Letter from the Director...

In 1996, with the use of first-time Violence Against Women Act (VAWA) funds, I conducted a statewide assessment to find out how prevalent sexual assault and domestic violence were in New Mexico. At that time, there were no statewide sources of interpersonal violence crime data, except the Uniform Crime Report, which captured male-to-female vaginal rape. While two national victimization surveys had been conducted by then to get a baseline of the incidence and prevalence of sexual assault, domestic violence, and stalking, there were no states, including New Mexico, that had conducted a victimization survey to get a baseline rate of *all* these crimes – reported and unreported.

My 1997 recommendations resulting from the assessment, were to: 1) standardize interpersonal violence data collection among relevant agencies – law enforcement, service providers, district attorney's offices, courts, emergency rooms, tribal lands, and college campuses; 2) establish a central repository; 3) collect the standardized data on a regular basis throughout the year; and 4) produce annual statewide sexual assault and domestic violence reports for public and professional use.

For the next two years, I worked with professionals from numerous agencies to standardize the data among law enforcement, service providers and the courts. By January 1999, the NM Interpersonal Violence Data Central Repository was established. By December 1999, we had our first full year of domestic violence data. By December 2000, we had our first full year of sexual assault data, which included all forms of criminal sexual penetration and most non-penetration sex crimes. The first ever *Incidence and Nature of Domestic Violence in New Mexico* report was published in June 2000; and the first ever *Sex Crime in New Mexico* report was published in September 2001.

While it was a good start to have statewide data annually, on reported interpersonal violence crimes, we only touched the surface. We had no idea how many of these crimes went unreported each year. That would change in 2005, when we conducted our first statewide victimization survey.

The findings from this survey opened our eyes to the real prevalence of sexual assault, domestic violence, intimate partner violence, and stalking in our state. It spearheaded changes in policy to address how we identify victims of these crimes. It provided data to justify requests for funding to expand services for victims, provide training for counselors, advocates, law enforcement investigative units, prosecution units, court monitoring programs, stalking protocols, sex offender treatment, batterer intervention programs, rape crisis centers, SANE units, and Child Advocacy programs, and led to multi-disciplinary teams in communities throughout the state to share resources to help prevent and comprehensively respond to interpersonal violence crimes.

Over the years, the data quality has evolved and other excellent sources of data have become available. Even now, for the first time, efforts are underway to collect data among SANE programs that serve Native Americans on tribal lands. Yet, there is much left to do. We still do not have an established means of collecting domestic violence and sexual assault data from law enforcement and service providers on tribal lands, or college campuses, or hospital emergency rooms, or long-term living

facilities, or among persons with disabilities. And, as we so painfully learned in 2020, much training needs to be done to address how to prevent and respond to interpersonal violence crimes among those most vulnerable in a pandemic and other times of mass trauma.

It is bittersweet for me to tell you that I will not be a part of this very important work going forward. This is my last *Incidence and Nature of Domestic Violence in New Mexico* report. I have decided to begin the next step in my own evolution, as I embark on the next phase of my life's journey. It has been the honor and privilege of my life to serve you and the State of New Mexico for the last 26 years, while you were doing the hardest work of all – keeping us safe and restoring healing for all of us; and for that, I will be forever grateful.

Warmest regards,

A handwritten signature in black ink, reading "Betty Caponera". The signature is fluid and cursive, with a long, sweeping underline that extends to the right.

Betty Caponera, Ph.D.
Director

ACKNOWLEDGEMENTS

ON BEHALF OF THE NEW MEXICO INTERPERSONAL VIOLENCE DATA CENTRAL REPOSITORY, WE WOULD LIKE TO THANK ALL THOSE WHO WENT ABOVE AND BEYOND TO ASSIST THE NEEDS OF DOMESTIC VIOLENCE SURVIVORS AND THEIR FAMILIES, WHILE WORKING TIRELESSLY TO RESTORE PRE-COVID-19 LEVELS OF SERVICE.

Program Guidance and Funding:

- Department of Health, Office of Injury Prevention
- Frank Zubia, Director, State of New Mexico Crime Victims Reparation Commission
- MaryEllen Garcia, State of New Mexico Crime Victims Reparation Commission, VAWA Program Manager

Data Systems and Analysis:

- Joe Vigil, Administrative Office of the Courts, Senior Statistician
- Steve Harrington, AOC Information Technology Support Manager, Judicial Information Division
- Daniel Cannon, Iterative Consulting, Data Software Development

Report Publication:

- Kim Alaburda, Distribution, New Mexico Coalition of Sexual Assault Programs
- Lisa Meyer, Graphics and Design, New Mexico Coalition of Sexual Assault Programs
- Kathleen Donlin, New Mexico Coalition of Sexual Assault Programs

** A special thanks to the chiefs, sheriffs, marshals, and records department staff of all the participating law enforcement agencies; executive directors and staff of the domestic violence service providers; and all data entry staff of the individual law enforcement agencies and district courts without whom this report would not be possible.*

▶ Law Enforcement-Reported Domestic Violence Incidents Involving Alcohol/Drugs, 2021	28%
▶ Service Provider Domestic Violence Cases Involving Alcohol/Drug Use, 2021	21%
▶ Service Provider Domestic Violence Victims Reporting Offender Alcohol/Drug Use, 2021	59%
▶ Service Provider Domestic Violence Offenders Reporting Their Own Alcohol/Drug Use, 2021	51%
▶ Service Provider Domestic Violence Cases Reported to Law Enforcement	50%
▶ Law Enforcement-Reported Domestic Violence Incidents with a Suspect Arrest, 2021	53%
▶ Law Enforcement-Reported Stalking Incidents, 2021	180
▶ Law Enforcement-Reported Harassment Incidents, 2021	1,298
▶ District and Magistrate Courts New Harassment Cases Filed, 2021	275
▶ District and Magistrate Courts New Stalking and Aggravated Stalking Cases Filed, 2021	596
▶ District and Magistrate Courts New False Imprisonment Cases Filed, 2021	1,436
▶ Number of Domestic Violence-Related Cases for Which a Protection Order was Issued By statewide District Courts	6,432
▶ Total Number of Domestic Violence-Related Protection Orders Issued	14,065
▶ District Court New Domestic Violence Charges Filed, 2021	3,082
▶ District Court New Domestic Violence Cases Filed, 2021	1,906
▶ District Court Domestic Violence Charges Disposed, 2021	2,920
▶ District Court Domestic Violence Cases Disposed, 2021	1,881
▶ District Court Domestic Violence Cases with A Conviction, 2021	509 (27%)
▶ District Court Domestic Violence Cases Dismissed, 2021	1,004 (53%)
▶ Magistrate Court New Domestic Violence Charges Filed, 2021	15,585
▶ Magistrate Court New Domestic Violence Cases Filed, 2021	12,514
▶ Magistrate Court Domestic Violence Charges Disposed, 2021	15,890
▶ Magistrate Court Domestic Violence Cases Disposed, 2021	12,925
▶ Magistrate Court Domestic Violence Cases with A Conviction, 2021	678 (5%)
▶ Magistrate Court Domestic Violence Cases Dismissed, 2021	10,604 (82%)

DOMESTIC VIOLENCE IN NEW MEXICO 2021 HIGHLIGHTS

Betty Caponera, Ph.D.
October 2022

Funded by the State of New Mexico, Department of Health, Office of Injury Prevention

I. INTRODUCTION

A. UNDERSTANDING THE DATA

The annual Central Repository data collected from statewide law enforcement and service provider agencies and the district and magistrate courts are beset with the same flaws experienced in all of social research. While great pains are taken to standardize the data being collected and to provide instruction to those collecting the data, there are many problems inherent in the realities of data collection of this scope. Examples of these problems include: the discretion of individuals completing data collection forms, the room for subjective interpretation during data entry, inconsistencies in staff training, and the quality, extent, and timing of reporting caused by staff turnover, inconsistent agency' participation due to funding changes from year-to-year, data management abilities, confidentiality concerns and verification of summary data reports. Additionally, there remain critical gaps in sources of data needed to provide a more accurate estimate of reported interpersonal violence crimes in New Mexico: (a) Native American victimizations on tribal lands; b) victimizations on New Mexico college campuses; c) victimized patients who present in hospital emergency rooms; d) prosecuted victimizations in statewide district attorney's offices; e) victimizations among immigrant communities; f) victimizations in long-term living/healthcare facilities; and g) victimizations among people with disabilities.

For all the above stated reasons, all the data presented in this report annually, represent the bare minimum of domestic violence incidents that have taken place in the covered time frame. They are simply the assaults that were reported to an agency, which in turn, reported to the Central Repository. As there are inherent flaws in data collection and many gaps in the data, the gold standard to obtain a much more reliable estimate of the incidence and prevalence of interpersonal violence in New Mexico is to conduct a statewide victimization survey.

B. DATA SOURCES

Data sources from the Central Repository for this report include aggregate domestic violence data from statewide law enforcement and service provider agencies and individual data from district and magistrate courts provided by the Administrative Office of the Courts (AOC). The data analyzed for this report cover domestic violence data for the period 1/1/21– 12/31/21.

Additionally, findings and implications from the Adult Survivor Database (ASD) data, the Albuquerque SANE Collaborative Domestic Violence data, the National Intimate Partner and Sexual Violence Survey (NISVS, 2022), NISVS 2015 Update, and the 2010-2012 NISVS State Report are included to inform domestic violence prevention and system response.

II. SUMMARY OF FINDINGS 2021

Overall, there was a 3% increase in the number of domestic violence incidents reported to law enforcement agencies in 2021 compared to 2020. While there was a 53% increase in crises/hotline calls to domestic violence service providers, there was a much smaller increase (6%) in the number of adult victims who received domestic violence services. The increases in incidents reported by law enforcement and cases reported by service providers are well-short of the numbers reported in pre-COVID-19, 2019 (10% and 12% fewer, respectively).

Overall, there were 22% more children and 11% more offenders who received domestic violence services in 2021 compared to 2020. However, the numbers served are 17% and 18% respectively, fewer than were served in pre-COVID-19, 2019.

There were negligible differences in the proportions of incidents involving injury and weapon use in 2021 compared to 2020, as reported by law enforcement. However, service providers reported a 15% decrease in the number of victims served who reported being injured; and as was found in 2020, more children were sexually assaulted by the adult victim's offender (14.5%) than adult victims were sexually assaulted (11%).

In 2021, both law enforcement and service provider agencies reported fewer cases involving alcohol/drugs than in 2020, but the differences were insignificant - 2% and 3%, respectively.

While there was a 15% decrease in the number of domestic violence cases for which the district courts issued an order of protection in 2021 compared to 2020, and a 4% decrease from pre-COVID-19, 2019 cases, there was a 19% increase in the number of domestic violence district court case filings in 2021 compared to 2020, and a 3% increase over the number filed in pre-COVID-19, 2019.

Conversely there was a 5% decrease in the number of domestic violence case filings in magistrate courts in 2021 compared to 2020, and a 2% decrease compared to the number filed in pre-COVID-19, 2019.

The conviction rate in domestic violence cases in district courts in New Mexico in 2021 (31%), was 4% lower than the conviction rate in 2020, while the conviction rate in domestic violence cases in statewide magistrate courts (5%) remained the same.

The proportion of domestic violence cases that were dismissed in statewide district courts in 2021 (53%), is consistent with the proportions dismissed in 2020 (54%) and 2019 (56%). Similarly, the proportion of domestic violence cases that were dismissed in the magistrate courts in 2021 (82%), is consistent with the proportions of cases dismissed in 2020 (83%), and 2019 (81%).

A summary of specific frequencies and demographics on domestic violence, intimate partner violence, and stalking, as well as information on several characteristics of these interpersonal crimes are presented below.

A. DOMESTIC AND INTIMATE PARTNER VIOLENCE PREVALENCE

In 2021, there were 20,776 domestic violence incidents reported to statewide law enforcement agencies, a 3% increase from that reported in 2020 (20,144), but a 10% decrease from that reported pre-COVID-19, in 2019 (22,999).

The statewide incidence rate of *reported* domestic violence in New Mexico in 2021, is 10.0 per 1000 population, a decrease from 10.2 per 1000 in 2020. The *reported* rate of victimizations (number of victims) in 2021 was 10.1 per 1000 population, a decrease from 11.4 per 1000 population in 2020.

Over three-quarters (88%) of domestic violence victimizations reported to statewide law enforcement agencies and the cases reported by statewide domestic violence service providers (79%) were perpetrated by a current or former intimate partner.

Nationally, the *National Intimate Partner and Sexual Violence Survey (NISVS) State Report* found that 37.3% of women in the U.S. experienced intimate partner violence (physical assault, sexual assault and/or stalking by a current or former spouse, boyfriend, or girlfriend). One in 4 women in the U.S. has experienced severe physical violence by an intimate partner in her lifetime, and 1 in 3 experienced being pushed, slapped or shoved by an intimate partner. Similarly, the NISVS found that 30.9% of men in the U.S. experienced intimate partner violence. One in 7 men in the U.S. has experienced severe physical violence by an intimate partner in his lifetime, and 1 in 4 has been slapped, pushed or shoved by an intimate partner. (Smith, S.G., Chen, J., Basile, et al, [NISVS] 2017).

Nationally, in the 12-month period prior to the NISVS, 6.4% of adult men were victims of intimate partner violence; 4.5% of adult men were victims of intimate partner *physical violence*, and 2.0% victims of *severe physical violence*. Similarly, the NISVS reported that 6.6% of adult women were victims of intimate partner violence; 3.6% of adult women were victims of intimate partner *physical violence*, and 2.7% victims of *severe physical violence*.

The NISVS reported that the lifetime rate of intimate partner violence among women in New Mexico was 37.6%, just slightly higher (0.3%) than the national rate. Similarly, NISVS reported that the lifetime rate of intimate partner violence among men in New Mexico was 33.3%, which is higher (2.4%) than the national rate.

There are no annual incidence rates of intimate partner violence among adult men and women in New Mexico. However, given that our lifetime rates of intimate partner violence for men and women are higher than the national rates, if we conservatively apply the national 12-month rate of intimate partner violence (6.6% of adult women) to the adult women population in New Mexico, an estimated 54,854 adult women in New Mexico experienced intimate partner violence, in 2021.

Similarly, if we conservatively apply the national 12-month rate of intimate partner violence (6.4% of adult men) to the adult male population in New Mexico, an estimated 51,938 adult men in New Mexico experienced intimate partner violence, in 2021. The total estimated incidence of intimate partner violence in New Mexico is 106,792.

B. STALKING PREVALENCE

The 180 stalking cases reported by statewide law enforcement agencies in 2021, represent a 22% decrease from the number of stalking cases reported by law enforcement in 2020 (231). While law enforcement reported 180 stalking cases in 2021, there were 596 new stalking and aggravated stalking cases filed in district (194) and magistrate courts (402) in 2021.

The lifetime stalking rates for women (15.8%) and men (5.3%) in the United States are less than the lifetime stalking rates for women (19.0%) and men (6.1%) in New Mexico (NISVS, 2017). If we conservatively apply the national annual stalking rate for adult men (1.9%) to the adult male population in New Mexico, an estimated 15,419 adult men in New Mexico experienced stalking in 2021. Similarly, if we conservatively apply the national 12-month rate of stalking for adult women (4.2%) to the adult women population in New Mexico, an estimated 34,907 adult women in New Mexico experienced stalking, in 2021.

The total estimated incidence of stalking in New Mexico in 2021, is 50,326, which is 280 times higher than the stalking reported to law enforcement in 2021, (180) and 84 times higher than the number of new cases of stalking/aggravated stalking filed in statewide district and magistrate courts in 2021 (596).

In 2021, there were 1,298 harassment incidents reported to law enforcement. This represents a 8% decrease in the number of harassment incidents reported in 2020 (1,417).

Similarly, there were 275 new harassment cases filed in statewide district and magistrate courts in 2021, a 7% decrease from 2020 (297).

C. CRISES/HOTLINE CALLS TO STATEWIDE SERVICE PROVIDERS AND THE NUMBER OF VICTIMS SERVED

In 2021, 15,187 crisis calls were handled by domestic violence service providers. This represents a 53% increase over the 9,914 crisis calls handled by domestic violence service providers in 2020. Nationally, 6.1% of women and 1.5% of men who were victims of intimate partner violence, talked to a crisis hotline operator (NISVS, 2022).

There were 6,512 adult victims served by statewide domestic violence service providers in 2021. This represents a 6% increase from the number served in 2020 (6,122). Nationally, 20.2% of intimate partner violence victims received assistance from a victim-service agency. (Criminal Victimization, 2021).

D. VICTIM DEMOGRAPHICS

Over two-thirds (69%) of the domestic violence victims identified by law enforcement were female. Ninety percent of the adult-victims served by domestic violence service providers were female.

New Mexico victims of domestic violence, as reported by law enforcement, were predominantly 19-45 years old (65%) and Hispanic (48%). Similarly, adult victims, as reported by domestic violence service providers, were predominantly 22-40 years old (55%) and Hispanic (49%).

E. SUSPECT DEMOGRAPHICS

In 2021, suspects, as reported by law enforcement, were predominantly male (73%), Hispanic (47%), and 19-45 years of age (77%). Offenders, as reported by domestic violence service providers, were predominantly male (84%), Hispanic (47%), and 22-40 years of age (63%).

Findings from the NISVS State Report revealed that 84.8% of lifetime stalking victimizations with female victims and 43% of lifetime stalking victimizations with male victims had a male offender. The National Crime Victimization Survey (Crime Victimization, 2021), found that male victims of all violent crime victimizations, had a male offender in 80% of incidents, a female offender in 8.5% of incidents, and both a male and female offender in 3.4% of incidents. Similarly, it NCVS found that female victims of *all violence victimizations* had a male offender in 64% of incidents, a female offender in 25% of incidents, and both a male and female offender in 6.2% of incidents.

F. CHILDREN VICTIM-WITNESSES

Of 15,545 law enforcement reports that documented the number of incidents with children present at the scene in 2021, there were 3,725 (24%) incidents where at least one child was present.

There was a total of 5,918 children present at the scene of domestic violence incidents as reported by law enforcement, and over two-thirds (43%) of the children who witnessed these incidents were not yet adolescents (12 years and under).

In 2021, there were 5,425 domestic violence service-provider reports that identified 1,168 (21.5%) domestic violence incidents where children were present at the scene, or at least one child witness for every 4.6 incidents. Over three-quarters (78%) of children victim-witnesses served were under age 12.

Nationally, the NCVS found children were residents in the household of an average 38% of incidents each year of intimate partner violence involving female victims and an average 21% of incidents involving male victims. (Catalano, 2007, *Intimate Partner Violence in the U.S.*).

In New Mexico in 2021, 25% of children victim-witnesses, as reported by domestic violence service providers, experienced physical abuse from the current offender of the adult victim, and 14.5% experienced sexual abuse from the current offender of the adult victim.

G. OFFENSE CHARACTERISTICS

1. Alcohol/Drug Use Incidence

In 2021, statewide law enforcement agencies reported that 28% of domestic violence incidents involved alcohol/drug use. This represents a 2% decrease from the number reported in the 2020 (30%). Similarly, alcohol/drugs were used by 21% of cases reported by domestic violence service providers. Over half (59%) of offenders of the victims served by statewide service providers used alcohol/drugs at the time of the domestic violence incident. This represents an 18% decrease from that reported in 2020 (77%).

The NCVS reported that the presence of any alcohol or drugs was reported by victims in about 42% of all nonfatal intimate partner violence. (Catalano, 2007, Intimate Partner Violence in the U.S.)

2. Weapon Incidence

A weapon was used in 54% of domestic violence cases reported by law enforcement and 19% of the cases reported by victims served by domestic violence service providers, in 2021. The large disparity between weapon-related assaults in domestic violence cases reported by law enforcement and victims may be explained in part, by a difference in perception between the two parties regarding what constitutes a weapon. Police officers, guided by state statute, regard the use of fists, feet, elbows, etc., as “personal weapons”. Victims may define weapons as objects other than those defined as “personal weapons” such as a bat, gun, knife, etc.

In 2021 in New Mexico, as reported by law enforcement, 6% percent of all assaults involved a firearm, 8% involved a knife, and 82% involved “other” weapons. Nationally, 7% of all violence victimizations involved a firearm (Criminal Victimization, 2021). The NCVS found that 28.1% of intimate partner violence with a male victim and 15.6% of intimate partner violence victimizations with a female victim involved a non-personal weapon. A firearm was involved in 3.6% of intimate partner victimizations with a female victim and 0.5% victimizations with a male victim. A knife was involved in more (9.9%) incidents of intimate partner violence with a male victim (9.9%), than a female victim (5.6%). (Catalano, 2007, Intimate Partner Violence in the U.S.)

