) of all survivors who sought treatment in 2007 experienced the sexual assault in 2007. However, one may make a comparison simply based on a 12 month interval basis, i.e. in the same period of time that law enforcement reported 2,636 sex crimes, therapists served 1,486 survivors. See **Table 6**. The number of survivors seen represents 56% of the number reported by police in the same time frame.

A. SURVIVOR DEMOGRAPHICS

1. Gender of Survivor

Of the 1,486 sexual offense reports, 1,436 documented the *gender of the survivor*, 87% (1,255) of which were *female*. This is lower than the 91% of female survivors of sexual offenses reported nationally (Bureau of Justice Statistics, Sex Offenses and Offenders, 1997). The *Counseling Center* (Ruidoso) served the most males among survivors served (50%), followed by *Tri-County Community Services* (29%) and *Mental Health Resources* (Portales) (25%). See **Table 7**.

2. Age of Survivor At Time of Current (Presenting) Sexual Assault

Of the 1,280 reports where *age of survivor at the time of the current assault* was documented, the greatest percentage of victimizations occurred between the ages of 13 and 17 (23%), followed closely by victimizations occurring between ages 6-12 (20%). See **Figure 9**. A comparison of *age at the time of the current sexual assault* between males and females reveals that more *males* (69%) of all males assaulted, were victims before age 18, compared to the percent of females among female survivors who were assaulted before age 18 (51%). See **Figure 10**.

Since there is a significant difference between genders with regard to the age of the survivors at the time of the most recent assault when examining all types of assault, an analysis was conducted to compare the age of survivors for males and females between *criminal sexual penetration* crimes and *non-penetration* sex crimes.

In *criminal sexual penetration crimes*, the proportion of *male children* raped (45%) among all males who were raped is significantly more than the proportion of *female children* raped (22%) among all females who were raped. Beyond age 12, with the exception of ages 35-44, a greater proportion of *females* than males were raped in every age group. See **Figure 11**.

Similarly, in *non-penetration sex crimes* (criminal sexual contact, criminal sexual contact of a minor, sexual exploitation, child enticement, indecent exposure) the proportion of *male children* (<13) victimized (70%) among all males victimized is also significantly greater than the proportion of female children victimized (46%) among all females victimized. See **Figure 12**.

3. Age of Survivor At Presentation For Therapy

The *age of the survivor when presenting for therapy* was documented in 1,377 of the sexual offenses reported. Of these cases, the age groups with the most presentations was 18-24 and 25-34 with 19% respectively, closely followed by the age group 35-44 (16%). See **Figure 13**.

Males presented for therapy most often during the ages of 6-12 (18%), followed closely by males ages 18-24 and 35-44 (15%, respectively). *Females* presented for therapy most often between the ages of 18-24 and 25-34 (20%, respectively) followed by 35-44 (16%) and 13-17 (15%). See **Figure 14**.

The sexual assault reports from service providers in 2007, were analyzed to determine the proportion of victims who sought therapeutic services for their sexual assault within one year of the assault, and the proportion of victims who waited longer than one year. Over half (56%) of female victims and nearly half (43%) of *male* victims sought therapy within one year of their sexual assaults. After one year, significantly more males (22%) than females (15%) waited over 20 years to seek services. See **Figure 15**.

4. Survivor History of Prior Sexual Assault/Abuse

Prior sexual assault/abuse was documented in 813 service provider reports. Of these, 473 (58%) were sexually assaulted prior to the current assault. The age of the survivor at the time of the prior assault was documented in 350 of the 473 cases. Of these, 221 were survivors who were victims of *on-going sexual abuse*. The age at onset of abuse is shown in **Figure 16**. Seventy-six percent of these prior victimizations occurred by age 12. Of the 129 cases of *isolated prior sexual assault incidents*, 47% occurred by age 12, 31% between the ages of 13 and 17, and 22% were individuals 18 and older. Refer to Figure 16.

5. Ethnicity/Race of Survivor

Ethnicity/race of the survivor was documented in 1,273 of reported sexual offenses. Forty-six percent of the reported survivors were *Hispanic*, 40% were *White (non-Hispanic)*, 6% were *Native American*, 5% were of *mixed race/ethnicity*, and 2% were *Black*. For a comparison of these percentages to the ethnic/racial composition of New Mexico, see **Figure 17**.

When *race/ethnicity* was examined among *male rape victims seeking services*, there were too few *Native American* (4), *Black* (0), and *mixed race/ethnicity* (8) male rape victims to examine. Among *White (non-Hispanic)* male rape victims, significantly more were children (42%), than adolescents (21%) or adults (36%). Similarly, among *Hispanic* male rape victims, 52% were children, 11% adolescents, and 37% adults. See **Figure 18**.

When *race/ethnicity* was examined among *female rape victims seeking services*, slightly more *White (non-Hispanic)* female victims (53%), *Native American* female victims (54%) and female victims of *mixed race/ethnicity* (57%) were adults. Slightly more *Hispanic* female victims (52%) were *children* and *adolescents*. Among *Black* female victims, an equal proportion were children/adolescents and adults, 50% respectively. However, the number of *Black* female rape victims is so few (14), this proportion should be viewed with caution. See **Figure 19**.

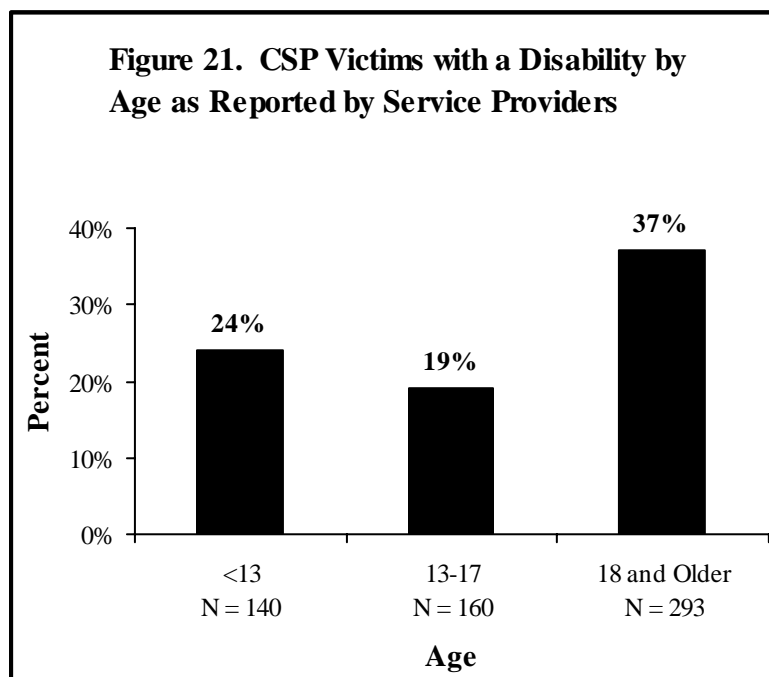

6. Survivor Disability

Of the 988 reports that documented *disability of the survivor*, 25% (244) had a disability. The highest reported disability among the 244 survivors with a disability was *emotional/mental disability prior to the sexual offense incident*, accounting for 157 (64%) of the 244 documented cases of disability. One-third (36%) of cases reported a *physical disability*: 5% *hearing*, 5% *visual*, 7% *mobility* and 18% a *non-specified physical disability*. See **Figure 20**.

When rape victims with a *disability* were examined by *age*, more *adult* (18 and older) rape victims (37%) had a disability than *adolescent* victims 13-17 (19%) or *child* (12 and under) victims (24%). See **Figure 21**.

When *race/ethnicity* was examined among rape victims with a disability, a greater proportion of *Native American* (35%) and *White (non-Hispanic)* rape victims (34%) had a disability than *Hispanic* (26%) and *Black* (17%) rape victims and victims of *mixed race/ethnicity* (7%). As there were too few (12) *Black* rape victims and victims of *mixed race/ethnicity* (7) where disability was documented, these numbers should be viewed with caution. See **Figure 22**.

B. OFFENDER DEMOGRAPHICS

1. Gender of the Offender

Of the 1,293 sexual offense cases where *gender of the offender* was documented, 1,248 (96.5%) were *male* and 45 (3.5%) *female*. Similarly, among 704 rape cases where offender gender was documented, 687 (98%) were *male*.

2. Age of Offender

Age of the offender was documented in 593 of the offense reports submitted. The age groups with the greatest number of offenders were *18-24* and *25-34* (22% respectively), followed by the *13-17* and *35-44* age groups (18%, respectively). See **Figure 23**. The 21% of offenders represented in the <18 age groups is significantly higher than the percents of *single offenders* (10.9%) and *multiple offenders* (4.4%) *younger than 18*, that were reported nationally (Bureau of Justice Statistics, 1997).

3. Offender Race/Ethnicity

In 80% (572 of 691) of documented cases, the offender was the *same ethnicity/race* as the victim. However, the proportion of offenders of each race/ethnicity that were the same race/ethnicity as the victim differs as shown: eighty-nine percent of *Hispanic* offenders were the same ethnicity as their victims (247 of 278) compared to 88% of *Native American* offenders (37 of 42), 87.5% of *Black* offenders (7 of 8), and 76% of *White (non-Hispanic)* offenders (194 of 255). Only 14% (4 of 28) of offenders of *mixed race/ethnicity* were the same as their victims. For these offenders and *Black* offenders these findings should be viewed with caution as too few reports in these race categories captured this variable. See **Figure 24**.

C. SEXUAL OFFENSE CHARACTERISTICS

1. Type of Sexual Offense

The type of sex offense was documented in 1,130 of the reported 1,486 cases reported by service providers. Of these 65% (731) were *criminal sexual penetration* (CSP – oral, anal, and/or vaginal penetration), 19% (213) *fondling*, 5% (55) *sexual harassment*, 2% (23) *stalking*, 5% (58) *criminal sexual contact* and 4% (50) *indecent exposure*. See **Figure 25**.

Of the 731 cases involving CSP, 361 did not specify the circumstances of the rape. In the 370 cases of CSP that specified the assault circumstances, *incest* accounted for 55% (202). *Date/Acquaintance rape* comprised 19% (69) of the specified CSP cases. *Spousal rape* comprised 18% (65) of the specified assaults and *gang rape*, 9% (34). See **Figure 26**.

There were 1,099 sexual assault cases where both the *survivor gender* and *type of offense* were known. When examined by *gender*, a significantly greater proportion of *females* (68%) among female survivors experienced CSP than *males* experienced CSP (53%) among male survivors. Conversely, a significantly greater proportion of *males* among male survivors experienced *fondling* (30%) and *indecent exposure* (8%), than females experienced *fondling* (17%), and *indecent exposure* (4%) among female survivors. See **Figure 27**.

2. Survivor/Offender Relationship

Survivor/Offender relationship was documented in 1,253 of the reported cases of sexual assault. In general, 15% (191) were perpetrated by a *stranger* and 85% (1,062) by someone *known to the victim*.

There were 1,186 cases that documented both *stranger-perpetrated* sexual offenses and the *ethnicity/race of the survivor*. Of the 482 cases with *White (non-Hispanic)* survivors, 14% (68) experienced *stranger-perpetrated* sexual assault. Likewise, of the 543 cases with *Hispanic* survivors, 13% (72) experienced *stranger-perpetrated* sexual assault. *Stranger-perpetrated* sexual assault was experienced by 28% (22 of 78) of *Native American* survivors, and by 14% (8 of 57) of survivors of *mixed race ethnicity*. There were 26 reports on *Black* survivors that documented the relationship of the offender. Of these, 11.5% (3) were *stranger-perpetrated* rapes. See **Figure 28**.

There were 1,266 cases that documented both *stranger-perpetrated* sexual offenses and *survivor gender*. Of these documented cases, 151 were *male* survivors and 1,105 *female* survivors. Of the cases with *male* survivors, 9% (14) were *stranger-perpetrated*, compared to 16% (173) of the cases of with *female* survivors.

Of the sexual offenses reported to service providers, 85% (1,062) were committed by someone known to the survivor. Of those offenders *known to the survivor*, 39% (417) were *family members/relatives*.

Of the sexual offenses committed by *family members/relatives*, *fathers* were the highest group of reported offenders, committing 97 (23%) of all *family member* sexual offenses. *Uncles*, 69 (16.5%) and *step-fathers*, 49 (12%). *Brothers*, 45 (11%) and *cousins*, 41 (10%) represented the relatives next most likely to offend, followed by *current spouses*, 39 (9%), *other unspecified relatives*, 26 (6%) and *grandfathers*, 24 (6%). See **Figure 29**.

Of the 645 *non-family offenders known to the survivor*, friends 92 (14%), new acquaintances 86 (13%), boyfriends 67 (10%) and social acquaintances 67 (10%) comprised almost half (47%) of these offenders. Therapists comprised the next highest reported category of *known offenders*, committing 37 (6%) of *known offender* sexual offenses, followed closely by *mom's boyfriend* 34 (5%). See **Figure 30**.

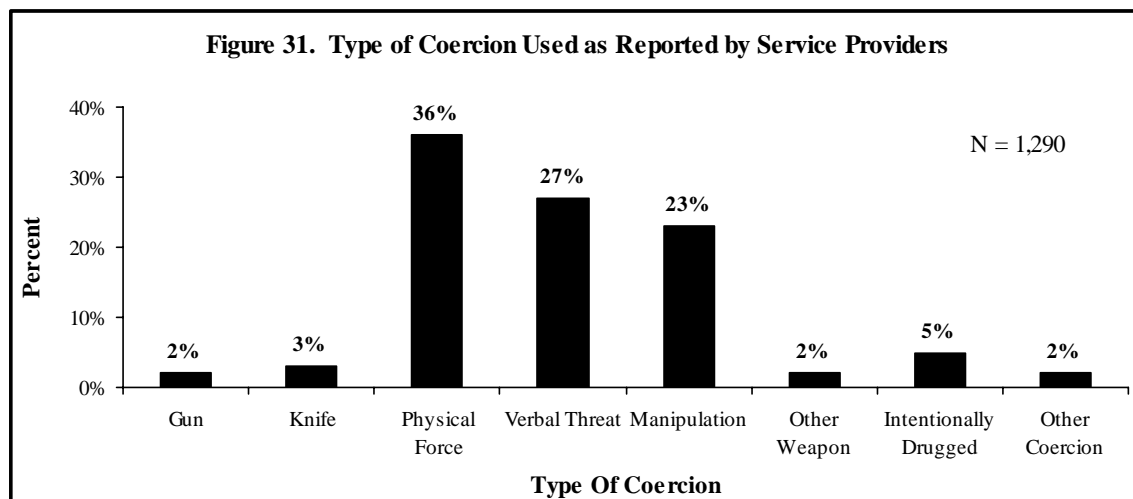

3. Number of Offenders Involved Per Sexual Assault

The *number of offenders* per sexual assault was documented in 1,471 of reported sexual offenses. Of the documented reports, 72% (1,065) involved *one* offender. The 28% of cases involving *multiple offenders* as reported by therapists, is higher than the 9.4% of *multiple-offender* sexual assaults reported in national victimization surveys (Criminal Victimization in the United States, 1994). Of the *multiple-offender* assaults reported, 4% (62) involved *two offenders*, 1% (20) involved *three offenders*, and 22% (324) involved *four-or-more offenders*.

There were 1,052 cases that identified *survivor alcohol/drug use* and the *number of offenders* involved. Of these, 279 used alcohol/drugs and 773 did not. Survivors using alcohol were twice (45%) or (91 of 201) as likely to be victimized by multiple offenders as survivors not using alcohol/drugs (22%) or (188 of 851).

4. Type of Coercion Used

Because more than one type of coercion was used with some survivors, there were 1,290 types of coercion reported in 707 sexual assaults that documented this variable. Of these, the *type of coercion* used most was *physical force* (36%), followed by *verbal threat* (27%) and *manipulation* (23%). *Weapons* accounted for 7% of the types of coercion used: *knives* (3%), *guns* (2%) and *other weapons* (2%). *Intentional drugging of the victim by the perpetrator* accounted for 5% of the total types of coercion used and 2% of the types of coercion used were *other*, unspecified means. See Figure 31.

Physical force (39%) was used on *adult* victims (ages 18 and older) and *adolescent* victims (ages 13-17) (35%) more than any other type of coercion. *Manipulation* (36%) was used on *child* victims (ages 12 and under) more than any other type of coercion, followed by *verbal threat* and *physical force* (29%, respectively). *Intentional drugging of the victim by the perpetrator* was used most often on *adults* (6%) and *adolescents* (5%). *Knives* (3%) and *other weapons* (4%) were used most often on *adults* and *guns* were used equally on *adults* and *adolescents* (2%, respectively). See Figure 32.

When examined by gender, significantly more *females* (37%) experienced *physical force* than *males* (30%). Similarly, more *females* experienced *gun use* (2%), than *males* (0%) and more *females* were *intentionally drugged* (5%) than *males* (1%). *Males* were more likely to experience *manipulation* (34%) and *verbal threat* (29%) than *females* (22% and 27%, respectively). *Males* and *females* were equally likely to experience *knife use* (3%, respectively) and *other* unspecified weapon use (2%, respectively). See **Figure 33**.

5. Use of Alcohol/Drugs

a. Survivor

Of the 1,062 reports that documented *alcohol/drug use*, 26% (279) of survivors used alcohol or other drugs during the reported (current) *assault*. There were 270 of these cases that documented the survivor/offender relationship. Of these, 25% were committed by a *stranger*. Conversely, of 781 cases where the survivor did not use alcohol/drugs, there were 741 that documented the survivor/offender relationship. Of these, 12% were committed by a *stranger*. This suggests that *alcohol/drug use* presents a vulnerability to *stranger* rape: those who use alcohol/drugs are *two times* more likely to experience rape by a stranger than those who avoid alcohol/drugs.

There were 1,009 sexual assault cases where both *survivor alcohol/drug use* and *ethnicity/race* were documented. Of these, *Native American* survivors were most likely to use alcohol or other drugs at the time of their sexual assault, with 46% *Native American* survivors reporting *alcohol/drug use*. Approximately one-quarter of *Hispanic* (27%) and *White (non-Hispanic)* survivors (25%) used alcohol/drugs at the time of their sexual assault. *Black* survivors and survivors of *mixed race/ethnicity* comprised 14% and 12%, respectively of survivors using alcohol/drugs. Both *ethnicity/race* and *survivor alcohol/drug use* was documented in too few cases (7) with *Asian* survivors to allow for meaningful analysis. See **Figure 34**.

b. Offender

Use of alcohol or other drugs by offenders was documented in only 469 of the 1,486 sexual offense reports. Of these, 63% (296) of offenders *used alcohol or other drugs* during the reported (current) assault.

6. Location of Sexual Offenses

Of the 796 reports from therapists that documented *location of the sexual assault*, 42% (338) were committed in the *survivor's home*. This is higher than the reported 34% of sexual assaults committed in the survivor's home as reported in national victimization surveys (Criminal Victimization in the United States, 1994). The *offender's home* represented the location of the second highest category of reported offenses, 22% (176) followed by a *residence other than the survivor or offender's home* 10% (79). Five percent (41) of the assaults occurred in a *vehicle* and 2% (14) in *multiple locations*. See **Figure 35**.

7. Domestic Violence and Sexual Assault

Domestic violence history among survivors was documented in 776 of the sexual offense reports. Of these cases, 59% (457) of survivors reported a *history of domestic violence*.

Domestic violence history among offenders was understandably reported in a fewer number of cases, since many survivors of assault do not know this information about their offenders. However, of the 167 cases where survivors knew and reported the *domestic violence history of the offender*, 78% (131) of offenders had a *history of domestic violence*.

Of these cases there were 154 cases that also documented the *survivor's* history of domestic violence. Of 45 survivors with *no history* of domestic violence, 42% (19) were offended by someone *with a history* of domestic violence. Conversely, of 109 survivors *with a history* of domestic violence, 94% (102) were offended by someone *with a history* of domestic violence. This suggests that a survivor *with a history* of domestic violence is significantly more likely to be offended by someone *with a history* of domestic violence than a survivor who does not have a history of domestic violence.

8. Sexually Transmitted Disease, Pregnancy, and Sexual Assault

a. Sexually Transmitted Diseases (STD's)

Of the 604 cases where *contraction of a sexually transmitted disease* was documented, 29 (5%) of the survivors contracted a sexually transmitted disease during the reported (current) sexual assault.

There is a significant correlation between *survivor use of alcohol* and the likelihood of *contracting a sexually transmitted disease*. Those survivors who *used alcohol/drugs* were almost *three times* (2.7) more likely to contract a STD than those who did not use alcohol/drugs. Of the total reported sexual assaults that documented whether *alcohol/drugs* were used and whether there was *the contraction of a sexually transmitted disease*, 10.5% or (8 of 76) of those survivors who did use alcohol contracted a STD, compared to 3.9% or (19 of 492) among survivors who did not use alcohol.

b. Pregnancy

There were 935 cases that documented whether or not a pregnancy resulted from the presenting sexual assault incident. Of these cases, 30 (3%) resulted in a pregnancy.

9. Reported Sexual Assault

Of the 1,486 sexual assault offenses, there were 1,329 which documented whether the assault was reported to a professional agency. Of these, 320 (24%) were *not reported*. Of the 1,009 that were reported, 76% (770) were reported by the *survivor*, 1% (11) by the *therapist*, 1% by *law enforcement* and 22% (220) by *others* not specified.

There were 1,502 reports made on 804 sexual assaults, as each assault may have been reported to more than one type of agency. Of the 1,502 reports made, 491 (33%) were reported to *law enforcement*, 547 (36%) were reported to a *rape crisis center*, 252 (17%) to an *ER or SANE*, 145 (10%) to a *social service agency*, and 67 (4%) to *other* agencies not specified. See **Figure 36**.

The 33% of reports made to *law enforcement* mirrors the 33% reported nationally (Bureau of Justice Statistics, 1997). However, this data may be skewed as those survivors who seek treatment for sexual assault may be more likely to report than those survivors who do not seek treatment.

There were 1,146 cases that documented both, whether a *report was made* and the *ethnicity/race of the survivor*. *Black* survivors (39%) had the greatest percentage of unreported sexual assaults, followed closely by *White (non-Hispanic)* survivors (35%) and survivors of *mixed race/ethnicity* (30%). *Native American* survivors (16%) had the fewest unreported sexual assaults. See **Figure 37**.

10. Medical Treatment Sought

There were 957 sexual assault offenses that documented whether medical treatment was sought by the survivor. Of these, 39% (375) *sought medical treatment*. There were 935 reports that documented *medical treatment sought* and *survivor gender*. Less than half (42%) of *female* sexual assault survivors and less than one-quarter (22%) of *male* sexual assault survivors *sought medical treatment*.

An examination of medical treatment sought by *survivor age* revealed that *adult survivors* (ages 18 and older) were most likely to seek medical treatment (55%), followed by *adolescent survivors* (36%), *child survivors 0-5 years* (26%), and *child survivors ages 6-12 years* (10%). See **Figure 38**.