3. Injury Incidence

Fewer than half (41%) of law enforcement-reported domestic violence cases in 2021, involved injury to the victim. One-third (35%) of adult victims served by domestic violence service providers reported being physically injured from the domestic assault. Nationally, 35.3% of women and 21.1% of men reported being injured by an intimate partner in their lifetime (NISVS, 2022). Additionally, 1.3% of women and 1% of men were injured by an intimate partner in the previous 12-months. Among those injured, 13.9% of women and 4.3% of men needed medical care (NISVS, 2022).

4. Victim/Offender Relationship

Current or former intimate partner described the victim/offender relationship of 71% of law enforcement-reported domestic violence cases and 79% of domestic violence cases reported by service providers, in 2021. The NCVS reported that 60% of reported and unreported domestic violence victimizations involved an intimate partner (current or former spouse, boyfriend or girlfriend) (Criminal Victimization, 2019). Family members accounted for 25% of law enforcement reported offenders and 9% of offenders reported by domestic violence service providers.

5. Interpersonal Violence Reported to Law Enforcement

In 2021, 50% of domestic violence victims who went for help reported their victimization to law enforcement. This represents a 3% increase over the number of victims who reported their victimization in 2020 (47%). Nationally, 48.9% of all domestic violence victimizations were reported to law enforcement, a 7.8% decrease from that reported in 2020 (41.1%). Similarly, nationally, 41% of intimate partner victimizations were reported to law enforcement in 2021, which equals the proportion reported to law enforcement in 2020. (Criminal Victimization, 2021).

6. Rates of Suspect Arrest

In 2021, 53% of domestic violence incidents resulted in a suspect arrest. This represents a 5% decrease from the proportion of incidents with a suspect arrest in 2020 (58%).

H. DOMESTIC VIOLENCE AND THE COURTS

1. Protection Orders

In 2021, there were 14,065 protection orders issued by statewide district courts for one or more parties involved in 6,432 domestic-violence related protection order cases. The 6,432 cases represent a 15% decrease in the number of domestic-violence related protection order cases in 2020 (7,551). Of the 14,065 protection orders issued, 2% were emergency protection orders, 80% domestic violence temporary orders of protection, and 18% judgments for permanent protection orders.

The ASD revealed that half (49%) of domestic violence survivors obtained a protection order for the most recent domestic violence incident. Of the 628 survivors involved in a prior domestic violence incident as an adult, 20% (125) obtained an order of protection. With regard to prior domestic violence events, more females (20%) than males (12%) reported obtaining a protection order.

2. New Domestic Violence Charges Filed

Overall in 2021, there were 18,667 new domestic violence charges filed in 14,420 new cases in statewide district and magistrate courts, including the Bernalillo County Metropolitan Court. The number of new domestic violence cases filed in 2021, represent a 2.5% decrease from the number filed in 2020 (14,787).

There was a total of 3,082 domestic violence charges filed in 1,906 new cases of domestic violence in New Mexico District Courts in 2021. The new domestic violence cases filed in district courts represent a 19% increase over the number filed in 2020 (1,604).

There was a total of 15,585 domestic violence charges filed in 12,514 new cases of domestic violence in New Mexico Magistrate Courts in 2021. The new domestic violence cases filed in magistrate courts represent a 5% decrease from the number filed in 2020 (13,183). All cases/charges are against a household member. Battery, aggravated battery, and false imprisonment comprised most of the charges filed in both courts.

3. Domestic Violence Cases Disposed in District Courts

Of the 1,881 cases of domestic violence disposed in district courts in 2021, 27% (509) obtained a guilty plea/conviction, 1% (13) obtained an acquittal, 53% (1,004) were dismissed, and 19% (355) had prosecution proceedings that resulted in “other” dispositions (conditional discharges, remands, consent decrees, and deferred cases).

4. Domestic Violence Cases Disposed in Magistrate Courts

Of the 12,925 domestic violence cases disposed in magistrate courts, 82% (10,604) were dismissed, 0.4% (52) were acquitted, and 5% (678) obtained a guilty plea or conviction. The remaining 12% (1,591) were cases with “other” dispositions (deferred, transferred, bind over, and conditional discharge cases) which demonstrated prosecution proceedings that did not result in a dismissal, conviction, or acquittal.

III. IMPLICATIONS OF THE FINDINGS

A. Identifying Children at Risk

Service providers reported that children were present at one out of every five domestic violence incidents in 2021, and 78% of them were under the age of twelve. The ASD revealed that children who witness abuse are four times more likely to experience child abuse than children who do not witness abuse. It further found that most (62%) abused children experienced multiple types of abuse, most typically at the hands of a family member (84%); and those abused as children have poorer health outcomes. Survivors abused as children compared to those not abused were six times more likely to be abused as an adult, four times more likely respectively, to be told they have a mental illness and attempt suicide, and three times more likely respectively, to think about suicide and be told they have a substance abuse problem. The children served by statewide service providers (2,029) represent 34% of the number present at the scene of domestic violence incidents as reported by law enforcement (5,918). These numbers represent only children in domestic violence cases that are reported. With so much at stake, it is imperative that greater effort be made (protocols for coordinated community response and systems put in place) to better identify children that witness child abuse and ensure participation in appropriate counseling services for assessment and treatment.

B. Poverty and Violence

Most of the battered women who go to a domestic violence service provider for shelter and/or other services are poor. Since there is no way to capture the number of survivors with financial means who access private services, and/or who travel out of state for services, it is not possible to determine the true proportion of survivors among all battered women who are poor. However, the ASD found that most unmarried survivors with children and those without children who went for domestic violence services in New Mexico meet federal poverty level requirements for 150% and 133% of income, as well as the more restrictive federal poverty income level.

Almost two-thirds (60%) of survivors reported that they left a violent relationship at some time. Of these, one-third (32%) reported that they returned. Reasons for returning to their abuser in the order of most mentions include, returned: *to try to work it out*, *for the children*, and *because I was scared*. A central core of the consideration for returning “for the children” is finances. Among the descriptions for scared is “no support/lack of resources”. Indeed, the ASD revealed that survivors who left a violent relationship and did not return had a median annual income \$2,080 greater (\$12,000) than those who left and returned (\$9,920). It further found that only 42% of survivors who are eligible/receive

Medicaid/TANF assistance live in their own apartment or home. Most live in shelter (23%), with a friend (29%), transitional housing (1%), or on the street (3%).

Of survivors who were involved in a prior domestic violence experience, 43% reported that they live with an offender with whom they have had a prior domestic violence incident. When examined by income, survivors who live with an offender with whom they have had a prior domestic violence experience had a median annual income of \$2,400 less (\$9,600) than survivors who do not live with an offender with whom they have had a prior domestic violence experience (\$12,000).

All of this points to the reality of the role that poverty plays in an individual's vulnerability to living with violence. Greater emphasis must be focused on providing basic housing, food, clothing, transportation, and access to employment and health care for victims and their families to allow them to leave and stay away from a violent environment.

C. Injury Risk Factors

Law enforcement agencies reported that 41% of the domestic violence incidents in 2021, involved injury to the victim. They do not document or report injury to children. Service providers reported that 35% of adult survivors and 25% of children were injured in domestic violence cases that came to their attention.

Nationally, one-third (35.3%) of women reported being injured by an intimate partner in their lifetime; and 1.3% were injured in the previous twelve months. Among injured women, 13.9% needed medical care. (NISVS, 2022). Similarly, 21% of men nationally, reported being injured by an intimate partner in their lifetime; and 1.0% were injured in the previous twelve months. Among injured men, 4.3% needed medical care. (NISVS, 2022).

In New Mexico, findings from the ASD found that among the types of abuse reported by the 89% of survivors who reported abuse by an intimate partner, are *physical attack* (60%), *physical restraint* (29%), *threatened to be harmed or killed* (34%), *strangulation* (12%), *sexual assault* (11%) and *involvement of a lethal weapon* (12%). Twenty percent of children present during these abusive incidents suffered the same types of abuse.

The ASD revealed that survivor risk of injury increased among survivors: a) with a substance abuse problem; b) with a mental illness; c) involved in a prior domestic violence incident; d) ever abused while pregnant; e) who are female; or f) who are Native American. This information has implications for law enforcement for assessing risk of harm to the survivor and children at the scene, and for service providers when developing safety plans with survivors.

D. Evidence Supporting the Focus on Early Intervention to Prevent Domestic Violence

In 2021, almost three-quarters (71%) of the law enforcement incidents documenting the victim/offender relationship, were perpetrated by a current or former intimate partner, half (46%) of these by current or former boyfriends/girlfriends who are or were dating or living together. Similarly, 79% of adult victims who sought services from a domestic violence service provider were assaulted by a

current or former intimate partner, 37% of these were dating or living together. The NISVS State Report found that 37.3% of women and 33.3% of men in New Mexico were victims of intimate partner violence in their lifetime. Further, nationally 7.1% of women who were victims of intimate partner violence in their lifetime and 3.7% of men who were victims of intimate partner violence in their lifetime were victimized before age 18. In New Mexico, 6.9% of women who were victims of intimate partner violence in their lifetime were victimized before age 18. Further, stalking behaviors begin in adolescence and the reported incidence of adolescent stalking is almost twice that of adolescent intimate partner violence. The NISVS updated 2015 data found that half (54.1%) of females who were stalked in their lifetime were stalked before age 25, 21.2% before age 18. Similarly, it found that 41% of males were first stalked before the age of 25, 12.9% before the age of 18. (NISVS, Data Brief 2018). The high proportion of interpersonal violence cases perpetrated by adolescent offenders, demonstrates that true prevention requires early education initiatives on building healthy relationships during adolescence.

E. Sexual Assault Prevention and Treatment for Domestic Violence Child and Adult Victims

In 2012, the ASD found many children experienced sexual abuse (8%) at the hands of their adult-victim's offender. Similarly in 2021, 11% of adult domestic violence victims seeking counseling services and 14.5% of children were sexually assaulted by their offender.

The NISVS State Report reported that 16.5% of women in New Mexico that were ever victims of intimate partner violence, experienced contact sexual violence (rape and/or unwanted sexual contact) by their intimate partner. This suggests that effective prevention and treatment programs for domestic violence victims must include components of sexual assault prevention and treatment or must provide referrals to appropriate sexual assault services.

F. Interpersonal Violence Prevention and Advocacy for Males

In New Mexico in 2021, 31% of domestic violence victims identified by law enforcement were males. The NISVS State Report found that 33.3% of New Mexico men were victims of intimate partner violence in their lifetime and 6.4% of adult males were victims in the previous 12-month period. In New Mexico, this is equivalent to an estimated 51,938 adult men who experienced intimate partner violence in 2021. More outreach must be done to identify male victims of interpersonal violence and offer prevention and treatment programs specific to males.

G. Providing Offender Treatment Programs

In New Mexico, 73% of suspects identified by law enforcement and 84% of offenders identified by domestic violence service providers in 2021, were male. Findings from the NISVS State Report revealed that in 84.8% of lifetime stalking victimizations with female victims and 43% of lifetime stalking victimizations with male victims, had a male offender. Perhaps greater outcomes in domestic violence prevention may be realized through greater availability of offender prevention and therapeutic programs that include strategies for addressing aggression in male socialization.

H. Evidence Supporting the Need to Identify Domestic Violence Victims in the Healthcare Setting

In 2021, law enforcement reported that 41% of adult victims were physically injured during a domestic violence incident. Similarly, statewide service providers reported that 35% of adults and 25% of children were physically injured by the adult victim's offender during a domestic violence incident. The NISVS State Report stated that an average 30.8% of female victims of intimate partner violence and 13.4% of male victims of intimate partner violence each year nationally, were injured. Additionally, an average 15.3% of women and 6.2% of men each year required medical care for their injuries. This suggests that New Mexico healthcare facilities may play an important role in both, the identification of domestic violence victims and their referral to appropriate services.

Patients that are seen in the healthcare/emergency room setting with a domestic violence-related injury are typically not reported to law enforcement and represent a substantial gap in reporting. While many healthcare facilities use screening tools to identify patients who are victims of domestic violence, no standardized monitoring system to reliably document the number of these individuals currently exists. Methods to determine healthcare utilization by victims of violence through e-codes or billing databases have been unsuccessful and are unreliable at best, due to definitional problems of the codes, practitioner discretion and inconsistencies in naming injuries, and the insurance-related intentions of billing databases. The need to rectify these problems is underscored by findings from the NISVS State Report which revealed substantial co-morbidity with intimate partner violence victims with regard to chronic physical and mental health problems. Among women victims of intimate partner violence, 6.2% reported poor physical health compared to 3.0% of women with no history of violence. Similarly, among women victims of intimate partner violence, 3.6% reported poor mental health compared to 1.1% of women with no history of violence.

The process for collecting standardized domestic violence data from statewide medical facilities is not yet established. Since many times the first, and perhaps only contact a victim may have with the "helping system" is through a hospital emergency department or physicians' office, this creates a significant void in the Central Repository data and represents a major obstacle in accurately defining the scope and nature of domestic violence in our state. Moreover, until better protocols are established for identifying patient visits associated with interpersonal violence, a significant portion of the total cost of interpersonal violence to individuals, their communities, and the state cannot be estimated.

I. Evidence Supporting the Need for Better Court Data on Domestic Violence

The Central Repository obtains data on many crimes against a household member from the Administration Office of the Courts: battery/aggravated battery, assault/aggravated assault, stalking/aggravated stalking, false imprisonment, criminal damage to property, deprivation of property, harassment, and violation of a restrictive order.

Still, more comprehensive protection order information is needed to determine the efficacy of protection orders and emergency protection orders, their rate of enforcement, and the consequences for violating protection orders for offenders and victims.

It is important to obtain better court data because evidence of currently available data demonstrates that over half of all district court domestic violence cases and over three-quarters of magistrate court domestic violence cases in the last 10 years were dismissed. Additionally, there has been a steady decrease in the rate of domestic violence convictions in statewide district and magistrate courts. In 2021, the conviction rates of disposed domestic violence cases in district (27%) and magistrate courts (5%) were among the lowest rates of conviction over the last ten years.

Without better data from the courts, vital information, such as why the dismissal rate in domestic violence cases has increased and why the rate of conviction for domestic violence cases has decreased, remains unknown. Answers to these questions will serve to improve the efficacy of legal advocacy for domestic violence victims.

J. Covid-19 Pandemic Implications for Change

In 2019, the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) published a report on Biodiversity and Ecology that warned of future pandemics. The events of 2020 have taught us that it is critical to fully understand our capabilities to serve and protect during times of mass trauma. The government and the private sector must work together to take strategic action to address the range and scope of system failures during the COVID-19 pandemic that resulted in devastating human and economic costs.

Perhaps nowhere is the need to ensure that appropriate policies and systems are in place, communities well equipped and prepared, and response effectively coordinated during catastrophic events, than among those systems and professionals whose purpose it is to prevent domestic violence and further, effectively assist those who have been abused.

Lessons from the pandemic have shown that there is no aspect of domestic violence response that does not need to be analyzed and evaluated for determining the changes that are needed to ensure that, during catastrophic events: 1) at risk families are identified, know a way to seek help, and can access help; 2) helping agencies are adequately staffed with trained personnel, equipped, coordinated with each other, and funded to continue operations; and 3) staff is safe, with needed protections for themselves and their families that enable them to effectively continue to perform their work.

INCIDENCE AND NATURE OF DOMESTIC VIOLENCE IN NEW MEXICO XX:
An Analysis of 2021 Data from
The New Mexico Interpersonal Violence Data Central Repository

INCIDENCE AND NATURE OF DOMESTIC VIOLENCE IN NEW MEXICO, 2021

I. INTRODUCTION

A. UNDERSTANDING THE DATA

The annual Central Repository data collected from statewide law enforcement and service provider agencies and the district and magistrate courts are beset with the same flaws experienced in all of social research. While great pains are taken to standardize the data being collected and to provide instruction to those collecting the data, there are many problems inherent in the realities of data collection of this scope. Examples of these problems include:

- 1) the discretion of individuals completing data collection forms – e.g. when an officer responds to a domestic violence incident, do they have enough knowledge of the law to identify a victim at the crime scene and document it correctly?
- 2) data entry – when data entry personnel enter data are they restricted by the data program software to ensure that what is entered would be entered the same by anyone entering the data, or is there too much room for interpretation that could result in one person documenting a different circumstance than another, when faced with the same incident report?
- 3) staff turnover – is there training of new staff regarding the data forms to be completed and how to complete them? Data is completely lost or can lose validity when one staff leaves without properly training a replacement.
- 4) inconsistent participation – at times, agencies have the funding and personnel to assign data collection and documentation to one or more individuals and other times they lack this luxury. This is particularly true for service provider agencies with limited budgets, with personnel dedicated to helping survivors in need. Providers are forced to wear many hats, and reluctantly, as a practical matter of the demands of providing essential services, data collection must take a back seat. Therefore, some years an agency will participate fully, completing required report forms in a timely manner. Other years, they will submit the bare minimum of data, and less frequently, or not at all. This results in many more victims being helped than are actually reported.
- 5) data management – many large agencies have software that accommodates the data collected and can produce requested reports, at will. Many smaller agencies lack this time saving software and must devote significantly more time to review their records to enable them to report to the Central Repository. These reviews can often times be subjective; and as they are done less frequently or even once a year, some crimes may be missed and therefore, are not counted and reported.
- 6) confidentiality concerns and data verification – those who work in domestic violence know that keeping the identity of their clients confidential is of the highest importance. For this reason, most data collected by the Central Repository is summary in nature, rather than based on individual records, and is not submitted on-line. The Central Repository does not have personnel that can go to every statewide agency and check their data collection personnel, software, and data entry procedures; and summary data makes data verification for all practical purposes, impossible. Therefore, the Central Repository must accept that the data submitted is true.

7) data demands – statewide law enforcement and service provider agencies, and the district and magistrate courts rely heavily on state and federal funds to exist and maintain their operations. Each funder has data collection and reporting requirements and worse, the requirements are in a constant state of evolution. The volume of these data reporting requirements is prohibitive and is not accompanied by additional funding to adequately meet the demand. This “data overload” results in inconsistent reporting, at best.

8) data gaps – in social research there are always data gaps. In New Mexico, domestic violence data from several sources must be improved to have a more accurate estimate of the annual incidence and prevalence of these crimes. These sources include obtaining domestic violence and interpersonal violence incidents among: a) Native Americans on tribal lands; b) New Mexico college campuses; c) hospital emergency rooms; d) district attorney’s offices; e) immigrant communities; f) long-term living healthcare facilities; and g) organizations that assist people with disabilities.

For all the above stated reasons, all the data presented in this report annually, represent the bare minimum of domestic violence incidents that have taken place in the covered time frame. They are simply the incidents that were reported to an agency, which in turn, reported to the Central Repository. As there are inherent flaws in data collection and many gaps in the data, the gold standard to obtain a much more reliable estimate of the incidence and prevalence of interpersonal violence in New Mexico is to conduct a statewide victimization survey.

In 2005, the Department of Health, Office of Injury Prevention obtained funds to conduct the Survey of Violence Victimization in New Mexico (SVV). The purpose of the survey was to obtain state estimates of the prevalence and nature of victimization among adults in New Mexico. Preliminary findings from the SVV were published in the report, *Incidence and Nature of Domestic Violence in New Mexico VI, July 2006*.

The Central Repository has been publishing the baseline rates of domestic violence and stalking for New Mexico every year since 2006, on the FACT SHEET of its annual *Incidence and Nature of Domestic Violence in New Mexico* report. As it has been 17 years since the first statewide victimization survey, the original findings are outdated and have lost their relevancy. It is past time to conduct a follow-up survey to measure changes in incidence and prevalence rates in interpersonal crimes in New Mexico. Fortunately this year, state funds were designated for this purpose. Hopefully data from this new statewide victimization survey will be available next year.