An examination of *medical treatment sought* by *survivor ethnicity*, revealed that 58% of *Native American* survivors sought medical treatment. This represents the ethnic group/race with the greatest proportion of survivors seeking medical treatment. Half of *Black* survivors (50%) and 42% of *Hispanic* survivors sought medical treatment. Approximately one-third of survivors of *mixed race/ethnicity* (35%) and *White (non-Hispanic)* survivors (33%) sought medical treatment. See **Figure 39**.

11. Rape Kit Evidence Collection

There were 1,083 service provider reports that documented whether *rape kit evidence was collected* (within 5 days of the assault). Of these, 37% (398) reported rape kit evidence collection. When examined by *gender*, significantly more *female survivors* (40%) obtained rape kit evidence collection, than *male survivors* (18%)

An examination of *rape kit evidence collection* (within 5 days of the assault) by *survivor ethnicity/race* revealed that *Native American survivors* (65%) were significantly more likely to have rape kit evidence collected, than survivors of any other race/ethnic group: *Black survivors* (48%), *Hispanic survivors* (40%), *White (non-Hispanic) survivors* (34%) and survivors of *mixed race/ethnicity* (27%). However, with so few *Black survivors* (21) this finding on *Black survivors* seeking rape kit evidence collection should be viewed with caution. See **Figure 40**.

An analysis was conducted to compare *rape kit evidence collection* among male and female *rape victims* by *gender* and *age*. Significantly more male (53%) and female (41%) *adult rape victims* (age 18 and older) obtained rape kit evidence collection than male and female rape victims of other age groups. Among adolescent survivors, females (44%), than males (5%) were almost 9 times more likely to obtain rape kit evidence collection. See **Figure 41**.

IV. SEXUAL ASSAULT NURSE EXAMINER (SANE) PROGRAMS

A. OVERVIEW OF SEXUAL ASSAULT NURSE EXAMINERS (SANE)

The purpose of a SANE program is to provide medical treatment to sexual assault victims of all ages and genders. The value of a SANE program is the use of advanced trained nurses who provide prompt, professional medical treatment and care in a private setting, objectively document injuries using special equipment, ensure that evidence is collected properly and backed by chain of custody, and provide quality testimony through legal proceedings – all at no cost to the victim.

All New Mexico SANE Programs use the New Mexico Sexual Assault Evidence Kit (SAEK) within five (5) days of an assault. Overarching principles of SANE include patient confidentiality and informed consent. SANE services are presented as options so that the patient has control over what happens. For example, services offered by SANE programs may include comfort care, medications to prevent sexually transmitted diseases, emergency contraception, evidence collection, documentation and photography of injuries, and referrals for aftermath care. One distinct advantage of the SANE response is its physical environment. SANE units offer a safe, private and quiet environment where the sexual assault victim can influence the pace of the exam and has the time to have services presented as options, both of which are effective tools in re-powering the patient.

One key component of any SANE exam is collaboration with co-responding partners. A coordinated or multi-disciplinary team approach recognizes the dual purpose of the sexual assault exam to address the patient needs and the justice system needs. In New Mexico, every SANE unit actively coordinates with law enforcement, district attorney offices, crime lab, and crisis services/advocacy. See **Appendix J** for a list of statewide SANE Programs.

The standardized individualized data collection form used by SANE Programs is found in **Appendix K**. The data analyzed for this report covers the 12-month period 1/1/07 to 12/31/07.

B. SANE PROGRAM FINDINGS

There were 1,044 patients served by SANE Programs in 2007. As expected, most (43% or 445) of all SANE patients were served by the *Albuquerque SANE Collaborative*, followed by the *Santa Fe St. Vincent SANE Program* 20% (205). The number of patients served by each SANE Program is found in **Table 8**.

1. Patient Gender

Of all the patients served by SANE Programs in 2007, 92% (956) were females.

2. Patient Age

There were 1,044 records documenting *patient age*. Most (53%) patients served were *adults* (ages 18 and older). *Adolescents* (ages 13-17) comprised 22% of all patients served. *Children* (ages 12 and under) comprised 25% of all patients served. When examined by *gender*, most (56%) *male* SANE patients were *children*, while most *female* SANE patients (54%) were *adults*. See **Figure 42**.

3. Patient Ethnicity/Race

Of 1,037 records documenting *patient ethnicity/race*, 46% were *Hispanic*, 28% *White (non-Hispanic)*, 15% *Native American*, 3% *Black*, 6% *mixed ethnicity/race*, and 2% *Other*. All races/ethnicities, save *White (non-Hispanics)* are more represented among SANE sexual assault patients than in the general population. See **Figure 43**.

When ethnicity/race was examined by age of the SANE patient, more (51%) *Hispanic* patients and patients of mixed ethnicity/race (60%) were *children* (12 and under) and *adolescents*, while more *White (non-Hispanic)* patients (60%), *Black* patients (59%), *Native American* patients (55%) and patients of *other race/ethnicity* (91%) were *adults* (age 18 and older). See **Figure 44**.

4. Patient Disability

Patient disability was known/documented in 1,044 SANE reports. Of these, 21.5% (225) had a disability. More male (26%) than female SANE patients (21%) had a disability. Most sexual assault patients with a disability were adults (18 and older) (73%). This was true for male (67%) and female (73%) victims with a disability.

Of the 225 patients with a disability, 213 documented the type of disability. Almost two-thirds (62% or 133) had a *mental/cognitive* disability, 23% (50) an unspecified *physical* disability, 18% (38) a *visual* disability, 4% (8) a *hearing* disability and 24% (52) reported *other* unspecified impairment. Percents exceed 100 as some patients (57) had more than one disability.

5. Offender Gender and Age

Of 909 individual reports where *gender of the offender* was documented, there was a *male* offender in 895 (98%). The *age of the offender* was documented in 769 of the individual reports submitted. Of these, 84% were *adults* (ages 18 and older), 14% were *adolescents* (ages 13-17) and 2% were *children* (12 and under).

C. OFFENSE CHARACTERISTICS

1. Victim/Offender Relationship

Of 251 SANE *child* patients (ages 12 and under), the victim/offender relationship was documented in 191. Two-thirds (67% or 128) were victimized by a *family member*, 12% (22) by an *acquaintance*, and 4% (7) by a stranger. Sixteen percent (31) of the cases involving children were committed by *others unspecified* and 2% (9) were offended by someone from a *brief encounter*. See **Figure 45**.

By contrast, SANE patients *over age 12* were significantly more likely to be victimized by an *acquaintance* or a *stranger*, than by a *family member*. *Family* offenders comprised 8% of SANE adolescent (ages 13-17) patients and 3% of SANE adult (18 and older) patients. *Stranger* offenders comprised 19% of adolescent SANE patients and 25% of adult SANE patients. *Acquaintance* offenders comprised 38% of adolescent SANE patients and 34% of adult SANE patients. Twelve percent of offenders of adolescent SANE patients and 11% of adult SANE patients were assaulted by someone from a *brief encounter*. Additionally, 5% of adult SANE

patients were assaulted by an *intimate partner* and 9% by an *ex-intimate partner*. Similarly, 3% of adolescent SANE patients were assaulted by an *intimate partner* and 4% by an *ex-intimate partner*. See **Figure 46**.

2. Number of Offenders

Of 866 reports that documented the number of offenders per sexual assault, 727 (84%) sexual assaults were perpetrated by *one* offender, 90 (10%) by *two* offenders, 26 (3%) by *three* offenders, and 23 (3%) by *four or more* offenders.

3. Type of Coercion

The *type of coercion* used was examined by *victim age* for 635 patients. In 87 cases involving *child* SANE patients (ages 12 and under), most (46%) were coerced by *physical intimidation*, followed by *physical force* (42%), and *verbal threat* (16%). See **Figure 47**.

In 156 cases involving *adolescent patients* (ages 13-17), most (49%) were coerced by *physical force*, followed by *physical intimidation* and *verbal threat* (29%, respectively) and *alcohol/drugs* (20%). Refer to Figure 47.

In 392 cases involving *adult patients* (18 and older) most (55%) were coerced by *physical force*, followed by *verbal threat* (39.5%), *physical intimidation* (27%) and *alcohol/drugs* (12%). Refer to Figure 47.

Weapons of all types were used most on *adult* SANE patients (18 and older): *knives* (8%), *firearms* (5%) and *other unspecified weapons* (6%). See **Figure 48**.

The type of coercion used on *adolescent* and *adult* SANE patients was examined by *offender relationship to the victim*, either *family*, *other known offender* or *stranger*. Eight percent of offenses committed by *strangers* involved a *knife*, compared to 5% of those committed by

family and 3% of those committed by *other known offenders*. Three percent of *family* offenders used *firearms* during their offenses. *Strangers* used *firearms* in 6% of cases, while *other known offenders* used *firearms* in 2% of cases. More *other known* offenders used *physical force* (32%) compared to *family* offenders (26%) and *stranger* offenders (28%). Conversely, more sexual offenses committed by a *family member* involved *physical intimidation* (19%) compared to 13% of those committed by a *stranger* and 17% committed by *other known offenders*. Interestingly, *other known* offenders used *alcohol/drugs* in their sexual offenses at almost twice the rate (9%) as *strangers* (4%) and *family members* (5%). See **Figure 49**.

4. Location of Sexual Offenses

Eighty-seven percent of SANE *child* patients (12 and under) were victimized in someone's residence: 44% were victimized in the *victim's home*; over one-third (36%) in the *offender's home*; and 7% in some *other residence* (babysitter's, foster parent's or friend's). Additionally, 3% were victimized at *school*, 2% in a *public building* and 1% at *daycare*. See **Figure 50**.

Most *adolescent* (age 13-17) SANE patients (53%) were victimized in a residence: *own home* (16%), *offender's home* (25%) or *other residence* (12%). Fourteen percent of adolescent

SANE patients were victimized in a *vehicle*, followed by those victimized *outdoors* (6%). An equal proportion of adolescent SANE patients were victimized in a *hotel/motel* as a *public building* (2%, respectively). Less than one-quarter (21%) of adolescent SANE patients were victimized in *other* unspecified locations. Refer to Figure 50.

Over half (58%) of *adult* (18 and older) SANE patients were victimized in a residence: *own home* (29%), *offender's home* (22%) or *other residence* (7%). Another 9% were victimized in a *vehicle*. Slightly more were victimized *outdoors* (5%) than in a *hotel/motel* (4%) and 21% were victimized at *other* unspecified locations. Refer to Figure 50.

5. Patient Injury

Victim injury was observed in 66% (694) of SANE patients. When examined by *age*, victim injury occurred in 78% of *adult* (18 and older) SANE patients, 68% of *adolescent* (ages 13-17) SANE patients, and 40% of SANE *child* patients (ages 12 and under). More child and adolescent SANE patients experienced *vaginal* injuries than any other type of injury: over half (58%) of child SANE patients and three-quarters of adolescent SANE patients incurred vaginal injuries. The proportion of *adult* SANE patients with vaginal injuries (61%) was exceeded only by the proportion of adult SANE patients with injuries to *body extremities* (63%). See **Figure 51**. One-quarter of *child* SANE patients, 20% of *adult* SANE patients and 13% of *adolescent* SANE patients had *rectal* injuries. More *adult* SANE patients suffered *head, neck, and torso* injuries than *adolescent* and *child* SANE patients: half of adult SANE patients experienced *head and neck* injuries (51%) and *body torso* injuries (50%). *Adult* victims also experienced *strangulation* (14%) in a significantly greater proportion than *adolescent* (3%) and *child* (2%) victims. Refer to Figure 51.