In the meantime...The National Intimate Partner and Sexual Violence Survey (NISVS) funded by the National Center for Injury Prevention and Control of the Centers for Disease Control and Prevention, is an on-going survey of sexual violence, stalking, and intimate partner violence among adult women and men in the United States. Fortunately, data collected from 2010-2012 were analyzed to determine estimated lifetime rates of specific interpersonal violence victimizations for all 50 states and the District of Columbia and the findings published in the NISVS 2010-2012 State Report. While annual incidence rates are not available for most states, this report is invaluable to provide lifetime estimates of these reported and unreported interpersonal violence crimes that could otherwise not be obtained unless each state had the funds to conduct its own victimization survey.

The NISVS State Report found significant differences in the prevalence of lifetime interpersonal violence among survivors of different racial/ethnic groups. In 2017, findings from an examination of six years of individualized domestic violence data from the Albuquerque Sane Collaborative were published in a special supplement of the *Incidence and Nature of Domestic Violence in NM, XVI* report, 2017. This special

supplement, *An Examination of Domestic Violence by Survivor Race/Ethnicity in Bernalillo County*, can be found on-line at nmcswp.org.

Current estimates of each of the specified interpersonal violence crimes presented on the FACT SHEET of this report are based on the *NISVS 2010-2012 State Report*, hereafter referred to as the NISVS State Report. As even these data are now 10 years old, the recent allocation of funds to conduct a new statewide victimization survey in New Mexico could not have come at a better time.

From 2010 to 2012, the Adult Survivor Database (ASD) was developed in collaboration with the New Mexico Coalition Against Domestic Violence to capture research information on individual domestic violence survivors who seek assistance from statewide domestic violence service providers. The individual data made possible the study of existing relationships between factors that influence risk and outcomes of domestic violence victimization. Findings from the ASD were first published in the 2013 *Incidence and Nature of Domestic Violence XII*, report. To review these findings see **Appendix A: Life Experiences of Adult Survivors of Domestic Violence**.

This report presents an analysis of aggregate law enforcement and service provider domestic violence data from calendar year 2021, individual data from the Administration Office of the Courts, which were all submitted to the New Mexico Interpersonal Violence Data Central Repository, and implications of the findings.

Finally, an analysis of 15 important domestic violence variables for each individual county is presented, so that the reader can access important domestic violence trends in his/her county at a glance.

II. DEFINITIONS

Domestic violence incidence, as determined by law enforcement, include all incidents of assault, aggravated assault, battery, aggravated battery, and criminal damage to property as outlined in the “Crimes Against Household Members Act” in statutes 30-3-10 through 3-3-18. Full definitions are found in **Appendix B**.

Data submitted from law enforcement agencies are used to determine statewide domestic-violence reported incidence and the county rates of reported domestic violence.

Domestic violence cases, as determined by domestic violence service providers, include all adult victims who are accepted as clients by the providers for delivery of services. Data on children victim-witnesses and offenders served by domestic violence service providers are also analyzed and presented herein. None of the cases served by the domestic violence service providers are considered in the county reported rates of incidence to avoid possible duplication of reporting.

Domestic violence data from all magistrate and district courts include codes that capture aggravated assault, aggravated battery, aggravated stalking, assault, battery, stalking, assault with intent to commit a violent felony, criminal damage to property, deprivation of property, false imprisonment, violation of a protective order, and harassment - all against a household member. These codes are extracted from the Administrative Office of the Courts Judicial Information System.

Currently, standardized data from each aforementioned discipline are submitted to the Central Repository on a quarterly basis. The data from the Central Repository analyzed for this report covers domestic violence data for the period 1/1/21 – 12/31/21.

III. LAW ENFORCEMENT AND SERVICE PROVIDER DATA FINDINGS

A. Domestic Violence Incidents in 2021 Reported to Law Enforcement

There were 116 law enforcement agencies that submitted domestic violence data to the Central Repository during 2021 (see **Appendix C**). Data from each participating agency was extracted from police offense incident reports and submitted in aggregate form on the standardized *Law Enforcement Domestic Violence Data Collection Form* (see **Appendix D**).

The total number of reports for each variable analyzed from law enforcement varies, as all questions may not be answered on each report submitted. The number of reports considered for each question analyzed is stated throughout the report as the findings on each variable are discussed. There were 20,776 domestic violence incidents reported to statewide law enforcement agencies in 2021. This represents a 3% increase from that reported in 2020 (20,144), but a 10% decrease from that reported pre-COVID-19, in 2019 (22,999).

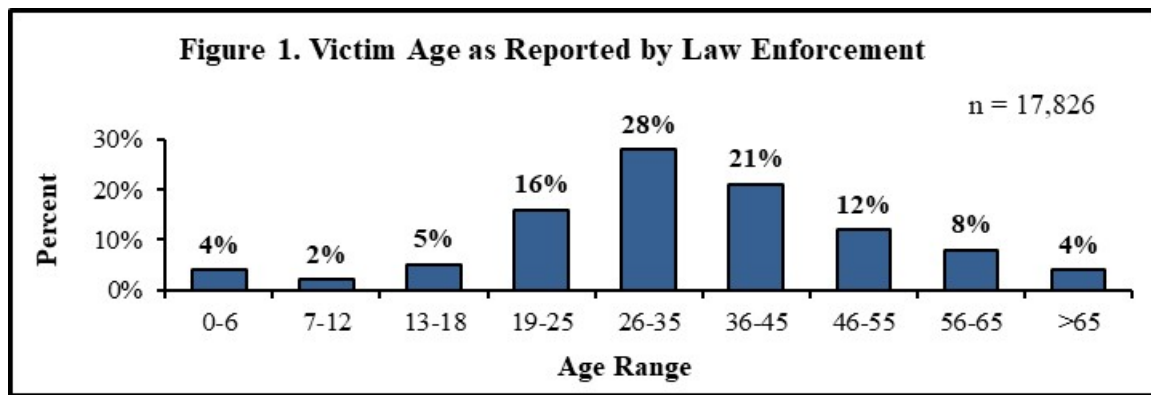

▶ Law Enforcement-Reported Domestic Violence Incidents, 2021:	20,776
▶ Reported Incidents by County, Alphabetically	Appendix E
▶ Rate of Reported Victimizations by County	Appendix F
▶ Rate and Rank of Reported Victimizations by County, Alphabetically	Appendix G
▶ Reported Rate Trends for Each County 2017- 2021	Section 3A
▶ Incidents Reported by Law Enforcement Agency	Table 1
▶ Law Enforcement-Reported Incidents by Agency and County	Table 2

B. Domestic Violence Victims Reported to Law Enforcement: Number, Gender, and Age

There were 22,286 victims involved in the 20,776 domestic violence incidents reported to statewide law enforcement agencies in 2021. Victim gender was identified in 17,883 cases.

▶ Number of Adult Victims Identified by Law Enforcement	22,286
▶ Number Gender Known	17,883
▶ Number Male Victims	5,473 (31%)
▶ Number Female Victims	12,410 (69%)
▶ Number and Gender of Victims by Law Enforcement Agency	Table 3

Of the 17,826 reports that identified *victim age*, the greatest proportion of all victims was in the age group 26-35 (28%), followed by 36-45 (21%), and 19-25 (16%). See **Figure 1**.

C. Domestic Violence Suspects Identified by Law Enforcement: Number, Gender, and Age

There were 20,968 suspects involved in the 20,776 domestic violence incidents. Suspect gender was documented in 15,492 cases.

▶ Number of Suspects Identified by Law Enforcement	20,968
▶ Number of Suspects Gender Known	15,492
▶ Number Male Suspects	11,257 (73%)
▶ Number Female Suspects	4,235 (27%)
▶ Number and Gender of Suspects by Law Enforcement Agency	Table 4

Of 15,289 reports that identified *suspect age*, the age group with the greatest proportion of reported suspects was 26-35 (36%), followed by 36-45 (23%), and 19-25 (18%). See **Figure 2**.

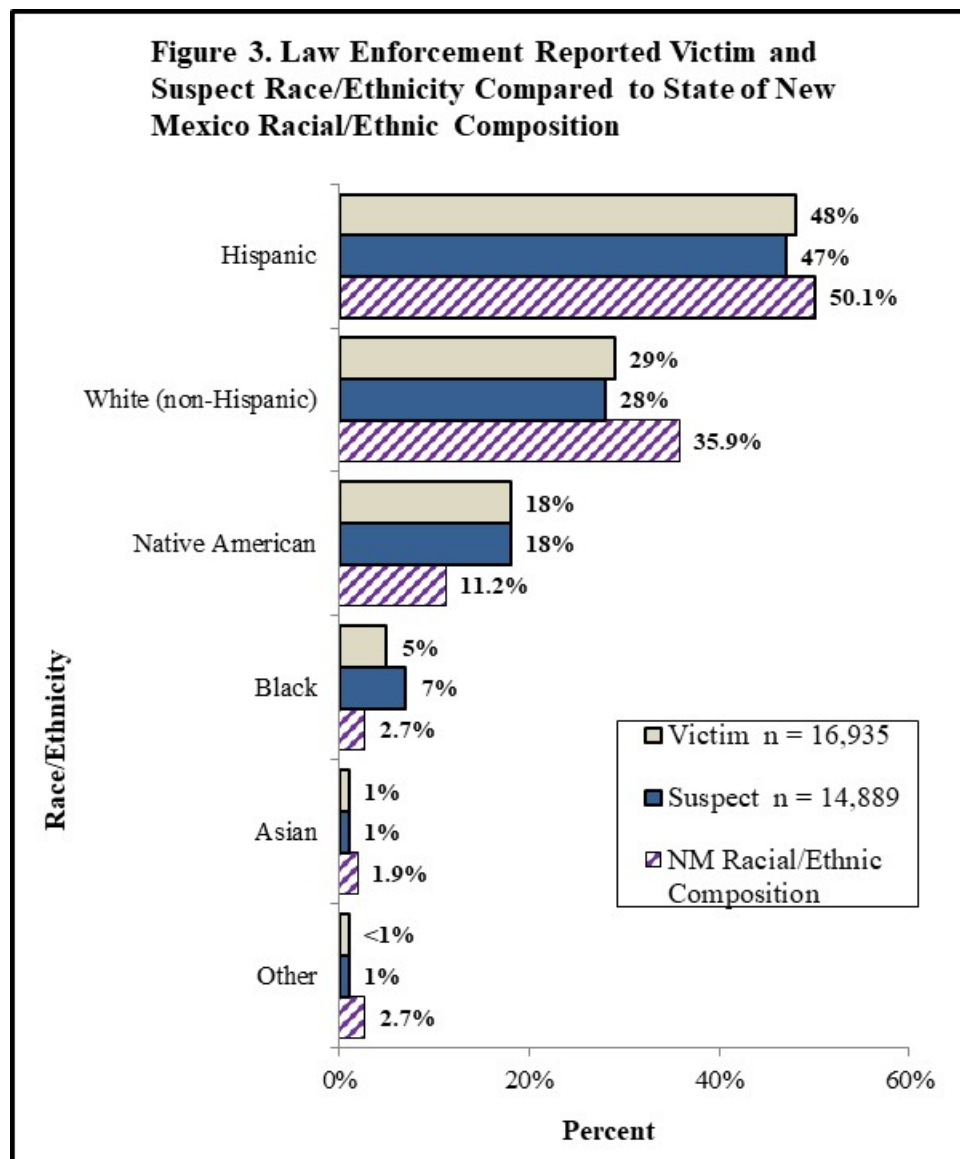

D. Race/Ethnicity of Victims and Suspects Identified by Law Enforcement

▶ Number of Law Enforcement Victims Race/Ethnicity Identified	16,935
▶ Number of Law Enforcement Suspects Race/Ethnicity Identified	14,889

Of 16,935 domestic violence victims, 48% were Hispanic, 29% White (non-Hispanic), 18% Native American, 5% Black, 1% Asian, and <1% (0.4%) victims of “other” races. Likewise, of the 14,889 reports that identified suspect race/ethnicity, 47% were Hispanic, 28% White (non-Hispanic), 18% Native American, 7%

Black, and 1% respectively, Asian and suspects of “other” races. For a comparison of victim and suspect race/ethnicity to racial/ethnic compositions in New Mexico, see **Figure 3**.

E. Stalking and Harassment Incidents Identified by Law Enforcement

There were 14,910 law enforcement reports that documented the number of stalking cases that came to the attention of law enforcement in 2021. Of these, 180 (1.2%) stalking cases were identified. Similarly, there were 15,559 reports that documented the number of harassment cases that came to the attention of law enforcement. Of these, 1,298 (8%) harassment cases were identified.

► Number of Law Enforcement-Identified Domestic Violence Incidents	20,776
► Number of Law Enforcement Reports Documenting Stalking Status	14,910
► Number of Stalking Incidents Identified by Law Enforcement	180 (1.2%)
► Number of Stalking Cases Reported by Law Enforcement Agency	Table 5

▶ Number of Law Enforcement Reports Documenting Harassment Status	15,559
▶ Number of Harassment Incidents Identified by Law Enforcement	1,298 (8%)
▶ Number of Harassment Cases Reported by Law Enforcement Agency	Table 6
▶ Number of Harassment and Stalking Cases Reported, by County	Table 7

F. Domestic Violence Victims Served by Domestic Violence Service Providers

There were 30 domestic violence service providers that submitted data to the Central Repository for 2021 (see **Appendix H**). Aggregate data from each participating agency was extracted from client intake information and submitted on the standardized *Domestic Violence Service Agencies Data Collection Form* (see **Appendix I**).

The total number of reports for each variable analyzed from service providers varies as all questions may not be answered on each report submitted. The number of reports considered for each question analyzed is stated throughout the report as the findings on each variable are discussed.

1. Number Seeking Services

There were 9,524 new clients (adult victims, children victim-witnesses and offenders) served during 2021. While this represents a 10% increase over the number of total clients served in 2020 (8,677), it is 14% fewer than were served pre-COVID-19 in 2019 (11,061).

▶ Number of Adult Victims, Children, and Offenders Served for All Counties	Table 8
▶ Number of Adult Victims Served by Agency	Table 9
▶ Five-Year Trends of All Served for Each County	Section 3B
▶ Total Number of Adult Victims Served by Service Providers	6,512
▶ Total Number of Children Victim/Witnesses Served by Service Providers	2,029
▶ Total Number of Offenders Treated by Service Providers	983
▶ Number of Offenders Treated by Agency	Table 10

An analysis was conducted comparing the number of adult victims served to the number of domestic violence incidents reported by law enforcement (in counties with the law enforcement agency from the largest city reporting, *and* where the direct service provider reported in all four quarters of 2021). This analysis revealed that *Hidalgo County* had the fewest number of victims receiving services relative to the number of incidents reported to police (1 out of 14.0), followed by *Dona Ana County* (1 out of 12.7), *Chaves County* (1 out of 11.3), and *San Juan County* (1 out of 7.2). See **Figure 4** for the rate of all qualifying counties.

In 2021, the number of adult victims who went to service providers for help (6,512) represent 29% of domestic violence victims identified by law enforcement (22,286). This is slightly less than the 31% of law enforcement incidents represented by adult victims served in 2020.

Offenders who went for treatment (983) represent 4.7% of the domestic violence suspects identified by law enforcement (20,968). This is a 0.7% increase from those represented in 2020.

Figure 4. Rate of Adult Victims Served to Law Enforcement Reports of Domestic Violence for Selected Counties

2. Gender of Those Served

Survivor gender was documented in 6,329 adult victims served. Ninety percent (5,683) of the adult victims served were female. Conversely, 84% (823) of the 982 reports that documented offender gender, reported the offender was male. Gender was documented 1,989 of the children victim-witnesses served. Fifty percent respectively, were female (993) and male (996) children. See **Figure 5**.

- Number of Victims Served by Each Service Provider Agency, by Gender
- Number of Offenders Served by Service Provider Agency, by Gender

Table 11

Table 12

3. Ages of Those Served

The age of the adult victim was documented in 6,425 provider reports. Among adult victims, 55% (3,546) were predominately ages 22-40; 32.5% (2,089) ages 41-59; 6% (405) ages 60-74; and 5% (330) ages 18-21. Victims ages >74 comprised 1% (55) of all adult victims served. See **Figure 6**.

The age of offenders was documented in 915 provider reports. Among offenders, 63% (578) were predominately ages 22-40; 28% (253) ages 41-59; 7% (60) ages 18-21 and 3% (24) ages 60-74. Refer to Figure 6.

The age of children victim-witnesses was documented in 1,995 of the children served. Thirty-nine percent respectively, of the children victim-witnesses were ages <6 (772) and ages 6-11 (784); 22% (435), ages 12-17; and 0.2% (4), ages 18-21 years old. See **Figure 7**.

4. Race/Ethnicity of Those Served

The race/ethnicity of the adult victim was identified in 6,628 reports. Of these, 49% (3,251) were Hispanic, 31% (2,034) White (non-Hispanic), 12% (791) Native American, 4% (261) Black, 3% (230) “other”, and 1% (61) Asian. For a comparison of adult victims’ racial/ethnic distribution to the racial/ethnic composition of New Mexico, see **Figure 8**.

Hispanics comprised 54% (1,051) of the 1,959 children victim-witnesses where race/ethnicity was documented, followed by Native Americans, 23% (441); Whites (non-Hispanics), 16% (311); Blacks, 4% (79); “other” races, 3% (63); and Asians, 1% (14). Refer to Figure 8.

Of the 973 offender reports that documented offender race/ethnicity, the racial/ethnic group with the greatest number of offenders represented were Hispanics, 47% (455), followed by Whites (non-Hispanics), 25% (244); Native Americans; 22% (214); Blacks, 3% (30); “other” race/ethnicity, 3% (29); and Asians, 0.1% (1). Refer to Figure 8.

G. Domestic Violence Incidents That Involve Alcohol and/or Drug Use

► Law Enforcement Reports Documenting Alcohol/Drug Use Status	16,073
► Number Law Enforcement Incidents Involving Alcohol/Drug Use	4,512 (28%)
► Number of Law Enforcement-Reported Domestic Violence Incidents Involving Alcohol/Drug Use for All Counties	Table 13
► Five-Year Trends in Domestic Violence Cases Involving Alcohol/Drug Use for Each County	Section 3C

**Figure 8. Ethnicity/Race of Victim, Offender, and Child Witnesses
(as Reported by Domestic Violence Service Providers) Compared
to State of New Mexico Ethnic/Racial Composition**

H. Alcohol and/or Drug Use Among Victims Who Sought Help

- ▶ Number of Service-Provider Victim Reports Documenting Alcohol/Drug Status 2,842
- ▶ Number of Adult Victims Served Who Reported Using Alcohol/Drugs At The Time of The Domestic Violence Incident 585 (21%)

One-fifth (21%) of service provider cases reported victim-use of alcohol/drugs at the time of their domestic violence incident. Service providers reported that over half (59%) of adult-victim domestic violence cases involved an offender who was using alcohol/drugs. See **Figure 9**.

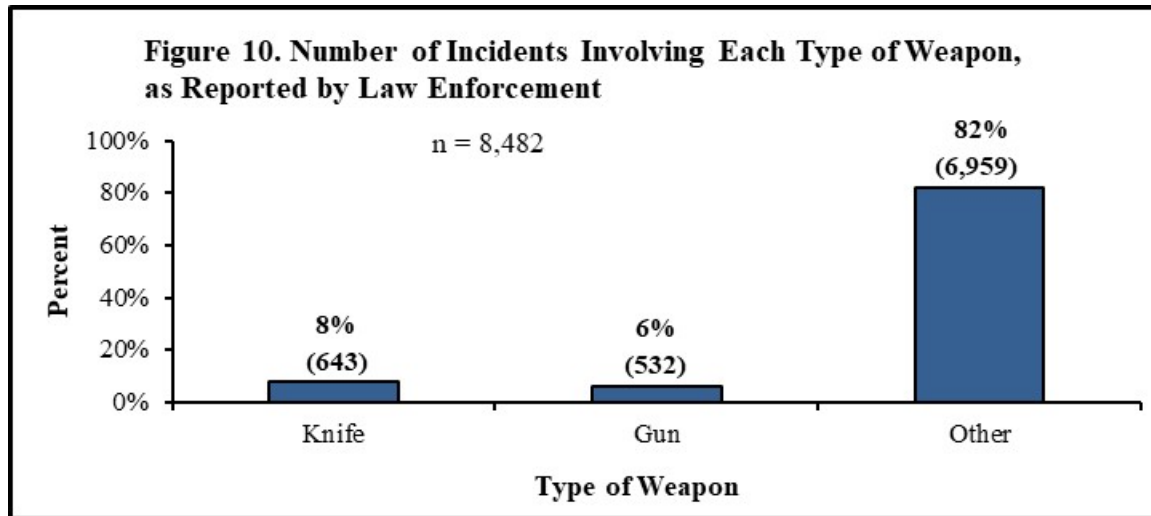

- ▶ Number of Adult Victims Served Who Reported Whether Their Offender Was Using Alcohol/Drugs at the Time of The Domestic Violence Incident 2,423
- ▶ Number of These Reporting Offender Use of Alcohol/Drugs 1,420 (59%)
- ▶ Number of Service-Provider Offender Reports Documenting Alcohol/Drug Status 581
- ▶ Number of Offenders Served Who Reported Using Alcohol/Drugs At the Time of the Domestic Violence Incident 297 (51%)

I. Domestic Violence Incidents That Involve A Weapon

- ▶ Number of Law Enforcement Reports Documenting Weapon-Use Status 15,767
- ▶ Number of Law Enforcement-Reported Incidents Involving A Weapon 8,482 (54%)
- ▶ Number of Law Enforcement-Reported Incidents Involving A Weapon by Agency **Table 14**
- ▶ Number of Law Enforcement-Reported Domestic Violence Incidents Involving A Weapon for All Counties **Table 15**
- ▶ Five-Year Trends in Domestic Violence Cases Involving Weapon Use for Each County **Section 3D**

There were 8,134 weapons identified in the 8,482 domestic violence incidents where a weapon was used. A knife was used in 8% (643) of the incidents involving weapons. A firearm was used in 6% (532) of the incidents involving weapons. “Other” weapons including, “personal” weapons (fist, feet, etc.) and “non-personal” weapons (boards, lamps, etc.) were used in 82% (6,959) of the incidents involving weapons. See **Figure 10**.

J. Weapon Use Among Those Who Sought Help

- ▶ Number of Service Provider Cases Documenting Weapon-Use Status 3,822
- ▶ Number of Service Provider Cases Involving A Weapon 735 (19%)
- ▶ Number of Service Provider Cases Involving A Weapon, by Agency **Table 16**

K. Domestic Violence Incidents That Involve Injury to Adult Victims

- ▶ Number of Law Enforcement Incidents Documenting Injury Status 16,506
- ▶ Number of Law Enforcement Incidents Involving Injury 6,790 (41%)
- ▶ Percent Law Enforcement-Reported Incidents Involving Injury, by County **Table 17**
- ▶ Five-Year Trends in Domestic Violence Cases Involving Victim Injury for Each County **Section 3E**

There were 6,575 injuries documented in the 6,790 cases involving injury. Of these, 83% (5,463) were minor injuries, 10% (664) major injuries, 4% (252) severe lacerations, 1% respectively, loss of consciousness (69), broken bones (61), and internal injuries (55), and 0.2% (11) loss of teeth. See **Figure 11**.

L. Domestic Violence Incidents With Children Present At The Scene

▶ Number of Service Provider Reports That Documented Whether Children Were Present	5,425
▶ Number of Service Provider Domestic Violence Cases with Children Present	1,168 (21%)
▶ Number of Law Enforcement Domestic Violence Reports Documenting Status Of Children Present	15,545
▶ Number of Law Enforcement Domestic Violence Incidents with Children Present	3,725 (24%)
▶ Total Number of Children Present at the Scene of Domestic Violence Incidents Reported to Law Enforcement	5,918

As reported by law enforcement, the ages of the children witnesses were documented in 5,519 cases. Nearly one-third (31%) of these children were ages 18-21, 25% ages 13-17, 23% under 6 years of age, 11% ages 6-9, and 9% ages 10-12. Therefore, 43% of the children who witnessed domestic violence incidents were not yet adolescents. See **Figure 12**.

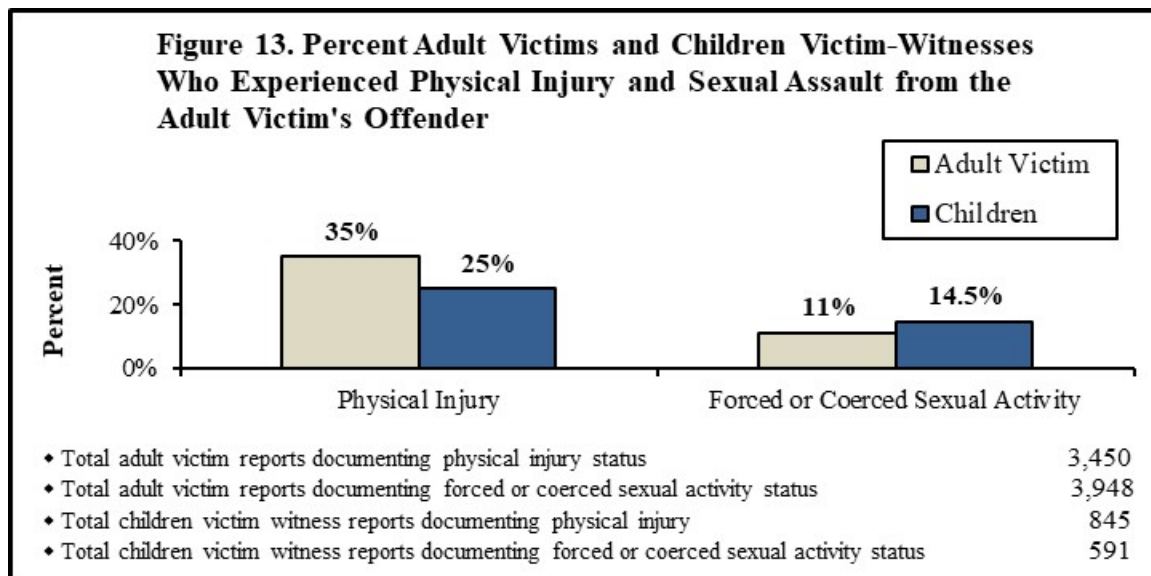

There were 15,545 law enforcement-reported domestic violence incidents that documented both the number of incidents with children present and the number of children present. Of these incidents, 3,725 had children present and the total number of children present was 5,767 or 1.5 children per incident.

M. Injury and Sexual Assault Among Adult Victims and Children Who Sought Help

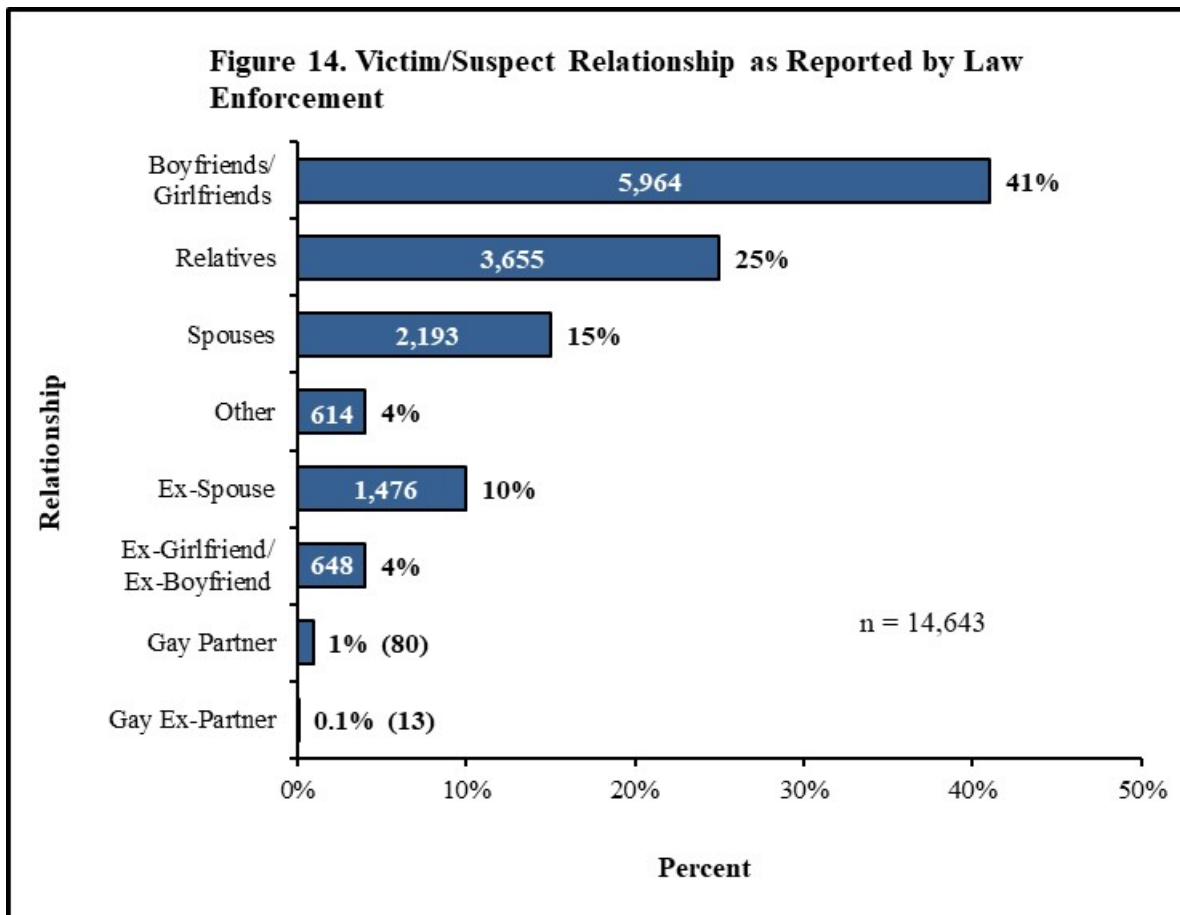

Of 3,450 service provider reports, 1,198 (35%) adult victims reported being physically injured from the domestic assault. Similarly, there were 3,948 provider reports that identified 447 (11%) adult victims who experienced forced or coerced sexual activity from the current offender. See **Figure 13**.

There were 845 service provider reports that identified 208 (25%) children victim-witnesses that experienced physical abuse from the current offender of the adult victim. Similarly, there were 591 provider reports that identified 86 (14.5%) children victim-witnesses who experienced sexual abuse from the current offender of the adult victim. Refer to Figure 13.

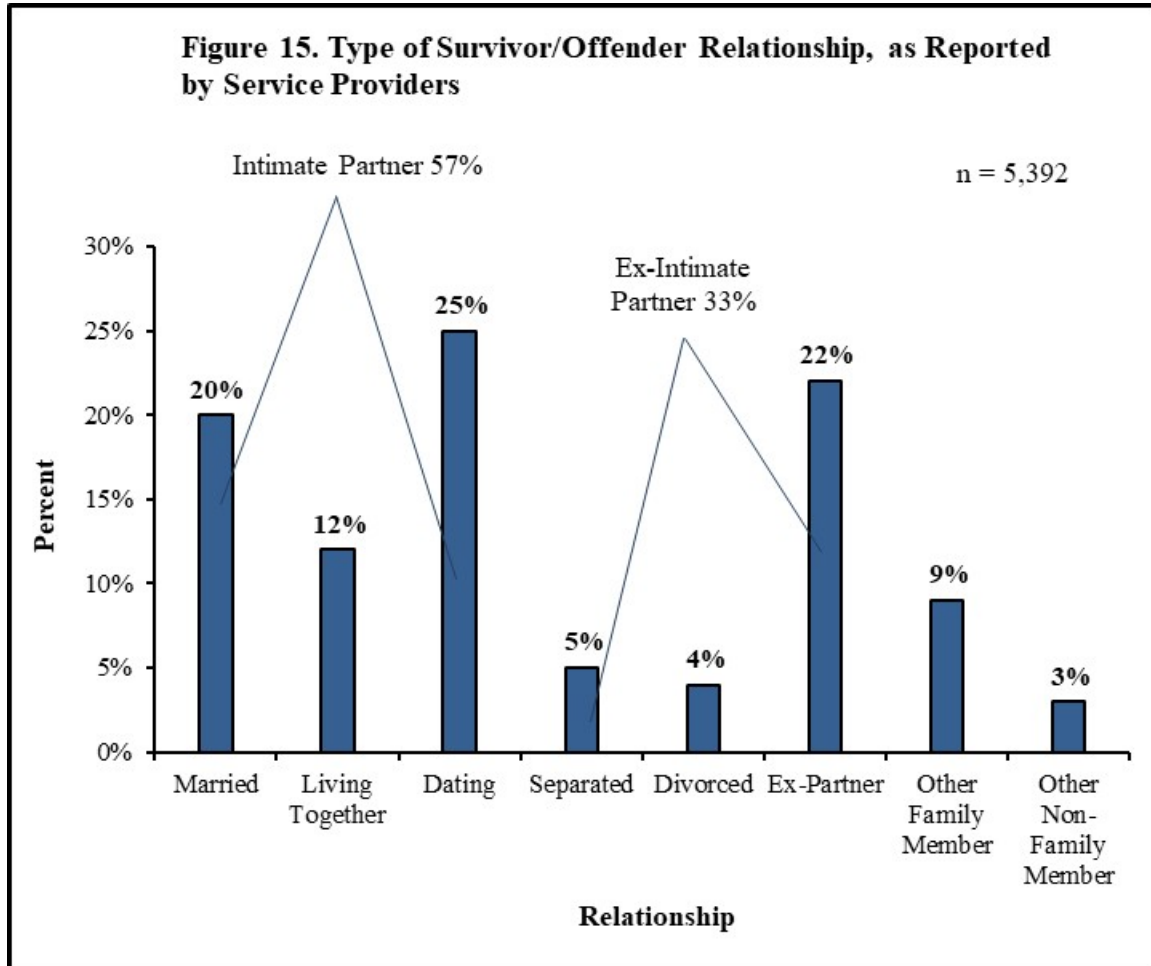

N. Victim/Suspect Relationship

Of 20,968 suspects reported by law enforcement, their relationship to the victim was documented among 14,643. Of these, a total of 41% were *boyfriend/girlfriend* and 4% *ex-boyfriend/ex-girlfriend*. *Relatives* accounted for 25% of identified victim/suspect relationships. The victim/suspect relationship in 15% was a *spouse*, (10%) an *ex-spouse*, 1% (80) *gay partner*, and 0.1% (13) *gay ex-partner*. See **Figure 14**.

The victim/offender relationship was documented in 5,392 service provider reports. Over half (57%) of offenders were intimate partners of their victims with the following relationship descriptions: married (20%), living together (12%) or dating (25%). One-third (31%) of offenders were ex-intimate partners of their victims, with the following relationship descriptions: separated (5%), divorced (4%), or ex-partner (22%). Another 9% of offenders were a family member of the victim, and 3% other known, non-family members of the victim. See **Figure 15**.

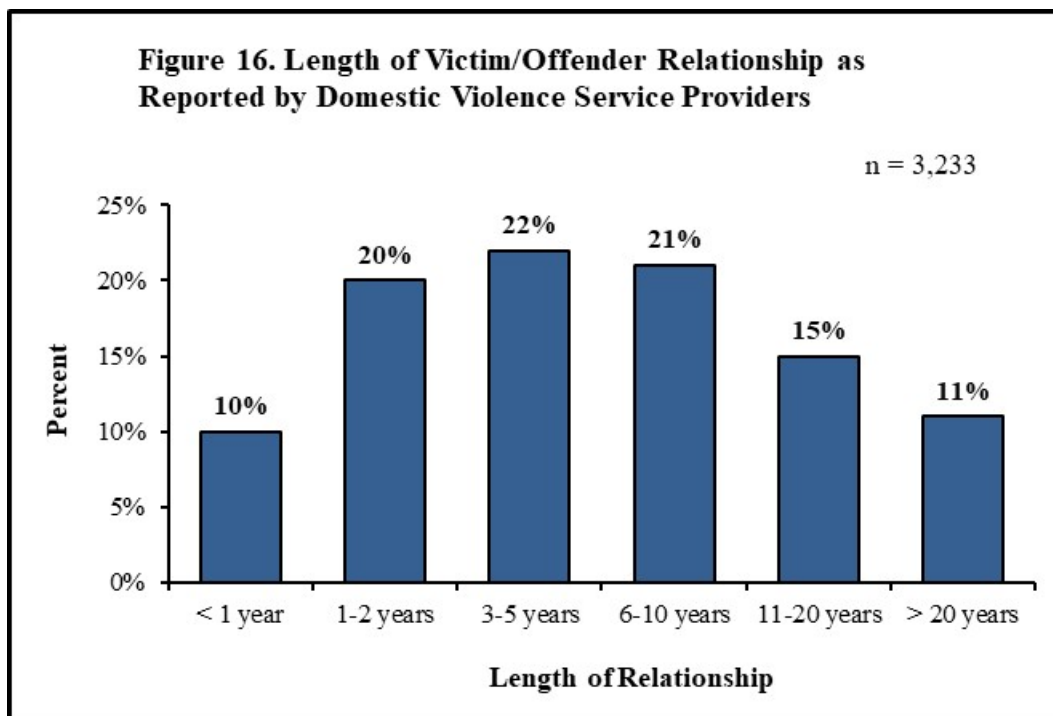

O. Length of Victim/Offender Relationships

There were 3,233 reports that documented the length of relationship between the victim and offender. Most victims reported a relationship duration of 3-5 years (22%), followed by those in a relationship for 6-10 (21%), 1-2 years (20%), 11-20 years, (15%), over 20 years (11%), and <1 year (10%). See **Figure 16**.

P. Victims and Offenders Abused As Children

In 2021, there were 549 offender reports that documented past abuse. Of these, 42% (233) of offenders reported experiencing abuse as a child. See **Figure 17**.

Past victim abuse and/or the witnessing of abuse as a child was documented in 2,409 adult victim provider reports. Half (54%) of adult victims reported experiencing abuse as a child. Refer to Figure 17. Additionally, 64% adult victims reported experiencing at least one prior domestic violence incident as an adult.

Q. Crises/Hotline Calls

Service providers throughout the state responded to 15,187 crisis/hotline calls, a 53% increase over the number fielded in 2020 (9,914). The *Domestic Violence Resource Center* (Albuquerque) responded to the

most crisis calls, 42% (6,450), followed by *SAFE House* (Albuquerque) (1,414) and *Esperanza* (1,335) (9%, respectively), *Community Against Violence* 6% (893), and *Haven House*, 5% (709). See **Table 18** for the number of crises calls by service provider agency. See **Table 19** for the number of crises calls by county.

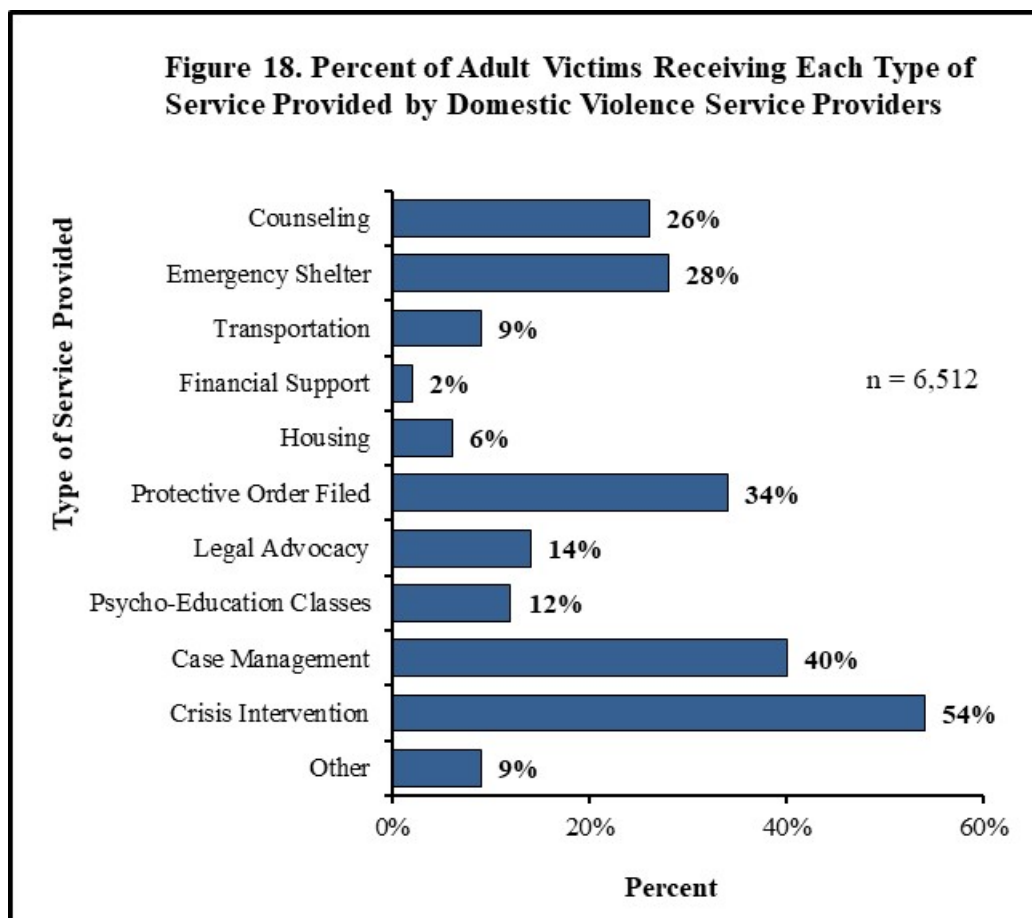

- Crisis/Hotline Calls By Agency **Table 18**
- Crisis/Hotline Calls by County **Table 19**
- Five-Year Trends in the Number of Crises/Hotline Calls for Each County **Section 3F**

R. Sources of Adult Victims' Referrals for Help and the Services They Receive

Of 5,505 referrals documented, most adult victims were self-referred (30%) or referred by law enforcement (29%) to service providers. Clients and relatives referred 6%, respectively. Seventeen percent were referred by unspecified "other" sources. See **Table 20**.