D. SANE PROGRAMS SERVICE CHARACTERISTICS

1. Referral Source

Referral sources were documented for 1,018 SANE patients. Most referrals for victims of all ages came from *law enforcement*: *adults* (18 and older) 44%, *adolescents* (13-17) 48% and *children* (<13) 48%. *Hospitals* comprised the second most referrals for victims of all ages: *adults* (32%), *adolescents* (33%) and *children* (20%). Referral to SANE by a *relative* was significantly

more likely for *children* (8%) and *adolescents* (9%) than for *adult* victims (1%). Conversely, significantly more *adult* victims (15%) and *adolescent* victims (12%) were referred to SANE by *emergency medical services* (EMS) than *child* victims (1%). See **Table 9**.

2. Evidence Collection

A greater proportion of SANE *child* (age 13-17) patients (8%) and *adolescent* (13-17) patients (7%) than *adult* (18 and older) patients (4%), received *no evidence collection*. Slightly more than twice as many *adult* patients (97%) and *adolescent* patients (93%) than *child* patients (39%), completed the *sexual assault evidence kit* (SAEK). See **Figure 52**. Similarly, while most *adult* patients (71%) and *adolescent* patients (66%) had *clothes collected* for forensic evidence, only 22% of *child* patients had their clothes collected. A great proportion of SANE patients of all ages had *photos taken* as a part of evidence collection: 89% of *adults*, 88% of *adolescents* and 97% of *children*. Very few SANE patients of any age had *blood collected*: 6% *adult* patients, 10% *adolescent* patients and 3% *child* patients. *Adult* patients (24%) and *adolescent* patients (30%) were significantly more likely to have *urine evidence* collected than *child* patients (5%). Refer to Figure 52.

3. Assessment Services

While all *adult* (ages 18 and older) and *adolescent* (13-17) SANE patients received *assessment services*, 2% of *child* patients (ages 12 and under) did *not* receive assessment services. *Treatment of sexually transmitted diseases* was the service conducted most on *adult* patients (90%) and *adolescent* patients (87%), while *physical assessment/medical exam* was the service most conducted on *child* patients (98%). See **Figure 53**. *Psychological/suicide assessment* was conducted on a small proportion of SANE patients of all ages: 8% *adults*, 4% *adolescents* and 1% *children*. Significantly more *adolescent* patients received *pregnancy prevention/emergency contraception services* (81%) than *adult* patients (66%), and 2% of *child* patients received this service, as well. Refer to Figure 53.

4. Reports to Law Enforcement

Of 1,029 SANE patients, 809 (79%) cases were reported to police at the time of the SANE exams.

5. SANE Referrals to Other Services

Sometimes during and after SANE services are provided, the patient is also referred to other services for assistance beyond the scope of SANE Programs. There were 1,007 patients who received referrals to other services. Overall, almost three-quarters (74%) were referred to *rape crisis centers*. Less than one-quarter (20%) were referred to *law enforcement* and slightly over one-quarter (29%) were referred to *community mental health centers*. One-quarter (24%) of patients were referred to *other services*, such as health services (primary healthcare providers, specialty healthcare providers, medical clinics, SANE follow-ups), CYFD and advocacy services (domestic violence advocates, therapists, forensic interviewers).

When examined by *patient age*, significantly more *child* patients (ages 12 and under) were referred to *law enforcement* (35%), than *adolescent* (ages 13-17) patients (22%) or *adult* (18 and older) patients (13%). Similarly, significantly more *child* patients were referred to *community mental health centers* (48%), than *adolescent* (29%) or *adult* (20%) patients. While patients of all ages were referred to *rape crisis centers*, *adult* patients (89%) and *adolescent* patients (78%) were referred approximately two times more often than *child* patients (36%); and 12% of *child* patients and 2% of *adolescent* patients were referred to CYFD. See **Figure 54**.

6. Patient County of Residence

The patient's county of residence was documented for 810 of 1,044 SANE patients. As expected, most SANE patients (24%) reside in *Bernalillo County*, followed by *Santa Fe County* (13%) and *San Juan* and *Dona Ana* counties with 11%, respectively. See **Table 10**.

SECTION TWO: IMPLICATIONS OF THE FINDINGS

The rape of children and adolescents in New Mexico is disproportionate among rape victims and must be a primary focus of sexual assault prevention, identification, investigation, and prosecution efforts. Findings from the Survey of Violence Victimization in New Mexico (SVV), law enforcement, service providers, and SANE Programs demonstrate that victims of sex crimes are overwhelmingly female and are most often victimized by age 12. Even when males are sexual assault victims, most are also victimized by age 12. When one considers that parents and step-parents, and other family members are responsible for much of this abuse, it is imperative that parents, guardians and extended family be targeted for prevention education and outreach, to compliment the training of other professionals (teachers, clergy, law enforcement, and judges) who must respond to a suspected sexual abuse of a child or a child's disclosure of sexual abuse.

The negative effects of sexual violation during childhood cannot be overstated. To be sure, sexual assault during childhood is a precursor to experiencing a sexual assault in the future. Over half (58%) of all those who sought assistance for a sexual assault in the year 2007, had experienced a prior sexual assault. Further, while sexual abuse prevention instruction is recommended for students throughout elementary school, when developmentally appropriate, a necessary component of such education must address the shocking reality that children who are sexually abused are at greater risk of becoming pregnant as a teen, than children who are not sexually abused. Education on self-esteem, self-respect, components for healthy relationships and normal sexual developmental must be addressed to reduce the likelihood of early pregnancy among sexually violated children.

Fifteen percent of service provider sexual assault cases and 8% of law enforcement reported sexual assaults involve a *stranger* offender. SANE Programs reported 19% of their *adolescent* sexual assault patients and 25% of their *adult* sexual assault patients were offended by a *stranger*. Similarly, a significant proportion of *known offenders* as reported by service providers (39%) and law enforcement (30%) were related to the victims, while SANE Programs reported only 8% of their sexual assault patients were related to their offender. These findings suggest that sexual assault victims who are victimized by a *stranger* are more likely to seek medical services and forensic documentation of their victimizations; and that victims who are victimized by a *relative* are less likely to seek medical services and forensic documentation regarding their victimization. By extension, this means that successful prosecution of sexual assaults perpetrated by family members is less likely, and victims of these sex crimes are less likely to access needed services. Since family members comprise a disproportionate number of all perpetrators of reported sexual assaults in our state, it is imperative to provide education and outreach in schools and communities to inform those at risk about services available to them.

Sexual victimizations of adolescents and adults more often involved a gun, knife and intentional drugging than sexual victimizations of children. Adolescents and young adults are vulnerable to date rape and rape by new and/or social acquaintances. Further, alcohol and drug use is associated with a greater vulnerability to stranger rape, multiple offender rape, and the contraction of a sexually transmitted disease. These findings have implications for personal safety instruction and alcohol and drug prevention education programs for high school students.

One-quarter of victims who sought assistance for a sexual assault had some type of disability before the sexual assault. Most of these victims were mentally/emotionally disabled. This speaks to the need for education programs to promote greater awareness among families and communities regarding the vulnerability of their residents with disabilities to being sexually

assaulted; and the need for sexuality education and personal safety for individuals with disabilities.

Only one-third (33%) of sex crimes that came to the attention of service providers were reported to law enforcement. Additionally, over 16% of adult victims, 15% of adolescent victims and 9% of child victims in the SVV reported their victimizations to law enforcement. There are several implications: 1) training for healthcare providers to effectively respond to patient disclosures of sexual assault; 2) training of law enforcement officers to respond with sensitivity to the needs of sexual assault victims and initiate advocacy for the victim; and 3) accessible legal advocacy to assist victims through the legal process.

Survivors with a history of domestic violence were two times more likely to be sexually assaulted by someone with a history of domestic violence than survivors who were not exposed to domestic violence in their past. Experiencing domestic violence as a child increases one's vulnerability to abuse and sexual assault as an adult. This finding implies that greater efforts should be made by those in law enforcement and in collaboration with those in the helping professions to identify children from violent homes and provide appropriate counseling services.

Law enforcement reported that 27% of criminal sexual penetration cases and 8% on non-CSP sex crimes involved injury to the victim. Conversely, SANE practitioners found that 66% of their sexual assault patients incurred one or more injuries during their assault. The reasons for the great disparity in injury reporting between law enforcement and SANE practitioners can be explained in part, by the fact that SANE practitioners are specifically trained to identify and document sexual assault injuries; and beyond observable injuries to the head/neck or extremities of the victim, law enforcement officers are not likely to detect injury. Secondly, sexual assault victims who believe they are injured may be more likely to seek SANE services than sexual assault victims who do not believe they are injured. Therefore, SANE Programs would naturally have a higher rate of victims who experienced injury. All this said, there may be an implication for officer training regarding victim injury in sexual assaults and a more accurate way to report injury on law enforcement offense incident reports.

SEX CRIMES IN NEW MEXICO VII:

**An Analysis of 2007 Data from The New Mexico
Interpersonal Violence Data Central Repository**

APPENDICES

Appendix A. Survey of Violence Victimization Summary

I. INTRODUCTION

Nationally, victimization surveys such as the National Crime Victims Survey and the National Violence Against Women Survey demonstrate more comprehensive reporting of crimes, and in particular, interpersonal violence crimes than those which are reported to law enforcement. While New Mexico law enforcement agencies have reported their incidents of domestic violence, intimate partner violence, stalking and sexual assault to the Central Repository, determining the rates of these crimes that were *never* reported to law enforcement was not possible. The long term goal to rectify this problem and make possible more accurate estimates of the prevalence and incidence of interpersonal violence in New Mexico was to conduct our own statewide victimization survey. To this end, in 2005 the Survey of Violence Victimization in New Mexico (SVV) was conducted, asking 2000 adult men and 2000 adult women about their experiences of violence. While all data captured from this survey will be analyzed over the course of time, several discouraging realities are clear from the preliminary findings of this survey:

1. The rate of sexual assault (rape and attempted rape) in New Mexico is staggering; and higher than national comparable rates found in the National Violence Against Women Survey (NVAWS), the most comprehensive victimization survey to date;
2. Rape is significantly under-reported to law enforcement;
3. There are significantly more victims of sexual assault than ever identified by law enforcement or service providers statewide, especially in the case of incapacitated rape;
4. There are significant co-morbidity and healthcare utilization issues associated with interpersonal violence; and
5. There are significant differences between males and females in the experience and outcomes of sexual assault crimes.

This summary discusses selected findings regarding rape among males and females from the Survey of Violence Victimization in New Mexico, together with selected findings on child sexual abuse derived from statewide law enforcement and service provider data submitted to the New Mexico Interpersonal Violence Data Central Repository in 2005.

II. RAPE AMONG MALES

A. Prevalence and Incidence

In the Survey of Violence Victimization in New Mexico, 5% or 1 in 20 adult males (18 and older) reported being the victim of rape or attempted rape in their lifetime compared to 3% nationally (NVAWS); 4% or 1 in 25 the victim of a *completed* rape. In 2005, there were 2,773 male victims of rape or attempted rape, 1,162 of these a completed rape.

B. The Circumstances of Male Rape

While female and male adolescents and young adults have similar rates of rape, over half (53%) of male rape victims were raped as children (ages <13) compared to 44% of females who were raped as children.

Although fewer males (1 in 40) are the victims of incapacitated rape (unwanted, non-consensual sex while very high, drunk or passed out) compared to females (1 in 12), males (43%) are significantly more likely than females (29%) to experience their incapacitated rapes as an adult.

The rape experience for males includes a greater likelihood of *being hit with an object* (10%) and having a *knife or other weapon used on them* (7%) compared to females (7% and 4%, respectively). Additionally, more *male* victims of rape use *alcohol* (28%), *drugs* (2%) or *both* (4%) at the time of the incident than *female* rape victims (18%, 1% and 2%, respectively).