- Sources of Adult Victim Referrals and the Number Referred from Each **Table 20**

The service that most adult victims received was crisis intervention (54%), followed by case management (40%), orders of protection (34%), emergency shelter (28%), counseling (26%), legal advocacy (14%), psycho-education classes (12%), transportation (9%), housing (6%), and financial assistance (2%). See **Figure 18**.

► Five-Year Trends in the Number of Adult Victims Served And the Number Receiving Each Service for Each County

Section 3G

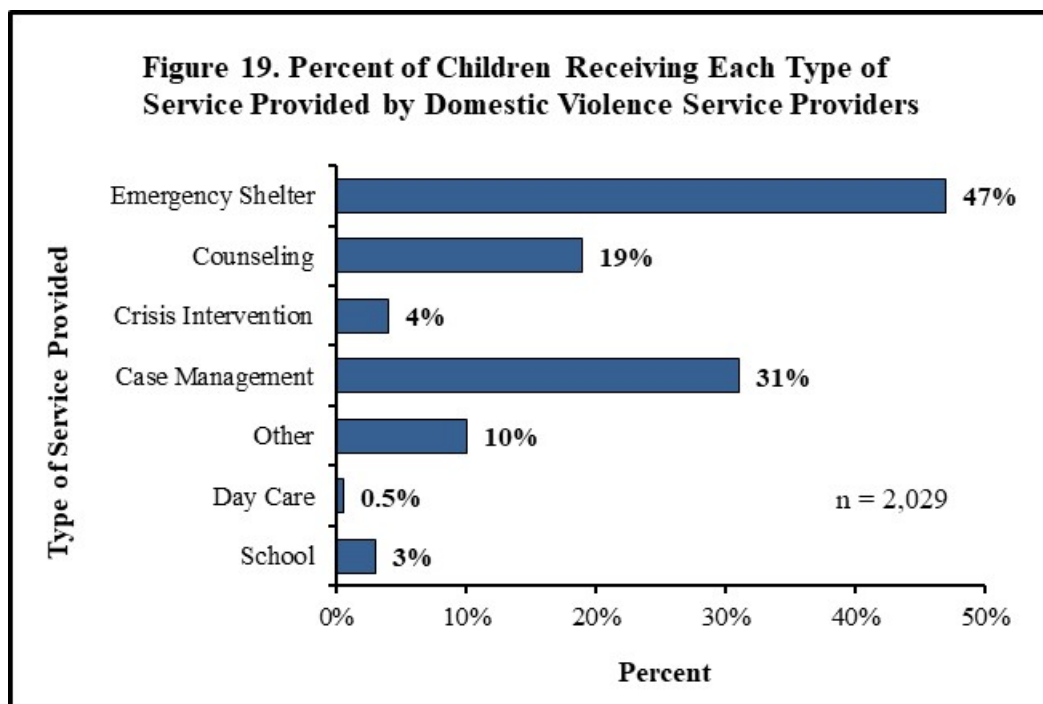

S. Sources of Child Referrals for Help and Services They Receive

Of 1,157 child referrals, most (74%) were referred by a relative, followed by those who were self-referred (7%) or referred by law enforcement (6%). Another 7% were referred by unspecified “other” sources.

► Sources of Children Referrals and the Number Referred from Each.

Table 21

The specified service that most children received was emergency shelter (47%), followed by case management (31%), and counseling (19%). See **Figure 19**.

► Five-Year Trends in the Number of Children Served And the Number Receiving Each Service for Each County

Section 3H

T. Sources of Offender Referrals for Help and Services They Receive

Of 652 offender referrals, most (84%) were referred for services by adult court, followed by CYFD-CPS (5%), law enforcement (4%), or self-referred (3%).

► Sources of Offender Referrals and the Number Referred from Each

Table 22

Most (65%, respectively) offenders received counseling services and case management services. Forty-three percent received psycho-educational classes and 5% of offenders received “other” unspecified services. See **Figure 20**.

- Five-Year Trends in the Number of Offenders Served And the Number Receiving Each Service for Each County

Section 3I

U. Adult Victims Who Sought Help and Reported Their Domestic Violence Incidents to Police

There were 4,068 reports that identified victim-reporting to law enforcement. Of these, 50% (2,021) reported their domestic violence incident to law enforcement.

- Percent Domestic Violence Incidents Reported to Law Enforcement by Service Provider Agency

Table 23

V. Law Enforcement-Reported Domestic Violence Incidents that Resulted in a Suspect Arrest

- Number of Law Enforcement-Reported Domestic Violence Incidents Documenting Arrest Status 16,623
- Number with a Suspect Arrest 8,805 (53%)
- Number of Domestic Violence Incidents with No Arrest 7,823 (47%)
- Domestic Violence Arrest Rates of All Law Enforcement Agencies **Table 24**
- Domestic Violence Arrest Rates for All Counties **Table 25**

- Five-Year Trends in the Percent of Suspect Arrests for Each County

Section 3J

W. Adult Victims of Domestic Violence Who Filed A Protection Order

- Number of Law Enforcement-Reported Domestic Violence Cases 20,776
- Number of Cases for Which a Protection Order was Issued in District Courts 6,342 (30.5%)

► Number of Cases for Which a Protection Order was Issued in District Courts by County

Table 26

In counties with the most complete reporting (those with the law enforcement agency from the largest city in the county reporting) and with a minimum of 20 cases, a comparison was made between the number of protection orders filed in district courts in each county and the number of domestic violence cases reported to law enforcement in each county. Lea County had the highest number of protection orders filed in district court relative to the number of domestic violence incidents reported by law enforcement (115%), followed by San Miguel County (79%), Taos County (76%) and Quay and Cibola counties (74%, respectively). McKinley County had the fewest number of protection orders filed in district court relative to the number of domestic violence incidents reported by law enforcement (12%), followed by Lincoln County (15%), and Dona Ana County (16%). See **Table 27**.

► Percent Law Enforcement Incidents Represented by District Court Protection Orders Issued for All Counties

Table 27

► Five-Year Trends on the Percent of Law Enforcement-Reported Domestic Violence Incidents Represented by District Court Protection Orders Issued for Each County

Section 3K

► Total Number of Domestic Violence-Related Protection Orders Issued in District Courts in 2021, by County

Table 28

Service Providers assisted domestic violence victims in filing 10% (2,204) of the total 14,065 protection orders issued by district courts in 2021.

IV. DISTRICT AND MAGISTRATE COURT FINDINGS

In 2021, the Central Repository in collaboration with the Administrative Office of the Courts (AOC), was able to identify and extract valuable district and magistrate court data and the type of disposition outcomes for domestic violence cases. County totals on domestic violence cases filed, and conviction and dismissal rates on domestic violence cases disposed in district and magistrate courts for 2021, are found in *Section Three, Tables L - O*.

Additionally in 2021, the Central Repository has obtained new cases of *false imprisonment*, as well as *harassment*, *stalking*, and *aggravated stalking* where the domestic relationship, while likely, could not be confirmed from the documentation provided from the courts. As court data offer the best measure of false imprisonment, harassment, and stalking/aggravated stalking cases, these data are presented separately.

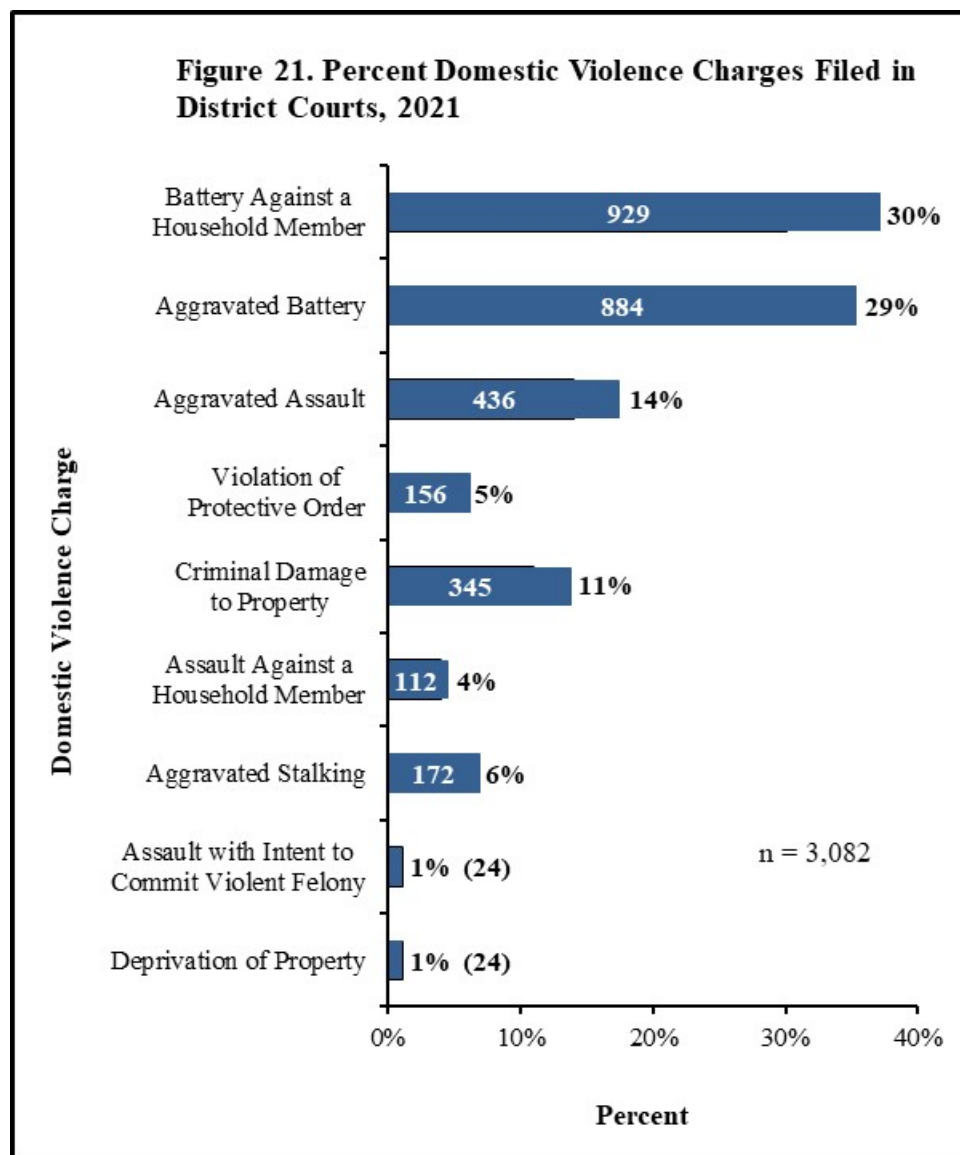

A. District Courts

1. New Domestic Violence Charges and Cases Filed in District Courts, 2021

There were a total of 3,082 domestic violence charges filed in 1,906 new cases of domestic violence in New Mexico district courts, in 2021. This represents a 19% increase over the number of cases filed in 2020 (1,604) and a 3% increase over the number of domestic violence cases filed pre-COVID-19, in 2019 (1,851). See **Appendix J** for a list of participating statewide district courts. All charges/cases are against a household member.

Most (15%, respectively) of all the domestic violence cases filed in 2021, were filed in Bernalillo and Dona Ana counties. San Juan County comprised 10% of domestic violence cases filed in 2021, followed by Curry County (6%) and Chaves, Santa Fe, and Valencia counties (5%, respectively). See **Table 29**.

Battery comprised most (30%) of the filed charges, followed by *aggravated battery* (29%), *aggravated assault* (14%), *criminal damage to property* (11%), *aggravated stalking* (6%), *violation of a protective order* (5%), *assault* (4%), *deprivation of property* and *assault with intent to commit a violent felony* (1%, respectively). See **Figure 21**.

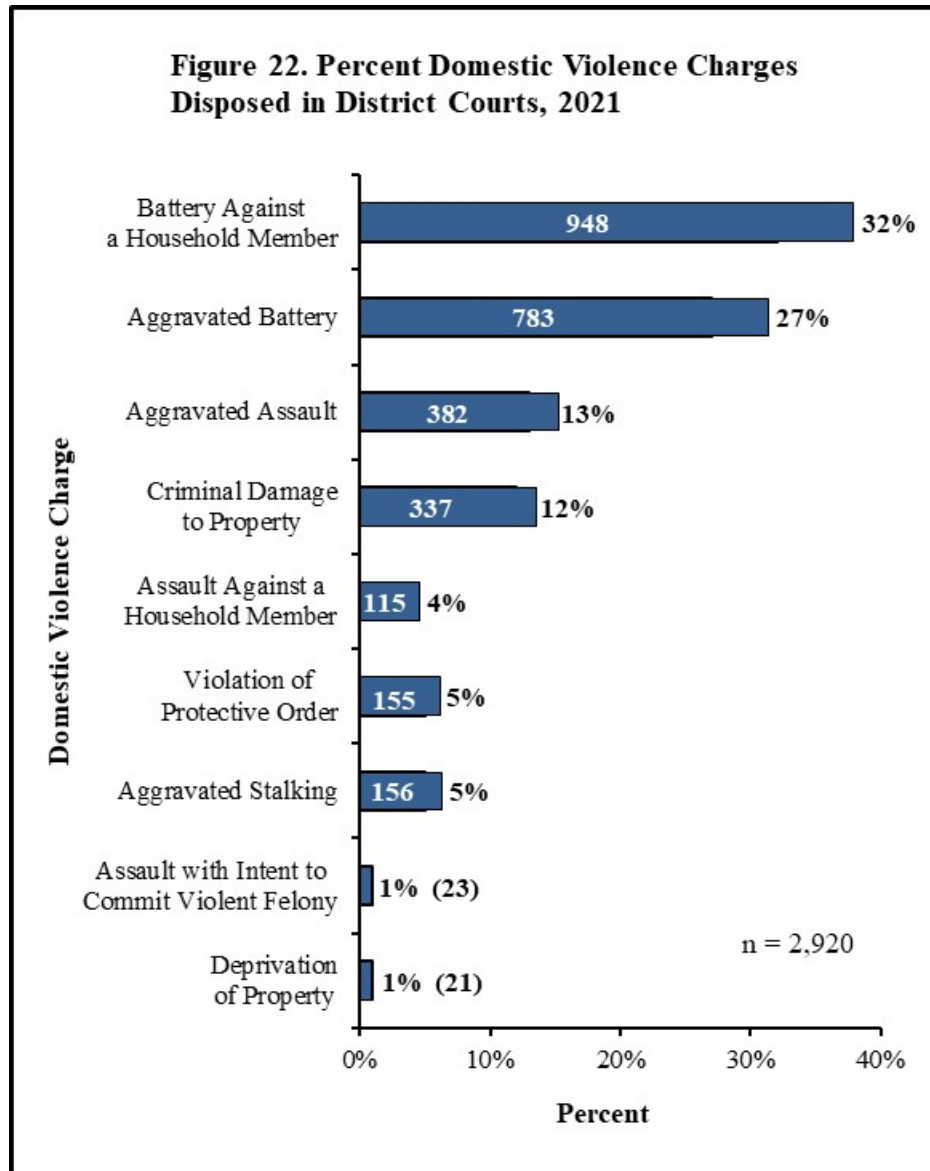

2. Domestic Violence Charges and Cases Disposed in District Courts, 2021

There were 2,920 domestic violence charges disposed in 1,881 cases of domestic violence in New Mexico district courts, in 2021. This represents a 32% increase over the number of cases disposed in 2020 (1,422) and a 5% increase over the number of domestic violence cases disposed in pre-COVID-19, 2019 (1,785).

Most (17%) domestic violence cases in district courts in 2021, were disposed in Bernalillo County. Dona Ana County comprised 12% of disposed domestic violence cases, followed by San Juan County (9%), Curry County (7%), Chaves County (6%), and Santa Fe and Valencia counties (5%, respectively). **See Table 30.**

Of the disposed domestic violence charges, most (32%) were *battery*, followed by *aggravated battery* (27%), *aggravated assault* (13%), and *criminal damage to property* (12%). See **Figure 22** for the proportion of each type of domestic violence crime disposed in 2021.

3. Dispositions of Domestic Violence Cases Disposed in District Courts, in 2021

Of the 1,881 cases of domestic violence disposed in district courts in 2021, 27% (509) obtained a guilty plea/conviction, 1% (13) obtained an acquittal, 53% (1,004) were dismissed, and 19% (355) had

prosecution proceedings that resulted in “other” dispositions (conditional discharges, remands, consent decrees, deferred cases, and transferred cases). See **Figure 23**.

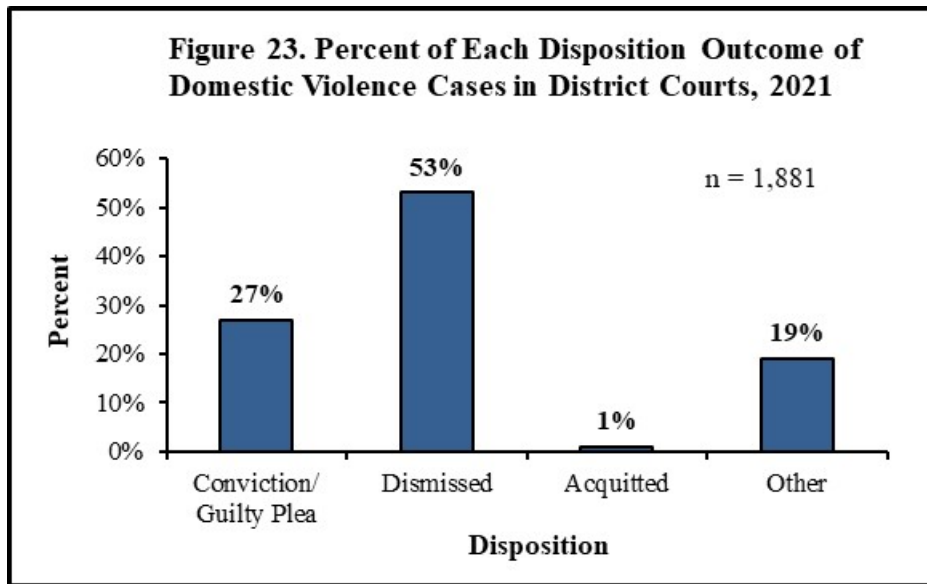

Table 31 illustrates the number of cases dismissed, convicted, and acquitted for each district court.

An examination of dismissed cases by district court (among courts with 10 or more domestic violence cases) shows that Estancia District Court had the highest dismissal rate of their disposed domestic violence cases (88%), followed Los Lunas District Court (70%), Albuquerque and Lovington district courts (69%, respectively), Las Cruces District Court (64%), and Grants District Court (60%). See **Table 32** for the percent of domestic violence cases dismissed for all District Courts, in 2021.

Similarly, an examination of cases that obtained a guilty plea/conviction by district court (among courts with 10 or more domestic violence cases) shows that Clayton District Court had the highest conviction rate of their disposed domestic violence cases (43%), followed by Tucumcari District Court (42%), and Alamogordo District Court (41%). Conversely, Tierra Amarilla District Court had the fewest domestic violence cases with a conviction (3%), followed by Estancia District Court (6%), Las Cruces District Court (15%), Albuquerque District Court (16%), and Las Vegas District Court (18%). See **Table 33** for the percent of domestic violence cases with a conviction/guilty plea for all district courts, in 2021.

4. District Court Protection Orders Issued

In 2021, there were 14,065 protection orders issued by statewide district courts for one or more parties involved in 6,432 new domestic violence-related cases. The total number of orders of protection issued represents a 12.5% decrease from the number issued in 2020 (16,072). The number of domestic violence-related cases for which an order of protection was issued represents a 15% decrease from the number of the cases in 2020 (7,551). Of the protection orders issued, 2% (257) were emergency protection orders, 80% (11,255) were domestic violence temporary orders of protection, and 18% (2,553) were judgments for permanent protection orders.

Of the 257 emergency protection orders issued in 2021, most (42%) (109) were issued in Bernalillo County, followed by Dona Ana County, 21% (53), Sandoval County, 17% (43), Santa Fe County, 5% (13), and Taos County, 4% (11). See **Table 34** for a list of emergency protection orders issued by each county.

Of the 11,255 judgments for temporary protection orders issued in 2021, most (33%) (3,679) were issued by Bernalillo County, followed by Lea County, 11% (1,245), Sandoval (823) and Otero (806) counties (7%, respectively), and Santa Fe (575) and San Juan (516) counties (5% respectively). See **Table 35** for a list of temporary protection orders issued by each county.

Of the 2,553 judgments for permanent orders of protection issued in 2021, most (32%) (807), were issued by Bernalillo County. Lea County issued 9% (224) of all permanent protection orders, followed by Valencia County, 8% (204), Dona Ana County, 7% (176), Santa Fe County, 6% (158), and San Juan County, 5% (119). See **Table 36** for a list of domestic violence permanent orders of protection issued by county.

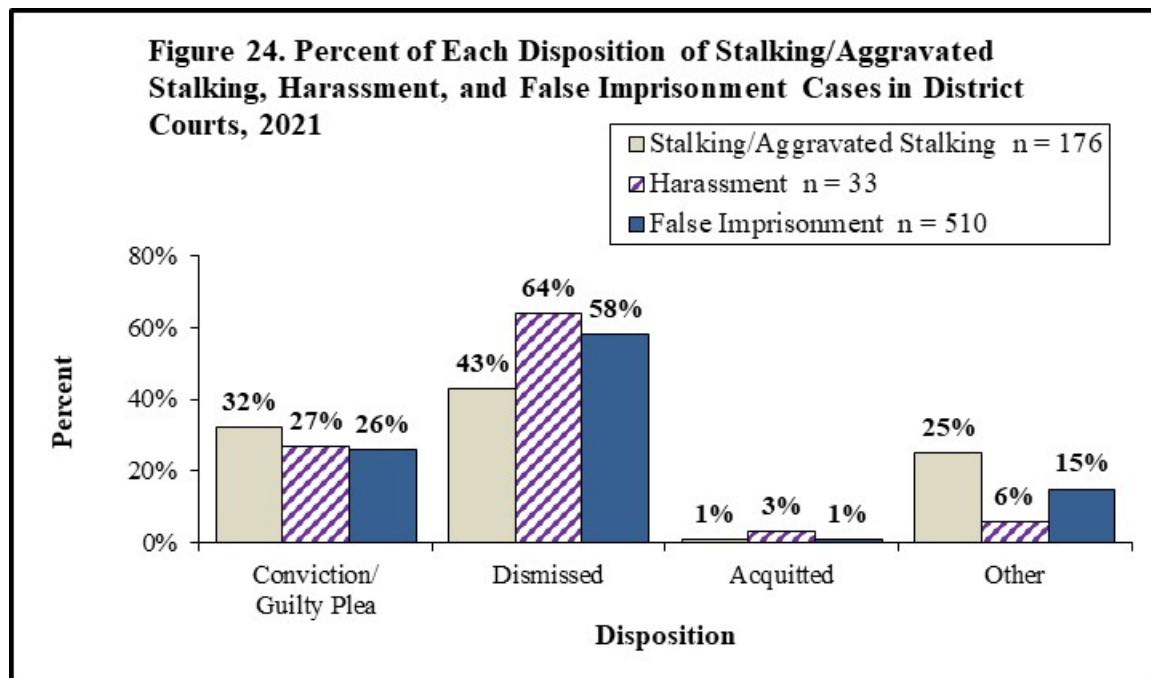

5. Harassment, Stalking/Aggravated Stalking, and False Imprisonment Cases Filed in District Courts, 2021

While most harassment, stalking/aggravated stalking, and false imprisonment charges/cases are domestic-related, in some of the district court cases of these offenses, the victim/offender relationship was not documented to determine whether the offense was domestic in nature. However, the total number of all stalking/aggravated stalking cases, harassment cases, and false imprisonment cases are being presented to provide a more credible source than law enforcement-reported data on the annual incidents of reported harassment, stalking/aggravated stalking, and false imprisonment crimes.

There were 461 false imprisonment cases in 2021, a 10% increase from 2020 (420); 23 harassment cases in 2021, a 15% decrease from 2020 (27); and 194 stalking/aggravated stalking cases in 2021, a 44% increase from 2020 (135). See **Table 37** for the number of new cases of these crimes filed in each district court.

6. Stalking and Aggravated Stalking Cases Disposed in District Courts, 2021

There were 176 stalking/aggravated stalking cases disposed in statewide district courts, in 2021. This represents a 102% increase over these crimes disposed in 2020 (87) when the courts were operating under COVID-19 restrictions. Albuquerque District Court comprised 12% (21) of all the district courts' stalking and aggravated stalking cases that were disposed, followed by Las Cruces District Court, 10% (18), and Aztec/Farmington and Santa Fe district courts, 9% (15), respectively. See **Table 38** for the number of stalking/aggravated stalking cases disposed by each district court. Forty-three percent (75) of stalking/aggravated stalking cases were dismissed, 32% (57) obtained a conviction, 1% (2) obtained an acquittal, and 25% (44) resulted in other dispositions (deferred, bind-over, transferred, and conditional discharge cases). See **Figure 24**.

7. Harassment Cases Disposed in District Courts, 2021

There were 33 harassment cases disposed in statewide district courts, in 2021. This represents a 14% increase from these crimes disposed in 2020 (29). Over one-quarter, 27% (9) were disposed in Las Cruces District Court, followed by 15% (5) in Albuquerque District Court, 12% (4) in Clayton District Court, and 9% (3) in Taos. See **Table 39** for the number of harassment cases disposed by each district court. Two-thirds (64%) (21) of the harassment cases disposed in district courts were dismissed, 27% (9) obtained a conviction, 3% (1) obtained an acquittal, and 6% (2) resulted in “other” dispositions (deferred, bind-over, transferred, and conditional discharge cases). Refer to Figure 24.

8. False Imprisonment Cases Disposed in District Courts, 2021

There were 510 false imprisonment cases disposed in statewide district courts, in 2021. This represents a 37% increase over these crimes disposed in 2020 (373). Albuquerque District Court comprised 20% (104) of the false imprisonment cases that were disposed, followed by Las Cruces District Court, 10% (53), and Aztec/Farmington District Court, 8% (42). See **Table 40** for the number of false imprisonment cases disposed by each district court.

Of the 510 false imprisonment cases disposed in district courts, 58% (298) were dismissed, 26% (132) obtained a conviction, and 1% (5) obtained an acquittal. The remaining 15% (75) were cases with “other” dispositions (conditional discharges, deferred, bind-over, and remand cases), all of which demonstrated prosecution proceedings that did not result in a dismissal, conviction, or acquittal. Refer to Figure 24.

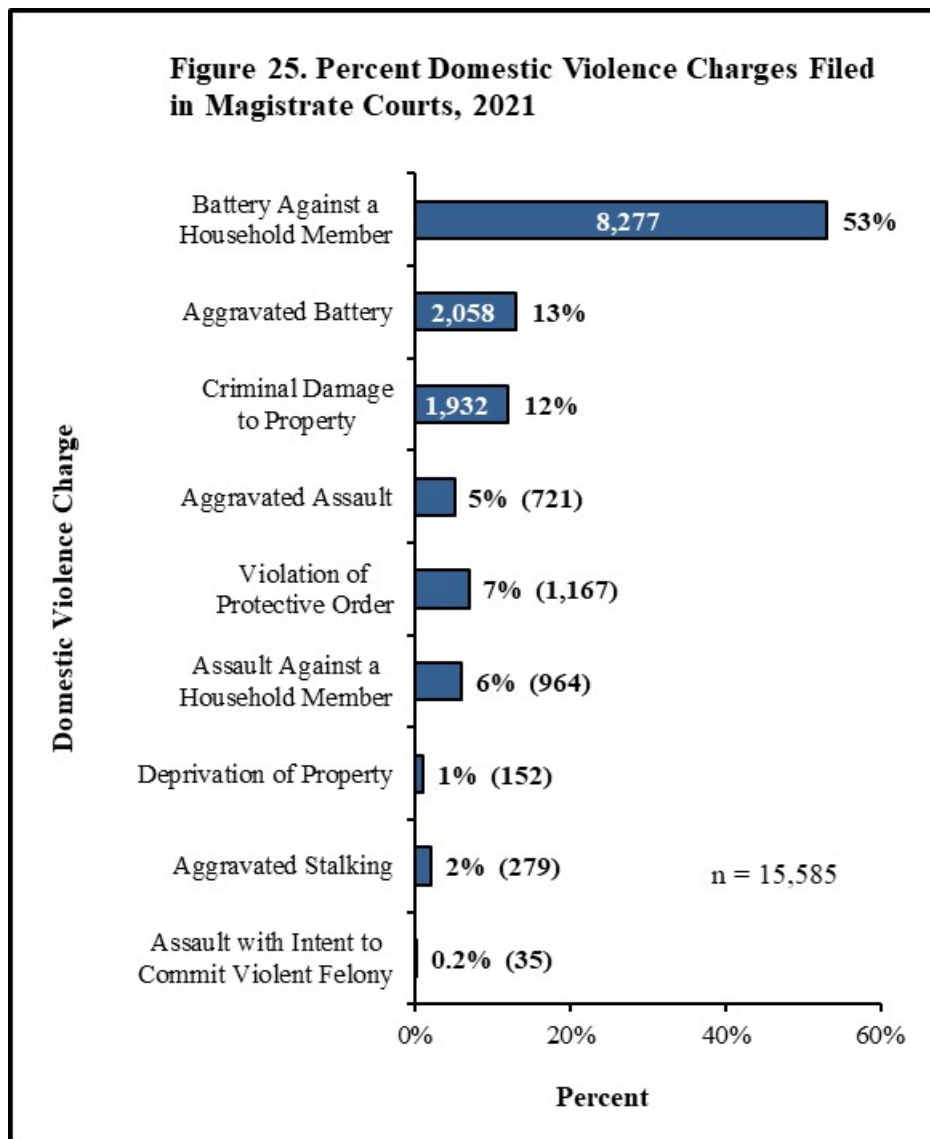

B. Magistrate Courts

1. New Domestic Violence Charges and Cases Filed in Magistrate Courts, 2021

There were a total of 15,585 domestic violence charges filed in 12,514 new cases of domestic violence in New Mexico magistrate courts, in 2021. This represents a 6% decrease from cases filed in Magistrate Courts in 2020 (13,183). See **Appendix K** for a list of participating magistrate courts. All cases/charges are against a household member.

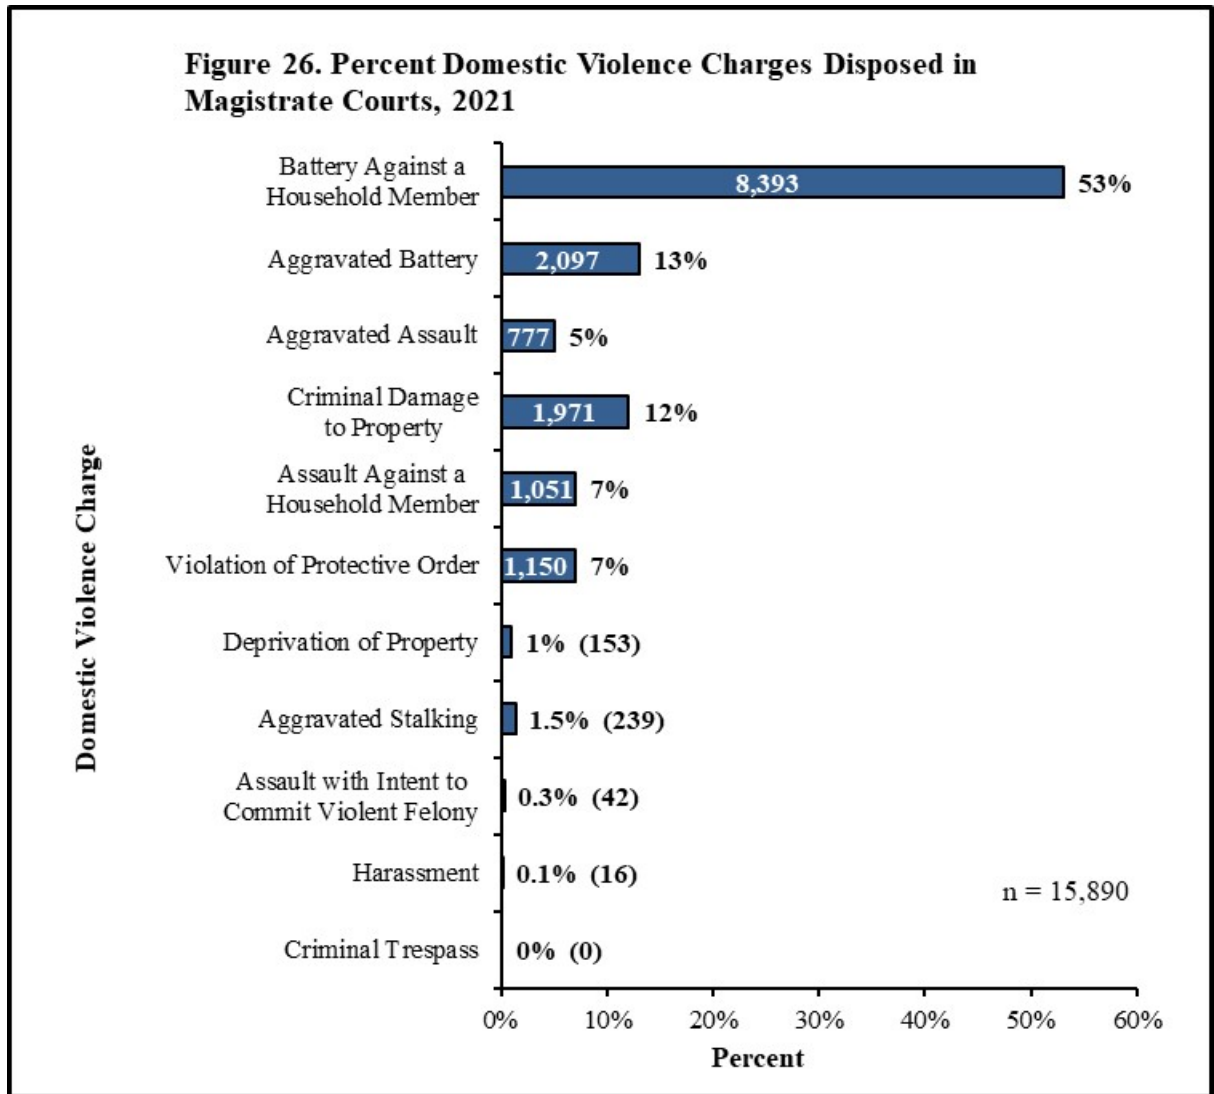

Bernalillo County comprised most (33%) of all the magistrate-metropolitan court domestic violence cases filed, followed by Dona Ana County (11%), San Juan County (9%), and Santa Fe County (6%). See **Table 41** for the proportion of new cases filed by each county.

Battery comprised most (53%) of the new charges filed, followed by *aggravated battery* (13%), *criminal damage to property* (12%), *violation of a protection order* (7%), *assault* (6%), *aggravated assault* (5%), *aggravated stalking* (2%), *deprivation of property* (1%), and *assault with intent to commit a violent felony* (0.2%). See **Figure 25**.

2. Domestic Violence Cases Disposed in Magistrate Courts, 2021

There were 15,890 domestic violence charges disposed in 12,925 cases of domestic violence in magistrate courts, in 2021. The 12,925 cases represent a 9% increase over the number of cases disposed in 2020 (11,883). Of the disposed domestic violence charges, most (53%) were *battery*, followed by *aggravated battery* (13%), *criminal damage to property* (12%), and *assault and violation of a protective order* (7%, respectively). See **Figure 26** for the proportion of each type of domestic violence charge disposed in 2021.

Bernalillo County comprised most (35%) of all the magistrate court domestic violence cases disposed in 2021, followed by Dona Ana and San Juan counties (9%, respectively), and Santa Fe and Sandoval counties (5%, respectively). See **Table 42** for the proportion of cases disposed by each county.

Of the 12,925 domestic violence cases disposed in magistrate courts, 82% (10,604) were dismissed, 0.4% (52) were acquitted, and 5% (678) obtained a guilty plea/conviction. The remaining 12% (1,591) were cases with “other” dispositions (deferred, transferred, bind over, and conditional discharge cases) which demonstrated prosecution proceedings that did not result in a dismissal, conviction, or acquittal. See **Figure 27**.

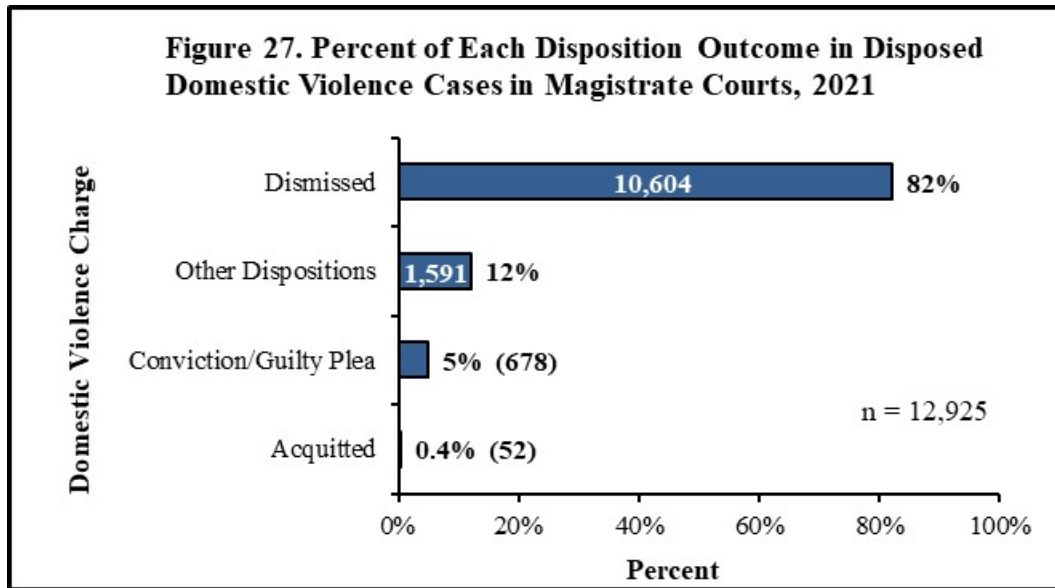

Table 43 illustrates the number of cases dismissed, convicted, acquitted, and other disposition outcomes for each magistrate court.

An examination of dismissed cases by magistrate courts (among courts with 10 or more domestic violence cases) shows that Chama Magistrate Court had the highest dismissal rate of their disposed domestic violence cases (100%). The following magistrate courts had a dismissal rate of 90% or higher: Cuba Magistrate Court (93%), Anthony Magistrate Court and Albuquerque Metro Court (92%, respectively), and Lovington and Bernalillo magistrate courts (91%, respectively). Conversely, Clayton Magistrate Court had the fewest dismissals (36%), followed by Tucumcari Magistrate Court (37%). See **Table 44**.