When it comes to rape, males like females, experience rape most often (85%) at the hands of a male assailant.

C. Male Rape Outcomes

Fewer male rape victims reported being injured during their rape incidents (16%) compared to female rape victims (27%), and just under one-third (30%) of these obtained medical care for their injuries. However, male victims of rape are two times more likely than male *non-victims* to suffer from a *serious disabling injury* in their lives and seven times more likely to suffer *one or more chronic mental health conditions*.

Only 6% of male rape victims reported their rapes to police. Three quarters (74%) of male rape victims reported being *dissatisfied* with police response to their reported rapes, two-thirds of these, *very dissatisfied*. Most male rape victims do not report to police because they consider the rape to be *too minor or not a crime* (19%); they *fear the offender* (13%); or will *handle the situation themselves* (12%). Six times more males than females report that they *want the police to take their complaint more seriously, believe them and not laugh at them*.

Male rape victims who report their rape to police are significantly more likely (47%) than female rape victims (37%) to have an officer *arrest the offender or take him/her into custody*. However, since only 6% of males report their victimization to police, this means that only 3% of all cases of male rape result in a suspect arrest. To make matters worse, male victims of rape are only half as likely as female victims to be *referred to services*, such as victim assistance, a medical clinic, legal aid or a shelter.

Only 3% of male rape victims obtained a restraining order against their offender and half (52%) of these were violated by the offender. A mere 1% of male rape victims filed criminal charges against their offender. This low number of criminal charges filed by male rape victims prohibited the examination of gender differences in rape case dispositions.

III. RAPE AMONG FEMALES

A. Prevalence and Incidence

As reported by adults 18 and older in the statewide victimization survey, 24% or 1 in 4 females are the victims of rape or attempted rape sometime in their lifetime compared to 18% (17.6%) nationally (NVAWS); 21% or 1 in 5 females the victim of a *completed* rape. In 2005, there were 5,224 female victims of rape and attempted rape, 4,158 of these, the victims of a completed rape.

Of all rapes reported by the survey respondents, 43% were incapacitated rapes. Female rape victims (8.5%) were three times more likely than male victims (2.5%) to experience incapacitated rape. Similar to male victims of incapacitated rape, most female victims are adolescents (39%), but unlike the rate for incapacitated rape of male children (17%), a significantly greater proportion of female victims of incapacitated rape (31%) have their experience as a child (ages <13).

B. The Circumstances of Female Rape

Forty-four percent of female rape victims were raped as children (ages <13), one-quarter (24%) as adolescents (ages 13-18) and one-third (34%) as adults. Eighty-six percent of female rape victims were raped by a male.

More female victims of rape, than males, reported being physically attacked: *pushed, grabbed or shoved* (44.5% vs. 37%); had their *hair pulled* (16% vs. 11%); were *choked or had an attempted drowning* (10% vs. 6%) and were *beat up* (14% vs. 9%). Similarly, twice as many female rape victims (32%) than male victims (16%) reported that their offenders *threatened to harm or kill them or someone close to them*; and nearly twice as many female rape victims (40%) than male victims (22%), *believed* that they or someone close to them would be seriously harmed or killed by their offenders.

C. Female Rape Outcomes

Slightly over one-quarter (27%) of female rape victims were injured during their rape incidents and one-third (34%) obtained medical care for their injuries. Like male rape victims, female rape victims are two times more likely than female *non-victims* to suffer from a *serious disabling injury* in their lives and six times more likely to suffer from *one or more chronic mental health conditions*.

Although a dismally low rate, female rape victims (19%) are three times more likely to report their incidents to police than male rape victims (6%). Most female rape victims who do not report to police say it is because they *were too young/a child* (17%); *feared the offender/afraid offender would get even* (17%); and *felt shame/embarrassment or thought it was their fault* (15.5%).

Twice as many female rape victims (33%), than male victims (16%) were *referred to services* (victim assistance, medical clinic, legal aid or shelter). Females were also significantly more likely than male rape victims to *have an officer see them in person* (67% vs. 53%) and *be referred to court or a prosecutor's office* (20% vs. 16%). However, female rape victims (13%)

were significantly more likely than male rape victims (8%) for *the police to do nothing* in response to a rape report.

Slightly over one-third (37%) of female rape victims' cases that were reported to police resulted in a suspect arrest. Since 19% of female rape victims reported their rape to police, this represents only 7% of all cases of female rape.

About half (49%) of female rape victims reported being *dissatisfied* with police response to their reported rape, over one-third of those, *very dissatisfied*. Most (19%) victims wanted the police to charge/arrest the offender or keep him/her locked up. Others (13%) wanted the police to *take a report, follow through with an investigation and question the offender*.

Three times as many female (11%) as male (3%) rape victims obtained a restraining order; and similar to male victims, about half (49%) were violated by the offender.

Seven percent of female rape victims *filed criminal charges against the offender*. One-quarter (25%) of the rape victims that filed criminal charges reported that their *charges were dropped*; 6% reported that the *offender was acquitted*; 45% reported that the *offender was convicted*; and 11% reported that the *offender entered a guilty plea*. Of those that were convicted or pled guilty, 88% were *sentenced to jail or prison* and the *average sentence* was 62.5 months. However, over half (54%) of the guilty offenders were sentenced to 48 months or less.

IV. SELECTED CHILD SEXUAL ABUSE FINDINGS

There were 1,545 victims of sexual assault who sought services from rape crises and mental health centers across New Mexico in 2005. Both, the *gender of the victim* and the *type of sexual offense* were documented in 1,241 of these cases.

There were 91 males and 362 females who were victims of *non-penetration* sex crimes that were reported to rape crisis and mental health centers in 2005. Of these, almost three-quarters (70%) of the males and over half (56%) of the females were children (ages 12 and under).

Similarly, there were 89 males and 699 females who were victims of *rape* that were reported to rape crisis and mental health centers in 2005. Of these, two-thirds (68%) of the males, and one-quarter (25%) of the females were children (ages 12 and under). In a trend analysis from 2002-2005, an average of 41% of the rapes reported to law enforcement were perpetrated upon those 12 and under. Over the same four years, an average of 31% of rapes was perpetrated upon *adults* and an average of 28% of rapes was perpetrated upon *teens* (ages 13-18).

There is a significant difference in ethnicity/race among child rape victims by gender. Over two-thirds (68%) of male rape victims 12 and under were *Hispanic*, followed by 14% *White (non-Hispanic)*, 12% *mixed ethnicity/race*, 5% *Native American*, and 2% *Black*. Among female rape victims 12 and under, 49% were *Hispanic*, 35% *White (non-Hispanic)*, 8% *mixed ethnicity/race*, 5% *Native American*, and 3% *Black*.

Of 172 female rape victims 12 and under who went for help in 2005, *prior sexual abuse* was documented on 121. Of these, 47% (57) were sexually abused prior to the most recent rape. Similarly, of 60 male rape victims 12 and under who went for help in 2005, *prior sexual abuse* was documented on 46. Of these, 43% (20) were sexually abused prior to the most recent rape.

While children 12 and under are the largest group of rape *victims* among those who went for help, adults (age 19 and older) comprised the largest group (73%) of rape *offenders*. Among these rape victims under 13 years old, only 2% were raped by a *stranger*. Of the 98% of child rapes perpetrated by someone known to the child, over three-quarters (77%) were raped by a *family member* and 21% raped by other *known offenders*. *Fathers* comprised the largest group of child rapists (30%), followed by *uncles* (15%), *cousins* (14%), *brothers* (12%) and *step-fathers* (9%). Among known *non-relative* rapists of children under 13 years of age, *friends* comprised the largest group (24%), followed by the *mom's boyfriend* (10%), *babysitters* (8%), *social acquaintances* (8%) and *teachers* (6%).

There is no difference in the rate of *incest* by gender among child rape victims. There were 171 female child rape victims who went for help in 2005 and documented the relationship of the perpetrator. Of these 76% (130) were victims of incest. Similarly, there were 60 male child rape victims who went for help in 2005 and documented the relationship of the perpetrator. Of these 75% (45) were victims of incest.

While one-third (35%) of male victims of sexual assault go for services within the first year of the assault, an analysis of sex crimes data from 2002 – 2005, found that males wait an average of 12.5 years after their sexual assault before seeking therapeutic services. Similarly, while 46% of female victims go for services within the first year of the sexual assault, females wait an average 9.4 years.

V. IMPLICATIONS OF THE FINDINGS

A. Implications for Prevention

When only 6% males and 19% females report their rapes to law enforcement, there needs to be a concerted effort to better identify rape victims by focusing on *why* they do not report. There are significant gender differences in why victims do not report. Most males in the statewide survey did not report because they considered the rape to be *too minor or not a crime*, while females *feared their offender or felt shame*. These differences must be taken into consideration for successful prevention education.

Perhaps one of the most startling findings from the statewide victimization survey was the proportion of incapacitated rapes among females and the proportion of these experienced as children. Of all rapes among females, 8.5% were incapacitated rapes; and unlike males, who most experienced incapacitated rapes as adults (43%) and adolescents (40%), female victims experienced incapacitated rapes most as adolescents (39%) and children (31%). Adult females experienced 29% of the incapacitated rapes. Interventions focused on preventing incapacitated rape should be a primary goal among statewide prevention programs.

If prevention efforts could dramatically reduce the number of females who perpetrate sexual offenses, the *reduction* in the number of victims and incidents of sexual assault would be negligible. All sources of data examined for this report demonstrate the overwhelming reality that males perpetrate rapes: law enforcement incidents (93%); service provider's cases (97%); SANE cases (97%) and survey findings (85%). Even when males are the rape victims, males are also the perpetrators 85% of the time. Until more prevention programs target males as the focus of their interventions, little will be accomplished to reduce the incidence of rape and sex crimes, overall.

Similarly, much prevention is focused on children because children comprise so many of those victimized: 44% of the rape victims identified in the statewide survey; 33% of rape victims identified by law enforcement and 49% of rape victims identified by service providers. However, these same sources of data reveal that rape *offenders* are overwhelmingly *adults* (law enforcement 78%, service providers 84%, and SANE units 84%). Children have little power to counter the sophisticated coercion techniques, verbal threats, physical intimidation and physical force of adult offenders. Therefore, more prevention should be focused on working with *adults*, and especially *male adults*, to stop sexual assault and abuse.

What is it that makes *male Hispanic children* (68%) dramatically more susceptible to rape compared to male children of other races/ethnicities? The prevention implication is unclear but the need to study this issue is most evident.

Who are the primary perpetrators of the sexual abuse of children? They are family members, chiefly their fathers, step-fathers, uncles, cousins and brothers. Prevention programs should be two-fold: 1) prevention aimed at helping a child guard against family members as perpetrators and what to do in the event of sexual abuse by a family member; and 2) prevention aimed at helping the family members examine their own sexual behaviors and boundaries, identify healthy and unhealthy sexual behaviors/practices by relatives (and others that their children may come into contact with), learn how to protect their children from sexual abuse by relatives (and others) and access available resources.

B. Implications for Law Enforcement

The statewide survey identified 5,320 rape victims in 2005. In the same time period, law enforcement reported 1400 rape incidents. An explanation for the disparity in identifying rape incidents is the scope of rape (penetration) crimes captured. While the survey captured many forms of criminal sexual penetration and incapacitated rape, law enforcement codes restrict the types of penetration crimes captured and do not capture incidents of incapacitated rape, a type of rape that comprised 43% of the rapes identified by the survey. To this end, much consideration should be made by law enforcement and the FBI which guides law enforcement, to expand the types of criminal sexual penetration captured to include more types of penetration, especially incapacitated rape.