Similarly, an examination of cases that obtained a guilty plea/conviction by magistrate court (among courts with 10 or more domestic violence cases) shows that Alamogordo and Santa Rosa magistrate courts had the highest conviction rate of their disposed domestic violence cases (28%, respectively), followed by Bayard Magistrate Court (27%), Tucumcari Magistrate Court (25%), and Lordsburg Magistrate Court (21%). Conversely, Chama, Cuba, Eunice and Mora magistrate courts had the fewest domestic violence cases with a conviction (0%), followed by Albuquerque Metropolitan Court and Espanola, Lovington, and Bernalillo magistrate courts (1%, respectively). See **Table 45**.

3. Harassment, Stalking/Aggravated Stalking, and False Imprisonment Charges and Cases Filed in Magistrate Courts, 2021

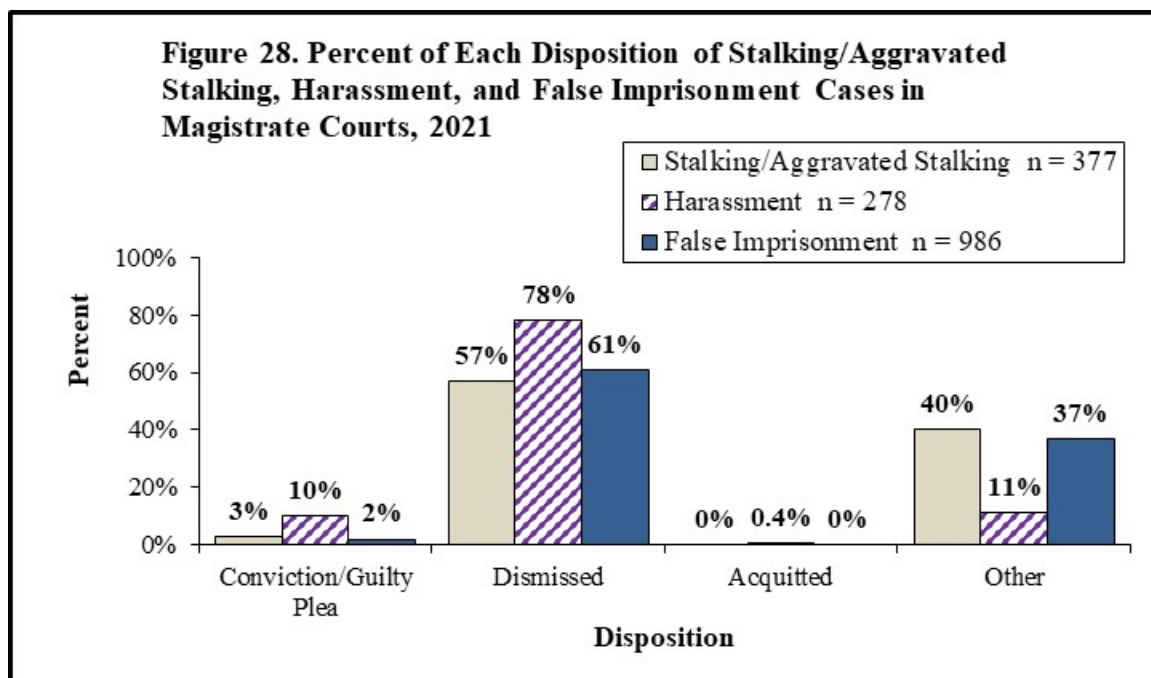

As discussed with the district courts, while most harassment, stalking/aggravated stalking, and false imprisonment charges/cases are domestic-related, in some of the magistrate court cases of these offenses,

the victim/offender relationship was not documented to determine whether the offense was domestic in nature. However, the total number of all stalking/aggravated stalking cases, harassment cases, and false imprisonment cases are being presented to provide a more credible source than law enforcement-reported data on the annual incidence of reported harassment, stalking/aggravated stalking, and false imprisonment crimes.

Over all, there were 975 false imprisonment cases, 252 harassment cases, and 402 stalking/aggravated stalking cases filed in magistrate courts, in 2021. To see the number of cases for each of these crimes filed in each magistrate court, see **Table 46**.

4. Harassment, Stalking/Aggravated Stalking, and False Imprisonment Cases Disposed in Magistrate Courts, 2021

There were 377 stalking/aggravated stalking cases that were disposed in statewide magistrate courts, in 2021. This represents a 32% increase over the number of stalking/aggravated stalking cases disposed in 2020 (285). Albuquerque Metro Court comprised 20% (74) of all the magistrate court stalking and aggravated stalking cases that were disposed, followed by 9% respectively, by Las Lunas (34), Las Cruces (34) and Bernalillo magistrate courts (33), and 5% respectively, Carlsbad (20), Santa Fe (18) and Farmington (17) magistrate courts. See **Table 47** for the number of disposed stalking/aggravated stalking cases for each magistrate court. Over half (57%) (216) of stalking/aggravated stalking cases were dismissed, 3% (10) obtained a conviction, and 40% (115) resulted in “other” dispositions (deferred, bind-over, transferred, and conditional discharge cases). There were no acquittals of stalking/aggravated stalking cases in magistrate courts. See **Figure 28**.

There were 278 harassment cases disposed in statewide magistrate courts, in 2021. This represents a 7% increase over the number of harassment cases disposed in 2020 (259). One-third (34%) (95) were disposed in Albuquerque Metro Court, followed by Las Cruces Magistrate Court, 12% (33), and 5%

respectively, by Grants (14) and Santa Fe (13) magistrate courts. See **Table 48** for the number of harassment cases disposed by each magistrate court in 2021. Over three-quarters (78%) (217) of harassment cases disposed in magistrate courts were dismissed, 10% (29) obtained a conviction, 0.4% (1) obtained an acquittal, and 11% (31) resulted in “other” dispositions (deferred, bind-over, transferred, and conditional discharge cases). Refer to Figure 28.

There were 986 false imprisonment cases disposed in statewide magistrate courts, in 2021. This represents a 2% increase over the number of false imprisonment cases disposed in 2020 (967). Albuquerque Metro Court comprised 30% (292) of the false imprisonment cases that were disposed, followed by Santa Fe Magistrate Court, 7% (67), Farmington Magistrate Court, 6% (60), and 5% respectively, by Las Cruces (52), Gallup (50), and Los Lunas (47) magistrate courts. See **Table 49** for the number of false imprisonment cases disposed by each magistrate court in 2021.

Of the 986 false imprisonment cases disposed in magistrate courts, 61% (600) were dismissed, 2% (24) obtained a guilty plea/conviction, 0% obtained an acquittal, and 37% (362) resulted in “other” dispositions (bind-over, transferred, deferred, and conditional discharge cases) which demonstrated prosecution proceedings that did not result in a dismissal, conviction, or acquittal. Refer to Figure 28.

SECTION THREE: IMPLICATIONS OF THE FINDINGS AND RECOMMENDATIONS FOR PREVENTION AND IMPROVED SYSTEM RESPONSE

A. Identifying Children at Risk

Service providers reported that children were present at one out of every five domestic violence incidents in 2021, and 78% of them were under the age of twelve. The ASD revealed that children who witness abuse are four times more likely to experience child abuse than children who do not witness abuse. It further found that most (62%) abused children experienced multiple types of abuse, most typically at the hands of a family member (84%); and those abused as children have poorer health outcomes. Survivors abused as children compared to those not abused were six times more likely to be abused as an adult, four times more likely respectively, to be told they have a mental illness and attempt suicide, and three times more likely respectively, to think about suicide and be told they have a substance abuse problem. The children served by statewide service providers (2,029) represent 34% of the number present at the scene of domestic violence incidents as reported by law enforcement (5,918). These numbers represent only children in domestic violence cases that are reported. With so much at stake, it is imperative that greater effort be made (protocols for coordinated community response and systems put in place) to better identify children that witness child abuse and ensure participation in appropriate counseling services for assessment and treatment.

B. Poverty and Violence

Most of the battered women who go to a domestic violence service provider for shelter and/or other services are poor. Since there is no way to capture the number of survivors with financial means who access private services, and/or who travel out of state for services, it is not possible to determine the true proportion of survivors among all battered women who are poor. However, the ASD found that most unmarried survivors with children and those without children who went for domestic violence services in New Mexico meet federal poverty level requirements for 150% and 133% of income, as well as the more restrictive federal poverty income level.

Almost two-thirds (60%) of survivors reported that they left a violent relationship at some time. Of these, one-third (32%) reported that they returned. Reasons for returning to their abuser in the order of most mentions include, returned: *to try to work it out*, *for the children*, and *because I was scared*. A central core of the consideration for returning “for the children” is finances. Among the descriptions for scared is “no support/lack of resources”. Indeed, the ASD revealed that survivors who left a violent relationship and did not return had a median annual income \$2,080 greater (\$12,000) than those who left and returned (\$9,920). It further found that only 42% of survivors who are eligible/receive Medicaid/TANF assistance live in their own apartment or home. Most live in shelter (23%), with a friend (29%), transitional housing (1%), or on the street (3%).

Of survivors who were involved in a prior domestic violence experience, 43% reported that they live with an offender with whom they have had a prior domestic violence incident. When examined by income, survivors who live with an offender with whom they have had a prior domestic violence experience had a median annual income of \$2,400 less (\$9,600) than survivors who do not live with an offender with whom they have had a prior domestic violence experience (\$12,000).

All of this points to the reality of the role that poverty plays in an individual’s vulnerability to living with violence. Greater emphasis must be focused on providing basic housing, food, clothing, transportation, and access to employment and health care for victims and their families to allow them to leave and stay away from a violent environment.

C. Injury Risk Factors

Law enforcement agencies reported that 41% of the domestic violence incidents in 2021, involved injury to the victim. They do not document or report injury to children. Service providers reported that 35% of adult survivors and 25% of children were injured in domestic violence cases that came to their attention.

Nationally, one-third (35.3%) of women reported being injured by an intimate partner in their lifetime; and 1.3% were injured in the previous twelve months. Among injured women, 13.9% needed medical care. (NISVS, 2022). Similarly, 21% of men nationally, reported being injured by an intimate partner in their lifetime; and 1.0% were injured in the previous twelve months. Among injured men, 4.3% needed medical care. (NISVS, 2022).

In New Mexico, findings from the ASD found that among the types of abuse reported by the 89% of survivors who reported abuse by an intimate partner, are *physical attack* (60%), *physical restraint* (29%), *threatened to be harmed or killed* (34%), *strangulation* (12%), *sexual assault* (11%) and *involvement of a lethal weapon* (12%). Twenty percent of children present during these abusive incidents suffered the same types of abuse.

The ASD revealed that survivor risk of injury increased among survivors: a) with a substance abuse problem; b) with a mental illness; c) involved in a prior domestic violence incident; d) ever abused while pregnant; e) who are female; or f) who are Native American. This information has implications for law enforcement for assessing risk of harm to the survivor and children at the scene, and for service providers when developing safety plans with survivors.

D. Evidence Supporting the Focus on Early Intervention to Prevent Domestic Violence

In 2021, almost three-quarters (71%) of the law enforcement incidents documenting the victim/offender relationship, were perpetrated by a current or former intimate partner, half (46%) of these by current or former boyfriends/girlfriends who are or were dating or living together. Similarly, 79% of adult victims who sought services from a domestic violence service provider were assaulted by a current or former intimate partner, 37% of these were dating or living together. The NISVS State Report found that 37.3% of women and 33.3% of men in New Mexico were victims of intimate partner violence in their lifetime. Further, nationally 7.1% of women who were victims of intimate partner violence in their lifetime and 3.7% of men who were victims of intimate partner violence in their lifetime were victimized before age 18. In New Mexico, 6.9% of women who were victims of intimate partner violence in their lifetime were victimized before age 18. Further, stalking behaviors begin in adolescence and the reported incidence of adolescent stalking is almost twice that of adolescent intimate partner violence. The NISVS updated 2015 data found that half (54.1%) of females who were stalked in their lifetime were stalked before age 25, 21.2% before age 18. Similarly, it found that 41% of males were first stalked before the age of 25, 12.9% before the age of 18. (NISVS, Data Brief 2018). The high proportion of interpersonal violence cases perpetrated by adolescent offenders, demonstrates that true prevention requires early education initiatives on building healthy relationships during adolescence.

E. Sexual Assault Prevention and Treatment for Domestic Violence Child and Adult Victims

In 2012, the ASD found many children experienced sexual abuse (8%) at the hands of their adult-victim's offender. Similarly in 2021, 11% of adult domestic violence victims seeking counseling services and 14.5% of children were sexually assaulted by their offender.

The NISVS State Report reported that 16.5% of women in New Mexico that were ever victims of intimate partner violence, experienced contact sexual violence (rape and/or unwanted sexual contact) by their intimate partner. This suggests that effective prevention and treatment programs for domestic violence victims must include components of sexual assault prevention and treatment or must provide referrals to appropriate sexual assault services.

F. Interpersonal Violence Prevention and Advocacy for Males

In New Mexico in 2021, 31% of domestic violence victims identified by law enforcement were males. The NISVS State Report found that 33.3% of New Mexico men were victims of intimate partner violence in their lifetime and 6.4% of adult males were victims in the previous 12-month period. In New Mexico, this is equivalent to an estimated 51,938 adult men who experienced intimate partner violence in 2021. More outreach must be done to identify male victims of interpersonal violence and offer prevention and treatment programs specific to males.

G. Providing Offender Treatment Programs

In New Mexico, 73% of suspects identified by law enforcement and 84% of offenders identified by domestic violence service providers in 2021, were male. Findings from the NISVS State Report revealed that in 84.8% of lifetime stalking victimizations with female victims and 43% of lifetime stalking victimizations with male victims, had a male offender. Perhaps greater outcomes in domestic violence prevention may be realized through greater availability of offender prevention and therapeutic programs that include strategies for addressing aggression in male socialization.

H. Evidence Supporting the Need to Identify Domestic Violence Victims in the Healthcare Setting

In 2021, law enforcement reported that 41% of adult victims were physically injured during a domestic violence incident. Similarly, statewide service providers reported that 35% of adults and 25% of children were physically injured by the adult victim's offender during a domestic violence incident. The NISVS State Report stated that an average 30.8% of female victims of intimate partner violence and 13.4% of male victims of intimate partner violence each year nationally, were injured. Additionally, an average 15.3% of women and 6.2% of men each year required medical care for their injuries. This suggests that New Mexico healthcare facilities may play an important role in both, the identification of domestic violence victims and their referral to appropriate services.

Patients that are seen in the healthcare/emergency room setting with a domestic violence-related injury are typically not reported to law enforcement and represent a substantial gap in reporting. While many healthcare facilities use screening tools to identify patients who are victims of domestic violence, no standardized monitoring system to reliably document the number of these individuals currently exists. Methods to determine healthcare utilization by victims of violence through e-codes or billing databases have been unsuccessful and are unreliable at best, due to definitional problems of the codes, practitioner discretion and inconsistencies in naming injuries, and the insurance-related intentions of billing databases. The need to rectify these problems is underscored by findings from the NISVS State Report which revealed substantial co-morbidity with intimate partner violence victims with regard to chronic physical and mental health problems. Among women victims of intimate partner violence, 6.2% reported poor physical health compared to 3.0% of women with no history of violence. Similarly, among women victims of intimate partner violence, 3.6% reported poor mental health compared to 1.1% of women with no history of violence.

The process for collecting standardized domestic violence data from statewide medical facilities is not yet established. Since many times the first, and perhaps only contact a victim may have with the "helping system" is through a hospital emergency department or physicians' office, this creates a significant void in the Central Repository data and represents a major obstacle in accurately defining the scope and nature of domestic violence in our state. Moreover, until better protocols are established for identifying patient visits associated with interpersonal violence, a significant portion of the total cost of interpersonal violence to individuals, their communities, and the state cannot be estimated.

I. Evidence Supporting the Need for Better Court Data on Domestic Violence

The Central Repository obtains data on many crimes against a household member from the Administration Office of the Courts: battery/aggravated battery, assault/aggravated assault, stalking/aggravated stalking, false imprisonment, criminal damage to property, deprivation of property, harassment, and violation of a restrictive order.

Still, more comprehensive protection order information is needed to determine the efficacy of protection orders and emergency protection orders, their rate of enforcement, and the consequences for violating protection orders for offenders and victims.

It is important to obtain better court data because evidence of currently available data demonstrates that over half of all district court domestic violence cases and over three-quarters of magistrate court domestic violence cases in the last 10 years were dismissed. Additionally, there has been a steady decrease in

the rate of domestic violence convictions in statewide district and magistrate courts. In 2021, the conviction rates of disposed domestic violence cases in district (27%) and magistrate courts (5%) were among the lowest rates of conviction over the last ten years.

Without better data from the courts, vital information, such as why the dismissal rate in domestic violence cases has increased and why the rate of conviction for domestic violence cases has decreased, remains unknown. Answers to these questions will serve to improve the efficacy of legal advocacy for domestic violence victims.

J. Covid-19 Pandemic Implications for Change

In 2019, the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) published a report on Biodiversity and Ecology that warned of future pandemics. The events of 2020 have taught us that it is critical to fully understand our capabilities to serve and protect during times of mass trauma. The government and the private sector must work together to take strategic action to address the range and scope of system failures during the COVID-19 pandemic that resulted in devastating human and economic costs.

Perhaps nowhere is the need to ensure that appropriate policies and systems are in place, communities well equipped and prepared, and response effectively coordinated during catastrophic events, than among those systems and professionals whose purpose it is to prevent domestic violence and further, effectively assist those who have been abused.

Lessons from the pandemic have shown that there is no aspect of domestic violence response that does not need to be analyzed and evaluated for determining the changes that are needed to ensure that, during catastrophic events: 1) at risk families are identified, know a way to seek help, and can access help; 2) helping agencies are adequately staffed with trained personnel, equipped, coordinated with each other, and funded to continue operations; and 3) staff is safe, with needed protections for themselves and their families that enable them to effectively continue to perform their work.

INCIDENCE AND NATURE OF DOMESTIC VIOLENCE IN NEW MEXICO XX:
An Analysis of 2021 Data from
The New Mexico Interpersonal Violence Data Central Repository

APPENDICES

Appendix A: Life Experiences of Adult Survivors of Domestic Violence

The Adult Survivor Database (ASD) was developed to capture research information on individual domestic violence survivors who seek assistance from statewide domestic violence service providers. In 2012, eleven statewide service provider agencies began using the ASD. For calendar year 2012, there were 1,101 records available for analysis.

I. FINDINGS

A. Demographics

1. Survivor Gender, Race, Age, Sexual Orientation, Marital Status, and Language

Most domestic violence survivors were female (93%), Hispanic (56%) (see **Figure 1**), with a median age of 33 (see **Figure 2**). Sexual orientation was reported on only one-third (38%) of survivors, of which 95% were self-identified as heterosexual, 3% bisexual, and 2% lesbian. Marital status was not directly captured. However, when the survivor's relationship with the current abuser was documented, 27% were married and 6% were divorced.

One-quarter (24%) of domestic violence survivors speak a first language other than English. See Table A. A greater proportion of Spanish speaking survivors than survivors speaking other languages reported having difficulty with English: two-thirds (66%) of Spanish speaking survivors reported having difficulty with English, compared to 37.5% of Native speaking survivors, 7% of survivors of "other" languages, and 1% of English speaking survivors.