Both male and female rape victims from the statewide survey reported being *dissatisfied*, most *very dissatisfied* with the law enforcement response to their complaint. The most common reason given for their dissatisfaction was that they wanted the police to *charge/arrest the offender* or *keep the offender locked up* (18%) and to *take a report and follow through with an investigation, to question the offender* (13%). When victim dissatisfaction was examined by gender of the victim, there were dramatically more very dissatisfied males (66%) compared to females (38%). The implications are unclear. Perhaps this is more a matter of policy change, regarding officer response to alleged rape victims rather than the actions of individual officers. Perhaps it is a matter of officer sensitivity training responding to male complaints of rape. Finally, perhaps there is an implication for the role of victim advocacy and an examination of protocol for referral of rape victims by responding officers to advocacy services.

C. Implications for Healthcare

Slightly over one-quarter of rape victims (29%) are injured during their rape incidents, and approximately one-third of these go for medical treatment. Sexual Assault Nurse Examiner units capture information regarding sexual assault patients that present to their facilities and offer

forensic evidence collection and sometimes a physical exam. However, no standardized monitoring system currently exists to reliably document the number of rape victims that go to emergency departments or doctor's offices as a result of a sexual assault. Further, twice as many rape victims as non-victims suffer from serious disabling injury and approximately six times as many rape victims as non-victims suffer from one or more chronic mental health conditions. Without identifying these patients, it is impossible to determine healthcare utilization due to sexual assault or to more effectively treat these patients by offering them appropriate referral services. The implication to improve public health is to consider the need for universal screening for lifetime exposure to sexual assault and other forms of violence.

APPENDIX B. Summary: Sexual Abuse of Children and Youth in New Mexico

A. Highlights on Child Rape Victimization

- ▶ From 2002-2006, children comprised an average of 41% of law enforcement reported sexual assaults. Over the same time period, half of the sexual assault victims of all ages that sought therapeutic services in New Mexico were victimized as children.
- ▶ The rate of rape among children and adolescents in New Mexico (66%) found in the *Survey of Violence Victimization in New Mexico* (SVV) is significantly higher than that found nationally (54%), as reported in the National Violence Against Women Survey (NVAWS).
- ▶ Almost three-quarters (72%) of those abused as children were victims of ongoing or serial abuse rather than a single incident of rape. (Unfortunately, ongoing sexual abuse is a problem for one-third of *female adolescent* rape victims, as well).
- ▶ Data provided by statewide service providers are consistent with the SVV finding that only 3% of child rape cases are perpetrated by a *stranger*. *Relatives* rape children at almost twice the rate of other *known* offenders, as reported by the SVV and almost three times the rate as reported by statewide service providers. The worst offenders by far, are *fathers* (22%); and service providers report fathers commit rape at almost twice the rate as *uncles* (12%) who commit the second highest rate of child rapes.
- ▶ Most child rape, (81% [service providers] and 93% [SVV]) is perpetrated by *one* offender, who is *male* (97% [service providers] and 95% [SVV]) and of the *same ethnicity* as the victim, 86% (SVV).
- ▶ Findings from the SVV revealed that 40% of child rape cases involved physical assault of the victim, as well, mostly in the form of *grabbing and pushing* (27.5%) and *slapping or hitting* (16%). However, 4% respectively, of child rape victims were *choked or victims of an attempted drowning, threatened with a gun, and threatened with a knife or other weapon*.
- ▶ The SVV reported that almost one-quarter (22%) of child rape victims were physically injured during their sexual assault and 4% received medical treatment for their injuries. Reports from statewide service providers found that one-third (31%) of those who sought services for child rape sought medical treatment as a result of their victimization.
- ▶ Of 972 sexual assault victims that sought Sexual Assault Nurse Examiner (SANE) services in 2006, nearly one-quarter (23%) were children. One-third (35%) of child SANE patients incurred injuries in conjunction with their sexual assaults. *Vaginal* (60%) and *rectal* (34%) injuries comprised the injuries most incurred by child SANE patients. Indeed more *rectal* injuries were observed among child victims than among victims of any other age group. Additionally, 15% of child patient injuries were *body torso* injuries, 10% were *head and neck* injuries and 2% were injuries from *strangulation*.
- ▶ Service provider reports demonstrate that victim vulnerability and access make children prime targets for sexual victimization. Most child rape offenders are adults (73%) and most often use *manipulation* (37%), *physical force* (31%) and *verbal threat* (30%) to facilitate the rape of children. Over one-third (39.5%) of child rape victims were threatened by the offender that they or someone close to them would be *harmed or killed*; and nearly half (48%) of the child rape

victims *believed* their offender would carry out their threat. Most often female children were victimized in their *own homes* (56%), while male children were victimized in the *offenders' homes* (42%). While the reasons are unclear, more male children (15%), than female children (3%) were victimized in *multiple locations*. Perhaps most egregious in their assault of the vulnerable, is that 17% of the children chosen by their offenders to be victimized were children with a mental, emotional or physical disability.

► Reports from statewide service providers reveal that 2% of child rape cases resulted in the contraction of a sexually transmitted disease, and 1% of child rape victims became pregnant as a result of the victimization. More disturbing however, is that 18% of females raped as children became pregnant during adolescence (before the age of 18), unrelated to a sexual victimization.

► Nationally, only 16% of rape victims reported their victimization to law enforcement (NVAWS). In New Mexico, 17% of rape victims reported their victimization to statewide law enforcement agencies (SVV). As poor as these reporting rates are, when examined by age of respondent at the time of their victimization, only 9% of those raped as children reported their rape to law enforcement. Perhaps not surprisingly, criminal charges were filed in only 9% of child rape cases.

B. Highlights on Adolescent Rape Victimization

► One-quarter (27%, respectively) of law enforcement reported and service provider reported sexual assaults of all types were perpetrated upon adolescents (ages 13-17). Of these, significantly more female victims (28%) than male victims (19%) were victimized as adolescents. In *criminal sexual penetration* crimes however, only slightly more female victims (28%) than male victims (26%) were victimized as *adolescents*. Similarly, adolescents comprised one-quarter (24%) of SANE patients treated.

► Slightly over one-quarter of those sexually abused as adolescents were victims on *on-going* abuse. However, when examined by gender, it is clear that on-going abuse among adolescents is largely a problem for *female* victims, as 32% of *female* adolescents compared to 1% of *male* adolescents were victims of on-going abuse.

► *Physical force* was the type of coercion used in most adolescent rape victimizations, as reported by service providers, followed by *verbal threats* (21%). An equal proportion of adolescents and adults (6%, respectively) were *intentionally drugged by their offenders*. Similarly, *physical force* was the type of coercion reported most among adolescent SANE patients, but at a significantly higher rate (72%), followed by *physical intimidation* (43%), *verbal threat* (26%) and *alcohol/drug use* (20%).

► Among SANE patients, two-thirds (67%) of adolescent rape victimizations occurred in a residence, one-third of these in the *offenders' home*.

► Rape kit evidence collection differs greatly between male and female adolescent rape victims. Female adolescent rape victims (40%) were twice as likely to have rape kit evidence collected as male adolescent rape victims (20%).

► Ten percent of adolescent rape victimizations were perpetrated by *strangers*. Of the 90% of victimizations by *known offenders*, 49% were perpetrated by an *acquaintance* (other than family, an intimate partner or someone else in their household).

► Forty-percent of adolescent rape victimizations involved *offender* use of alcohol/drugs and 18% involved *victim use* of alcohol/drugs.

► Two-thirds of adolescent rape victimizations involved *physical assault* in addition to the sexual assault: over half (57.5%) were *grabbed and pushed*, approximately one-quarter (23%) were *slapped or hit*, 15% were *beat up* and 12% were *choked or victims of an attempted drowning*. Additionally, 8% were *threatened with a gun* and 11% *threatened with a knife*.

► One- quarter of adolescent rape victims (23%) reported being *physically injured* during their sexual assault incidents and 6% *received medical care* for their injuries.

► Only 15% of adolescent rape victims reported their victimization to law enforcement, 7% obtained a restraining order and 8% resulted in criminal charges being filed.

Appendix C: New Mexico Sex Crime Statutes

Chapter 30

Criminal Offenses

Article 9: Sexual Offenses

30-9-10. Definitions.

As used in Sections 30-9-10 through 30-9-16 NMSA 1978:

A. "force or coercion" means:

- (1) the use of physical force or physical violence;
- (2) the use of threats to use physical violence or physical force against the victim or another when the victim believes that there is a present ability to execute the threats;
- (3) the use of threats, including threats of physical punishment, kidnapping, extortion or retaliation directed against the victim or another when the victim believes that there is an ability to execute the threats;
- (4) the perpetration of criminal sexual penetration or criminal sexual contact when the perpetrator knows or has reason to know that the victim is unconscious, asleep or otherwise physically helpless or suffers from a mental condition that renders the victim incapable of understanding the nature or consequences of the act; or
- (5) the perpetration of criminal sexual penetration or criminal sexual contact by a psychotherapist on his patient, with or without the patient's consent, during the course of psychotherapy or within a period of one year following the termination of psychotherapy;

Physical or verbal resistance of the victim is not an element of force or coercion.

B. "great mental anguish" means psychological or emotional damage that requires psychiatric or psychological treatment or care, either on an inpatient or outpatient basis, and is characterized by extreme behavioral change or severe physical symptoms;

C. "patient" means a person who seeks or obtains psychotherapy;

D. "personal injury" means bodily injury to a lesser degree than great bodily harm and includes, but is not limited to, disfigurement, mental anguish, chronic or recurrent pain, pregnancy or disease or injury to a sexual or reproductive organ;

E. "position of authority" means that position occupied by a parent, relative, household member, teacher, employer or other person who, by reason of that position, is able to exercise undue influence over a child;

F. "psychotherapist" means a person who is or purports to be a:

- (1) licensed physician who practices psychotherapy;
- (2) licensed psychologist;
- (3) licensed social worker;
- (4) licensed nurse;
- (5) counselor;
- (6) substance abuse counselor;
- (7) psychiatric technician;
- (8) mental health worker;
- (9) marriage and family therapist;
- (10) hypnotherapist; or

- (11) minister, priest, rabbi or other similar functionary of a religious organization acting in his role as a pastoral counselor;
- G. "psychotherapy" means professional treatment or assessment of a mental or an emotional illness, symptom or condition; and
- H. "school" means any public or private school, including the New Mexico military institute, the New Mexico school for the visually handicapped, the New Mexico school for the deaf, the New Mexico boys' school, the New Mexico youth diagnostic and development center, the Los Lunas medical center, the Fort Stanton hospital, the Las Vegas medical center and the Carrie Tingley crippled children's hospital, that offers a program of instruction designed to educate a person in a particular place, manner and subject area. "School" does not include a college or university; and
- I. "spouse" means a legal husband or wife, unless the couple is living apart or either husband or wife has filed for separate maintenance or divorce.

30-9-11. Criminal sexual penetration.

- A. Criminal sexual penetration is the unlawful and intentional causing of a person to engage in sexual intercourse, cunnilingus, fellatio or anal intercourse or the causing of penetration, to any extent and with any object, of the genital or anal openings of another, whether or not there is any emission.
- B. Criminal sexual penetration does not include medically indicated procedures.
- C. Aggravated criminal sexual penetration consists of all criminal sexual penetration perpetrated on a child under nine years of age with an intent to kill or with a depraved mind regardless of human life. Whoever commits aggravated criminal sexual penetration is guilty of a first degree felony for aggravated criminal sexual penetration.
- D. Criminal sexual penetration in the first degree consists of all sexual penetration perpetrated:
 - (1) on a child under thirteen years of age; or
 - (2) by the use of force or coercion that results in great bodily harm or great mental anguish to the victim.

Whoever commits criminal sexual penetration in the first degree is guilty of a first degree felony.

- E. Criminal sexual penetration in the second degree consists of all criminal sexual penetration perpetrated:
 - (1) by the use of force or coercion on a child thirteen to eighteen years of age;
 - (2) on an inmate confined in a correctional facility or jail when the perpetrator is in a position of authority over the inmate;
 - (3) by the use of force or coercion that results in personal injury to the victim;
 - (4) by the use of force or coercion when the perpetrator is aided or abetted by one or more persons;
 - (5) in the commission of any other felony; or
 - (6) when the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual penetration in the second degree is guilty of a second degree felony.

Whoever commits criminal sexual penetration in the second degree when the victim is a child who is thirteen to eighteen years of age is guilty of a second degree felony for a sexual offense against a child and, notwithstanding the provisions of Section 31-18-15 NMSA 1978, shall be sentenced to a minimum term of imprisonment of three years, which shall not be suspended or deferred. The imposition of a minimum, mandatory term of imprisonment pursuant to the provisions of this subsection shall not be interpreted to preclude the imposition of sentencing enhancements pursuant to the provisions of the Criminal Sentencing Act [31-18-12 NMSA 1978].

- F. Criminal sexual penetration in the third degree consists of all criminal sexual penetration perpetrated through the use of force or coercion not otherwise specified in this section.

Whoever commits criminal sexual penetration in the third degree is guilty of a third degree felony.

G. Criminal sexual penetration in the fourth degree consists of all criminal sexual penetration:

- (1) not defined in Subsections D through F of this section perpetrated on a child thirteen to sixteen years of age when the perpetrator is at least eighteen years of age and is at least four years older than and not the spouse of that child; or
- (2) perpetrated on a child thirteen to eighteen years of age when the perpetrator, who is a licensed school employee, an unlicensed school employee, a school contract employee, a school health service provider or a school volunteer, and who is at least eighteen years of age and is at least four years older than the child and not the spouse of that child, learns while performing services in or for a school that the child is a student in a school.

Whoever commits criminal sexual penetration in the fourth degree is guilty of a fourth degree felony.

30-9-12. Criminal sexual contact.

A. Criminal sexual contact is the unlawful and intentional touching of or application of force, without consent, to the unclothed intimate parts of another who has reached his eighteenth birthday, or intentionally causing another who has reached his eighteenth birthday to touch one's intimate parts.

B. Criminal sexual contact does not include touching by a psychotherapist on his patient that is:

- (1) inadvertent;
- (2) casual social contact not intended to be sexual in nature; or
- (3) generally recognized by mental health professionals as being a legitimate element of psychotherapy.

C. Criminal sexual contact in the fourth degree consists of all criminal sexual contact perpetrated:

- (1) by the use of force or coercion that results in personal injury to the victim;
- (2) by the use of force or coercion when the perpetrator is aided or abetted by one or more persons; or
- (3) when the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual contact in the fourth degree is guilty of a fourth degree felony.

D. Criminal sexual contact is a misdemeanor when perpetrated with the use of force or coercion.

E. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

30-9-13. Criminal sexual contact of a minor.

A. Criminal sexual contact of a minor is the unlawful and intentional touching of or applying force to the intimate parts of a minor or the unlawful and intentional causing of a minor to touch one's intimate parts. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

B. Criminal sexual contact of a minor in the second degree consists of all criminal sexual contact of the unclothed intimate parts of a minor perpetrated:

- (1) on a child under thirteen years of age; or
- (2) on a child thirteen to eighteen years of age when:
 - (a) the perpetrator is in a position of authority over the child and uses this authority to coerce the child to submit;
 - (b) the perpetrator uses force or coercion which results in personal injury to the child;
 - (c) the perpetrator uses force or coercion and is aided or abetted by one or more persons; or

- (d) the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual contact of a minor in the second degree is guilty of a second degree felony for a sexual offense against a child and, notwithstanding the provisions of Section 31-18-15 NMSA 1978, shall be sentenced to a minimum term of imprisonment of three years, which shall not be suspended or deferred. The imposition of a minimum, mandatory term of imprisonment pursuant to the provisions of this subsection shall not be interpreted to preclude the imposition of sentencing enhancements pursuant to the provisions of Sections 31-18-17, 31-18-25 and 31-18-26 NMSA 1978.

- C. Criminal sexual contact of a minor in the third degree consists of all criminal sexual contact of a minor perpetrated:
 - (1) on a child under thirteen years of age; or
 - (2) on a child thirteen to eighteen years of age when:
 - (a) the perpetrator is in a position of authority over the child and uses this authority to coerce the child to submit;
 - (b) the perpetrator uses force or coercion which results in personal injury to the child;
 - (c) the perpetrator uses force or coercion and is aided or abetted by one or more persons; or
 - (d) the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual contact of a minor in the third degree is guilty of a third degree felony, for a sexual offense against a child.

- D. Criminal sexual contact of a minor in the fourth degree consists of all criminal sexual contact:
 - (1) not defined in Subsection C of this section, of a child thirteen to eighteen years of age perpetrated with force or coercion; or
 - (2) of a minor perpetrated on a child thirteen to eighteen years of age when the perpetrator, who is a licensed school employee, an unlicensed school employee, a school contract employee, a school health service provider or a school volunteer, and who is at least eighteen years of age and is at least four years older than the child and not the spouse of that child, learns while performing services in or for a school that the child is a student in a school.

Whoever commits criminal sexual contact in the fourth degree is guilty of a fourth degree felony.

30-6-3. Contributing to delinquency of minor.

- A. Contributing to the delinquency of a minor consists of any person committing any act or omitting the performance of any duty, which act or omission causes or tends to cause or encourage the delinquency of any person under the age of eighteen years. Whoever commits contributing to the delinquency of a minor is guilty of a fourth degree felony.

30-9-14. Indecent exposure.

- A. Indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view.
- B. As used in this section, "primary genital area" means the mons pubis, penis, testicles, mons veneris, vulva or vagina.
- C. Whoever commits indecent exposure is guilty of a misdemeanor.
- D. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted for committing indecent exposure to participate in and complete a program of professional counseling at his own expense.

30-9-14.3. Aggravated indecent exposure.

- A. Aggravated indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view in a lewd and lascivious manner, with the intent to threaten or intimidate another person, while committing one or more of the following acts or criminal offenses:

- (1) exposure to a child less than eighteen years of age;
 - (2) assault, as provided in Section 30-3-1 NMSA 1978;
 - (3) aggravated assault, as provided in Section 30-3-2 NMSA 1978;
 - (4) assault with intent to commit a violent felony, as provided in Section 30-3-3 NMSA 1978;
 - (5) battery, as provided in Section 30-3-4 NMSA 1978;
 - (6) aggravated battery, as provided in Section 30-3-5 NMSA 1978;
 - (7) criminal sexual penetration, as provided in Section 30-9-11 NMSA 1978; or
 - (8) abuse of a child, as provided in Section 30-6-1 NMSA 1978.
- B. As used in this section, "primary genital area" means the mons pubis, penis, testicles, mons veneris, vulva or vagina.
- C. Whoever commits aggravated indecent exposure is guilty of a fourth degree felony.
- D. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted for committing aggravated indecent exposure to participate in and complete a program of professional counseling at his own expense.

30-4-1. Kidnapping.

- A. Kidnapping is the unlawful taking, restraining, transporting or confining of a person, by force, intimidation or deception, with intent:
- (1) that the victim be held for ransom;
 - (2) that the victim be held as a hostage or shield and confined against his will;
 - (3) that the victim be held to service against the victim's will; or
 - (4) to inflict death, physical injury or a sexual offense on the victim.
- B. Whoever commits kidnapping is guilty of a first degree felony, except that he is guilty of a second degree felony when he voluntarily frees the victim in a safe place and does not inflict physical injury or a sexual offense upon the victim.

30-10-3 Incest.

Incest consists of knowingly intermarrying or having sexual intercourse with persons within the following degrees of consanguinity: parents and children including grandparents and grandchildren of every degree, brothers and sisters of the half as well as of the whole blood, uncles and nieces, aunts and nephews.

Whoever commits incest is guilty of a third degree felony.

ARTICLE 6A

SEXUAL EXPLOITATION OF CHILDREN

30-6A-2. Definitions.

As used in the Sexual Exploitation of Children Act [30-60A-1 to 30-60A-4 NMSA 1978]:

- A. "prohibited sexual act" means:
- (1) sexual intercourse, including genital-genital, oral-genital, anal-genital or oral-anal, whether between persons of the same or opposite sex;
 - (2) bestiality;
 - (3) masturbation;
 - (4) sadomasochistic abuse for the purpose of sexual stimulation; or
 - (5) lewd and sexually explicit exhibition with a focus on the genitals or pubic area of any person for the purpose of sexual stimulation;

B. "visual or print medium" means:

- (1) any film, photograph, negative, slide, computer diskette, videotape, videodisc or any computer or electronically generated imagery; or
- (2) any book, magazine or other form of publication or photographic reproduction containing or incorporating any film, photograph, negative, slide, computer diskette, videotape, videodisc or any computer generated or electronically generated imagery;

C. "performed publicly" means performed in a place which is open to or used by the public; and

D. "manufacture" means the production, processing, copying by any means, printing, packaging or repackaging of any visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age.

E. "obscene" means any material, when the content is taken as a whole:

- (1) appeals to a prurient interest in sex, as determined by the average person applying contemporary community standards;
- (2) portrays a prohibited sexual act in a patently offensive way; and
- (3) lacks serious literary, artistic, political or scientific value."

30-6A-3. Sexual exploitation of children.

A. It is unlawful for any person to intentionally possess any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows or has reason to know that one or more of the participants in that act is a child under eighteen years of age. A person who violates the provisions of this subsection is guilty of a fourth degree felony.

B. It is unlawful for a person to intentionally distribute any visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows or has reason to know that one or more of the participants in that act is a child under eighteen years of age. A person who violates this subsection is guilty of a third degree felony.

C. It is unlawful for any person to intentionally cause or permit a child under eighteen years of age to engage in any prohibited sexual act or simulation of such an act if that person knows, has reason to know or intends that the act may be recorded in any obscene visual or print medium or performed publicly. Any person who violates this subsection is guilty of a third degree felony, unless the child is under the age of thirteen, in which event the person is guilty of a second degree felony.

D. It is unlawful for any person to intentionally manufacture any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age. A person who violates the provisions of this subsection is guilty of a second degree felony.

E. It is unlawful for a person to intentionally manufacture any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts a prohibited sexual act or simulation of such an act and if that person knows or has reason to know that a real child under eighteen years of age, who is not a participant, is depicted as a participant in that act. A person who violates the provisions of this subsection is guilty of fourth degree felony.

F. It is unlawful for a person to intentionally distribute any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts a prohibited sexual act or simulation of such an act and if that person knows or has reason to know that a real child under eighteen years of age, who is not a participant, is depicted as a participant in that act. A person who violates the provisions of this subsection is guilty of a third degree felony.

- G. The penalties provided for in this section shall be in addition to those set out in Section 30-9-11 NMSA 1978.

30-6A-4. Sexual exploitation of children by prostitution.

- A. Any person knowingly receiving any pecuniary profit as a result of a child under the age of sixteen engaging in a prohibited sexual act with another is guilty of a second degree felony, unless the child is under the age of thirteen, in which event the person is guilty of a first degree felony.
- B. Any person hiring or offering to hire a child over the age of thirteen and under the age of sixteen to engage in any prohibited sexual act is guilty of a second degree felony.
- C. Any parent, legal guardian or person having custody or control of a child under sixteen years of age who knowingly permits that child to engage in or to assist any other person to engage in any prohibited sexual act or simulation of such an act for the purpose of producing any visual or print medium depicting such an act is guilty of a third degree felony.

30-9-1. Enticement of child.

Enticement of child consists of:

- A. enticing, persuading or attempting to persuade a child under the age of sixteen years to enter any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 [30-9-1 to 30-9-9 NMSA 1978] of the Criminal Code; or
- B. having possession of a child under the age of sixteen years in any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 of the Criminal Code.

Whoever commits enticement of child is guilty of a misdemeanor.

1. Agency Name _____
2. Quarter Reporting 1st ☐ 2nd ☐ 3rd ☐ 4th ☐ Year: 2007
3. Total Number of criminal sexual penetration (CSP) incidents: (Add State Statutes 30-9-11 and 30-10-3) _____
(If the offense incident report your officers use does not document sexual crimes by state statute, enter instead, the total number of CSP incidents perpetrated [add male and female adults and children]) _____
4. If known, of the number of CSP incidents counted in **q.3**, how many were:
a) Sodomy _____ b) with an Object _____ c) Incest _____ d) Gang Related _____ e) Resulted in Homicide _____
- 5.a) Of the number of CSP incidents counted in **q.3**, how many *victims* were there? _____
b) Of these, how many were: a) Female victims _____ b) Male victims _____
6. Of the total number of CSP *victims* in **q.5a**, give the number per *age group*:
0-6 _____ 7-12 _____ 13-18 _____ 19-25 _____ 26-35 _____
36-45 _____ 46-55 _____ 56-65 _____ 66+ _____ # Victim age unknown _____
7. Of the total number of CSP *victims* in **q.5a**, give the number of each *ethnicity*:
Caucasian _____ Hispanic _____ Native American _____ Asian/Pacific Islander _____
Black _____ Other _____ # Victim Ethnicity Unknown _____
- 8.a) Of the number of CSP incidents counted in **q.3**, how many total *offenders* were there? _____
b) Of these, how many were: a) Female offenders _____ b) Male offenders _____
9. Of the number of CSP *offenders* in **q.8a**, give the number per *age group*:
0-6 _____ 7-12 _____ 13-18 _____ 19-25 _____ 26-35 _____
36-45 _____ 46-55 _____ 56-65 _____ 66+ _____ # Offender age unknown _____
10. Of the number of CSP offenders in **q.8a**, give the number of each *ethnicity*:
Caucasian _____ Hispanic _____ Native American _____ Asian/Pacific Islander _____
Black _____ Other _____ # Offender Ethnicity Unknown _____
- 11.a) Of the number of CSP incidents in **q.3**, how many were perpetrated by a stranger to the victim? _____
b) How many CSP incidents in **q.3** were perpetrated by someone who knew the victim? _____
c) Of the number in **11b**, how many were a relative? _____
12. Of the number of CSP incidents in **q.3**, how many involved a weapon? _____ # with weapon use unknown _____
13. Of the number of CSP incidents in **q.3**, how many involved injury to the victim? _____ # injury unknown _____
14. a) Of the number of CSP incidents in **q.3**, how many involved drugs/alcohol use? _____
b) Of these, how many involved: Offender use only _____ Victim use only _____ Offender and Victim use _____
15. a) Of the number of CSP *incidents* in **q.3**, in how many of these did at least one child witness the event? _____
b) Number of CSP *incidents* in **q.3** where it is unknown if a child was present _____
16. a) What is the *total number of children* who witnessed the CSP incidents counted in **q.3**? _____
b) Of these, number per age group: 0-5 _____ 6-9 _____ 10-12 _____ 13-17 _____ 18-21 _____ # age unknown _____
17. Of the number of CSP incidents in **q.3**, how many included a suspect arrest? _____

For the reporting quarter, please give the:

18. Number of incidents of *criminal sexual contact* (or statute 30-9-12) _____
19. Number of incidents of *criminal sexual contact of a minor* (or statute 30-9-13) _____
20. Number of incidents of *indecent exposure* (or 30-9-14 and 30-9-14.3) _____
21. Number of incidents of *sexual exploitation of children* (30-6A-3 and 30-6A-4) _____
22. Number of incidents of *enticement of child* (or statute 30-9-1) _____

Quarterly Reports are due April 25th, July 25th, October 25th, and January 25th, 2008). Please send reports to: NMCSAAS, 3909 Juan Tabo Suite 6, Alb., NM 87111 or fax to (505) 883-7530. Call Betty Caponera, (505) 883-8020 for questions.

This form is to be completed by each therapist in each mental health/rape crisis center and their satellite offices for every client who presents or later discloses sexual assault/abuse. Please submit forms to: NMCSAP (505-883-8020), 3909 Juan Tabo NE, Suite 6, Albuquerque, NM 87111, by the tenth of every month.

1. Name of Agency _____

2. Client Identifier _____

A. Survivor Information3. Date of most recent sexual assault/abuse incident ____/____/____
(mo / yr)4. Survivor Gender: ☐ Male ☐ Female

5. Survivor's Age at time of most recent sexual assault/abuse incident _____

6. Survivor's Current age _____

7. Survivor Ethnicity: (check one) ☐ White (Non-Hispanic) ☐ Hispanic ☐ Mixed ☐ Native American
☐ Black ☐ Asian ☐ Unknown8. Survivor Disability (check all that apply): ☐ None ☐ Visual ☐ Mobility ☐ Hearing ☐ Physical
☐ Emotional/Mental (prior to this incident) ☐ Unknown9. Did the survivor use alcohol or drugs immediately prior to or during the most recent sexual assault incident?
☐ Yes ☐ No ☐ Unknown10. Did the survivor contract a sexually transmitted disease as a result of the most recent sexual assault?
☐ Yes ☐ No ☐ Unknown11. Did a pregnancy result from the most recent sexual assault? ☐ Yes ☐ No ☐ Unknown12. Did the survivor have a history of domestic violence as a child, either as a witness or as one directly victimized?
☐ Yes ☐ No ☐ Unknown13. Was client ever sexually assaulted/abused before this incident? ☐ No (skip to q.15) ☐ Yes (answer 13a or b)
☐ Unknown (skip to q.15)*If Yes to q.13 and,*a) the client is a victim of *ongoing* sexual abuse, enter age at onset of sexual abuse _____. (If this age is under 18, go to q.14). If age at onset of ongoing sexual abuse is unknown, check: ☐ Age Unknown (skip to q.15)*If Yes to q. 13 and,*b) the client is **not** a victim of *ongoing* abuse, enter age at time of prior incident of sexual assault/abuse _____. (If this age is under 18, go to q.14) If age at time of prior sexual assault is unknown, check: ☐ Age Unknown (skip to q.15)14. If the survivor experienced a prior sexual assault/abuse at any time before age 18, did the survivor ever become pregnant before age 18?
☐ Yes (answer q.14b) ☐ No ☐ Unknown14b. If Yes, was the pregnancy a result of the prior sexual assault? ☐ Yes ☐ No ☐ Unknown**B. Offender Information**15. Number of offenders involved in the most recent sexual assault: (check one) ☐ One ☐ Two ☐ Three
☐ Four or more ☐ Unknown

If more than one offender in the most recent sexual assault, choose one offender to answer questions 16-27

16. Offender Gender: ☐ Male
(check one) ☐ Female17. Offender Age: (check one) ☐ 5 and under ☐ 6-12 ☐ 13-17 ☐ 18-24
☐ 25-34 ☐ 35-44 ☐ 45-54 ☐ 55-64 ☐ 65+ ☐ Unknown

18. *Offender Ethnicity* (check one): ☐ **White (Non-Hispanic)** ☐ **Hispanic** ☐ **Native American** ☐ **Black**
☐ **Asian** ☐ **Mixed** ☐ **Unknown**

19. *Did the offender use alcohol or drugs immediately prior to or during the current sexual assault incident?*
☐ **Yes** ☐ **No** ☐ **Unknown**

20. *Did the offender have a history of domestic violence as a child, either as a witness or one directly victimized?*
☐ **Yes** ☐ **No** ☐ **Unknown**

C. Sexual Offense Information

21. *Type of Offense:* (check all that apply) ☐ **Penetration** (includes: oral, anal, vaginal) - *please specify, if applicable:*
☐ **spousal rape** ☐ **incest** ☐ **date rape** ☐ **gang rape**

☐ **Attempted Penetration**

☐ **Sexual Harassment**

☐ **Fondling (no penetration)** ☐ **Stalking** ☐ **Indecent Exposure** ☐ **Unknown**

22. *Survivor/Offender Relationship* (check only one, either from 22a, 22b or 22c):

a) *Known Relative Offender:* ☐ **Father** ☐ **Mother** ☐ **Sister** ☐ **Brother** ☐ **Step-Brother**
☐ **Grandfather** ☐ **Grandmother** ☐ **Step-mother** ☐ **Step-father** ☐ **Current spouse**
☐ **Brother in law** ☐ **Sister in Law** ☐ **Cousin** ☐ **Aunt** ☐ **Uncle** ☐ **Other**

b) *Known Non-Relative Offender:* ☐ **Ex- spouse** ☐ **Mom's boyfriend** ☐ **Dad's girlfriend**
☐ **Mom's lesbian partner** ☐ **Dad's gay partner** ☐ **Survivors lesbian/gay partner**
☐ **Social acquaintance** ☐ **New acquaintance** ☐ **Employer**
☐ **Clergy/spiritual leader** ☐ **Health care provider** ☐ **Friend** ☐ **Teacher**
☐ **Therapist** ☐ **Boyfriend** ☐ **Girlfriend** ☐ **Co-worker** ☐ **Other**

c) ☐ **Stranger**

23. *Was the offender the same ethnicity as the survivor?* ☐ **Yes** ☐ **No** ☐ **Unknown**

24. *Type of Coercion/Weapon Used:* (check all that apply)

☐ **Knife** ☐ **Physical Force** ☐ **Verbal Threat** ☐ **Manipulation**
☐ **Gun** ☐ **Other Weapon** ☐ **Intentionally drugged by perpetrator**
☐ **Other** ☐ **Unknown**

25. *Location of Most Recent Offense:* (check one)

☐ **Vehicle** ☐ **Survivor's home** ☐ **Offender's home** ☐ **Other residence**
☐ **Public Facility** ☐ **Parking Lot** ☐ **Workplace** ☐ **School**
☐ **Multiple locations** ☐ **Other** ☐ **Unknown**

26. _____ / _____ / _____ / _____
city county state reservation or country outside of U.S.

27. *Time of most recent assault:* ☐ **Morning (6a.m.-noon)** ☐ **Afternoon (12:01-6p.m.)**
☐ **Evening (6p.m.-10p.m.)** ☐ **Night (10:01p.m.-6a.m.)** ☐ **Unknown**

28. *The most recent sexual assault was reported by:* ☐ **Survivor** ☐ **Therapist** ☐ **Not Reported**
(check one) ☐ **Unknown** ☐ **Other** _____

29. *If reported, the most recent sexual assault was reported to* (check all that apply):

☐ **Social Services** ☐ **Rape Crisis Center** ☐ **ER/Sexual Assault Nurse Examiner** ☐ **Law Enforcement**
☐ **Other** ☐ **Unknown**

30. *Was medical treatment sought for injuries?* ☐ **Yes** ☐ **No** ☐ **Unknown**

31. *Was rape kit evidence collection within 72 hours after assault?* ☐ **Yes** ☐ **No** ☐ **Unknown**

32. *If known, survivor's family annual income at the time of the most recent incident* _____. ☐ **Income Unknown**