Table A. Survivor First/Preferred Language

First/Preferred Language	Number of Survivors	Percent Survivors
English	571	76%
Native American	8	1%
Other	15	2%
Portuguese	1	0.1%
Sign Language	3	0.4%
Spanish	149	20%
Total	747	100%

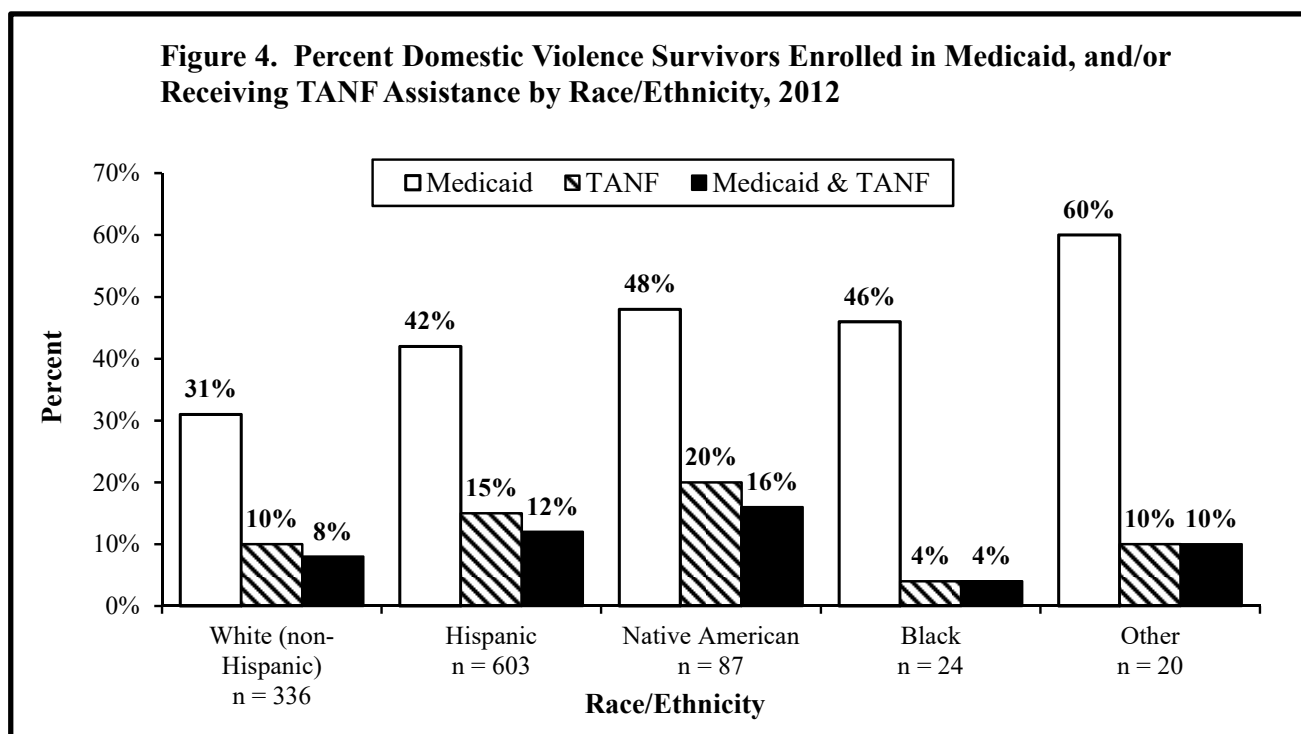

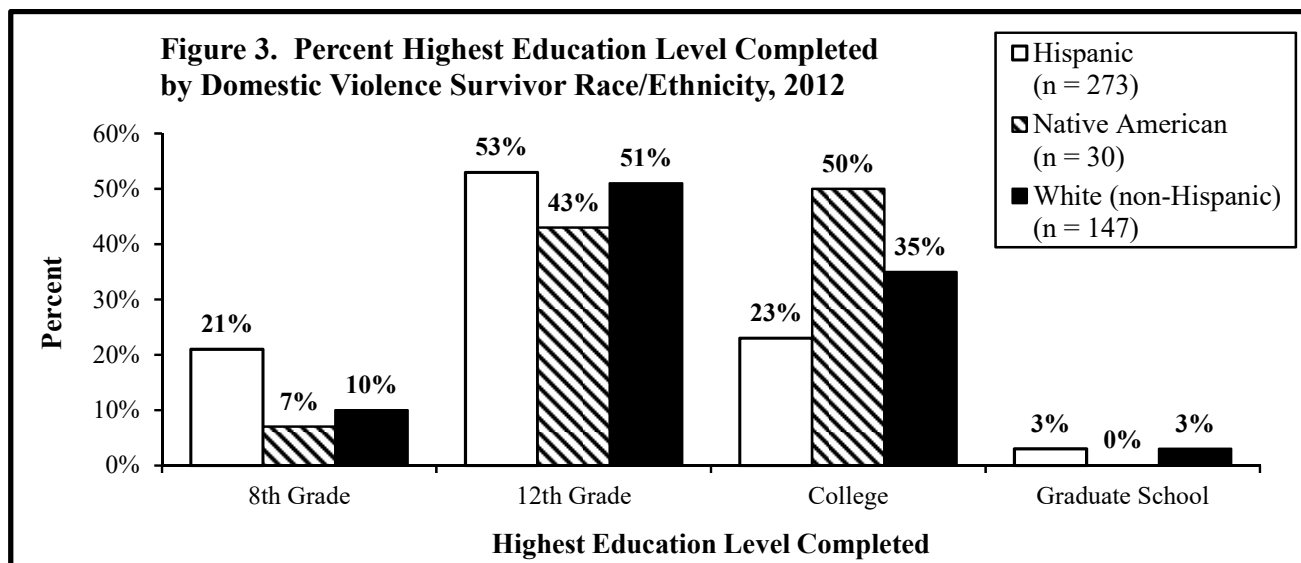

2. Survivor Education Level

Education level was reported for 478 survivors. Of these, 84% achieved a high school equivalent or higher education level. One-third (32% or 154) went to college or graduate school. Of 154 who went to college or graduate school, 79 (51%) completed their degree.

Education level was documented on too few Asian survivors (0), Black survivors (9), Pacific Islander survivors (1), survivors of mixed race (3) and survivors of "other" races (9) to validly examine. Among races/ethnicities that can be compared, 93% of Native Americans, 89% of Whites (non-Hispanic), and 79% of Hispanics completed high school or a higher level of education. Half (50%) of Native American survivors completed college or graduate school, compared to 38% of White (non-Hispanic) survivors and 26% of Hispanic survivors. **See Figure 3.**

3. Survivor Income

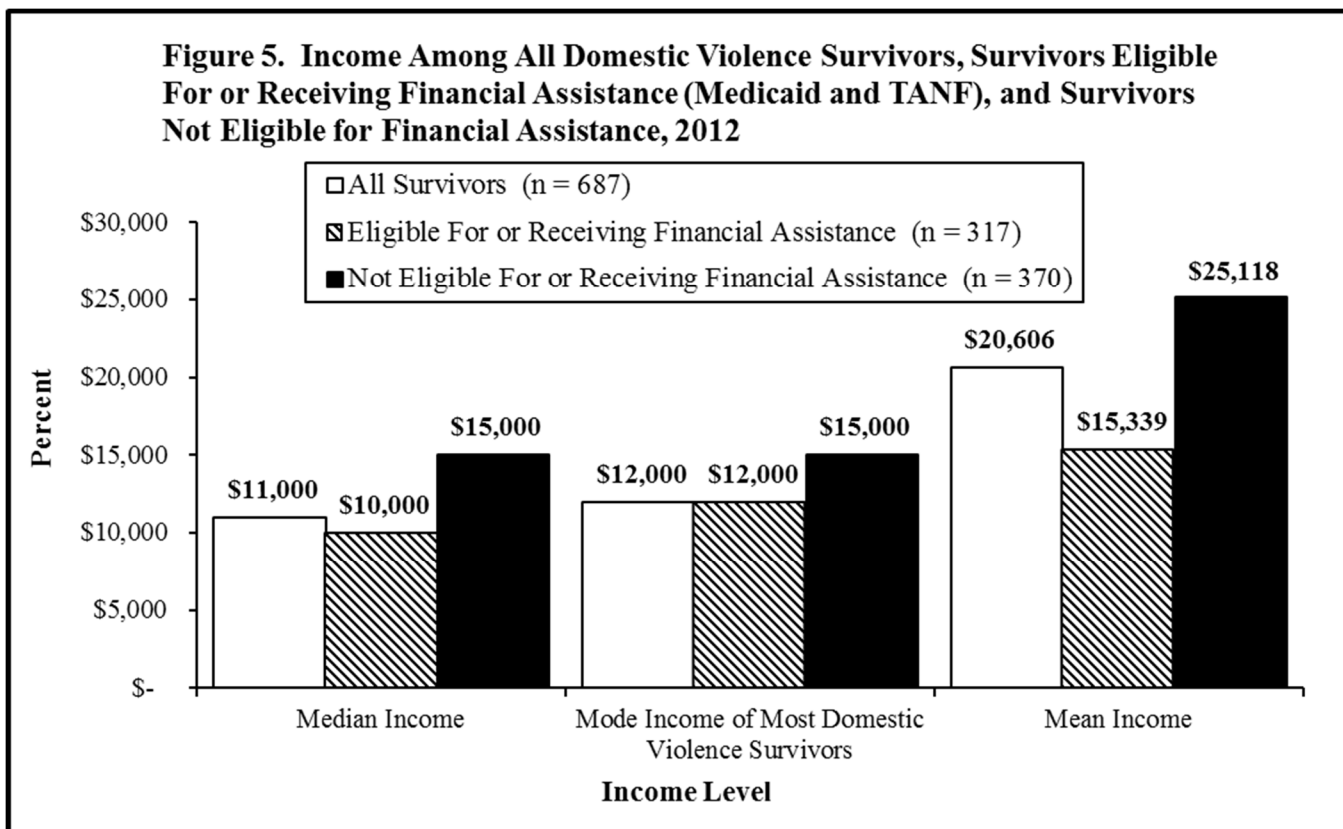

Slightly over one-third (39%) of survivors were enrolled in Medicaid (430), 13% (148) received TANF Assistance, and 11% (119) were involved in both programs. An examination of income by survivor race/ethnicity among those with a minimum of 20 survivors, reveals that "other" race was the one with the greatest proportion of survivors enrolled in Medicaid (60%), followed by Native Americans (48%), Blacks (46%), Hispanics (42%), and Whites (non-Hispanic) (31%). Native American survivors comprised the race with the greatest proportion receiving TANF assistance (20%) and involved in both Medicaid and TANF programs (16%). **See Figure 4.**

Of 687 survivors whose income was reported, the median income was \$11,000. Most (mode) survivors reported a yearly income of \$12,000. The average income was \$20,606.

There were 642 survivors *not* eligible or receiving financial assistance (TANF and Medicaid). Of these, income was reported for 370 survivors. The median income was \$15,500. Most (mode) survivors not eligible or receiving financial assistance reported an income of \$15,000. Their average income was \$25,118.

There were 459 survivors who were eligible or receiving financial assistance. Of these, income was reported for 317 survivors. The median income was \$10,000. Most (mode) survivors eligible or receiving financial assistance reported an income of \$12,000. Their average income was \$15,339. See **Figure 5**.

Those survivors *not eligible/not receiving* financial assistance had a median income 50% higher, and an average income 64% higher, than those eligible/receiving assistance. However, the mean income of all survivors eligible/receiving or not, is \$11,000 - 4% below the federal poverty guideline's level of poverty for an individual (\$11,490); and well below the 133% (\$15,282) to 150% (\$17,235) of their income to qualify for federal assistance programs. In fact, 71% (490) of the 687 survivors with income reported had an actual income that would qualify them for federal assistance programs at the higher threshold of 150% of income, and 66% (456) would qualify for federal assistance programs at 133% of income.

An examination of income by race/ethnicity reveals that White (non-Hispanic) survivors reported the highest income (mean = \$20,653; median = \$12,000), followed by Hispanic survivors (mean = \$17,667; median \$12,000), survivors of "other" races (mean = \$11,347; median = \$10,326), Native American survivors (mean = \$10,947; median = \$8,868) and Black survivors (mean = \$11,542; median = \$8,382). See **Figure 6**.

4. Survivor Living Status

Over half (55%) of survivors did *not* live in their own rented apartment or own a home: 25% lived in shelter, 23% lived with a friend or relative, 3% were homeless/ living on the street, 2% lived with the offender, and 1% lived in transitional housing. See **Figure 7**.

When living status was examined by survivor income, significantly fewer survivors who need financial assistance live in an apartment or their own home: over half (57%) of survivors not eligible/not receiving financial assistance (TANF or Medicaid) live in a rented apartment or own home, compared to 42% of survivors who are eligible/receive assistance. Similarly, a significantly greater proportion (29%) of those eligible/receiving assistance, than those not eligible/not receiving assistance (15%), live with a friend or relative. See **Figure 8**.

Survivor Family of Origin and Childhood Experiences

1. Witnessing Family Violence As A Child and Child Abuse

One-third of domestic violence survivors reported that they witnessed family violence as a child. Children who witnessed family violence were four times more likely (59%) to experience child abuse than children who did not witness family violence (14%).

Over one-quarter (29%) of survivors reported actually being abused as a child. More female survivors reported witnessing (35%) and experiencing (30%) family violence, than male survivors (24% and 17%, respectively). However, this rate difference between genders should be viewed with caution as the number of male domestic violence survivors is relatively few (75).

When witnessing abuse and experiencing child abuse were examined by race/ethnicity, more Black survivors (58%) reported witnessing abuse, and more survivors of “other” races (50%) reported experiencing actual abuse. Fewer Hispanic survivors than survivors of all other races, reported witnessing (30%) or experiencing (23%) child abuse. See **Figure 9**.

Of 322 victims abused as a child, 304 specified the type of abuse experienced. Of these, 68% (208) experienced physical abuse, 68% (206) emotional abuse, and 50% (153) sexual abuse as a child. One-quarter (26% or 80) of victims experienced all three types of abuse. One-third (31% or 95) experienced physical and sexual abuse; one-half (52% or 158) experienced physical and emotional abuse; and one-third (30% or 90) experienced sexual and emotional abuse.

2. Parental substance abuse and mental illness

Nine percent (103) of domestic violence survivors reported growing up with a parent with a substance abuse problem. Five percent (55) of domestic violence survivors reported growing up with a parent with a mental illness.

Domestic violence survivors with a parent with mental illness, than survivors with a parent without mental illness, were 8 times more likely to also have a parent with a substance abuse problem: over half (58%) of survivors with a parent with mental illness compared to 7% of survivors with a parent without mental illness, reported having a parent with a substance abuse problem.

3. Child/Abuser relationship

Of 322 victims abused as children, 232 reported the relationship to their abuser. Of these, 84% (195) were abused by a family member, 25% (58) by a non-family member, and 3% (8) by a stranger. One survivor (.04%) was abused by a family member, non-family member, and a stranger; 24 (10%) were abused by both a family member and non-family member. Three survivors (1%) were abused by a family member and a stranger; and 3 (1%) were abused by a non-family member and a stranger.

Among survivors who experienced child abuse, there was a slight difference in the victim/abuser relationship and the likelihood to have suicide thoughts and attempt suicide. One-third (30%) of survivors abused as children by a family member thought about suicide and 21% attempted suicide. Similarly 28% of survivors abused as children by a non-family member thought about suicide and 17% attempted suicide.

4. In Shelter as A Child

One percent (16) of domestic violence survivors reported being in a domestic violence shelter as a child. As this number is so few, it cannot validly be examined by other factors.

B. Survivor Risk Factors

1. Survivor Substance Abuse and Mental Illness

Overall, six percent (69) of domestic violence survivors were told they have a substance abuse problem. Six percent (63) of female survivors and eight percent (6) of male survivors reported being told they have a substance abuse problem.

Thirteen percent of survivors were told they have a mental illness. In this analysis with few (75) male survivors, slightly more males (15%) than females (13%) were told they had a mental illness.

When survivor substance abuse and mental illness were examined by race/ethnicity, more survivors of “other” races, reported mental illness (35%) and having a substance abuse problem (25%) than survivors of all other races/ethnicities. See **Figure 10**. As there are relatively few survivors of “other” races (20) and Black survivors (24), these findings should be viewed with caution.

Survivors abused as a child (12%) were three times more likely than survivors who did not experience child abuse (4%), to be told they have a substance abuse problem.

Survivors abused as a child (26%) were four times (3.7) more likely than survivors who did not experience child abuse (7%), to be told they have a mental illness.

Survivors told they have a mental illness were five times more likely than survivors without mental illness to have a substance abuse problem: Of 142 survivors told they have a mental illness, 28 (20%) were also told they have a substance abuse problem. Of 959 survivors not told they have a mental illness, 41 (4%) have been told they have a substance abuse problem.

Five percent of survivors reported having a parent with a mental illness. However, survivors who were told they have a mental illness were 12.5 times more likely (25%) to have a parent with mental illness, than survivors without mental illness (2%).

2. Suicide Ideology and Attempts

Overall, 15% (168) of domestic violence survivors thought about suicide, and 9% (98) reported at least one suicide attempt. When examined by gender, more female survivors, 16% (162), than male survivors, 7% (5) reported thinking about suicide; and more female survivors, 9% (96), than male survivors, 3% (2) reported at least one suicide attempt.

When suicide ideology and attempts were examined by race/ethnicity, slightly more survivors (25%) of “other” races thought about and attempted (15%) suicide than all other races/ethnicities. See **Figure 11**. As there are relatively few survivors of “other” races (20) and Black survivors (24), these findings should be viewed with caution.

Those abused as a child were three times more likely than those not abused to report thinking about suicide: of 322 victims abused as children, 30% (96) reported that they thought about suicide. Of 779 not abused as children, 9% (72) thought about suicide. Those abused as children were four times more likely (19%) than those not abused (5%) to attempt suicide.

Figure 11. Percent Domestic Violence Survivors That Thought About and/or Attempted Suicide, by Race/Ethnicity, 2012

Survivors who experienced emotional abuse, alone or in combination with physical and/or sexual abuse were more likely to attempt suicide than those who did not experience emotional abuse. While more survivors who suffered sexual abuse thought about suicide (among survivors who reported only one type of abuse), slightly more survivors who reported experiencing emotional abuse (24%) attempted suicide, than those who reported sexual abuse (21%), or physical abuse (11%). See Figure 12.

Figure 12. Percent Domestic Violence Survivors Who Reported Experiencing One Type of Child Abuse and Thinking About or Attempting Suicide, 2012

Similarly, more survivors who suffered a combination of abuses which included emotional abuse, thought about and attempted suicide than survivors of physical and sexual abuse. See **Figure 13**.

Domestic violence survivors with a parent with mental illness were six times (42%) more likely to have attempted suicide, then survivors with a parent without mental illness (7%).

D. Adult Domestic Violence Experiences

1. Prior Adult Domestic Violence Experience

Over half (57%, 628) of survivors reported having a prior domestic violence experience as an adult. Of these, three-quarters (72% or 455) were involved in a prior domestic violence experience with the same offender, 21% with a different offender, and 11% (68) with both the same offender and a different offender.

2. Prior In-Shelter Experience

Sixteen percent of survivors reported being in shelter before as an adult. Of these 179 victims in shelter before as an adult, 163 reported the number of times. Over one-third (39%) were in shelter two or more times.

Among race/ethnicities with a minimum of 20 survivors, “other” races comprised the race/ethnicity with the greatest proportion of survivors (40%) who reported being in shelter before as an adult, followed by Black survivors (25%), Native American survivors (22%), White (non-Hispanic) survivors (16%), and Hispanic survivors (14%). See **Figure 14**.

It requires further study with a greater number of survivors, but being in domestic violence shelter as a child may be a good predictor of being in domestic violence shelter as an adult. Those in this analysis who were in a domestic violence shelter as a child were four (3.9) times more likely than those not sheltered as a child, to be in a domestic violence shelter as an adult: of 16 victims in shelter as a child, 62.5% (10) were in shelter also as an adult; of 1085 victims not in shelter as a child, 16% (169) were in shelter as an adult. As stated, these findings on the relationship between being in shelter as a child and being in shelter as an adult should be viewed with caution as they are based on only 16 survivors in this analysis.

3. Survivor/Abuser Relationship

Current or former intimate partners were the abuser in 84% of the survivor domestic violence cases. *Current or former boyfriends* comprised the relationship with the greatest proportion of abusers (45%), followed by *current and former spouses* (33%). *Ex-girlfriends* and *girlfriends* comprised 6% of abusers, and *family members* comprised 9%.

Females (86%) were more likely to be abused by an intimate partner than males (70%). Males (20%) were significantly more likely to be abused by a family member than females (9%).

While an equal proportion of survivors lived with their abuser as did not live with their abuser (50%), significantly more female survivors (52%) than male survivors (37%) lived with their abuser.

When examined by income, those survivors who live with their abuser reported an annual median income of \$2400 less (\$9,600) than those who do not live with their abuser (\$12,000).

4. Domestic Violence Incidents Involving Survivor Substance Abuse

Twelve percent (137) of domestic violence survivors reported using alcohol/drugs during the domestic violence incident.

Survivors reported that abusers used alcohol/drugs in four times (53%) as many domestic violence incidents as incidents where survivors used alcohol/drugs (12%). Survivors who used alcohol/drugs during the domestic violence incident were two (1.8) times more likely (84%) than survivors who did not use alcohol/drugs (48%) to be involved in an incident where their abuser used alcohol/drugs.

Survivors reported that the abuser used alcohol/drugs significantly more in domestic violence incidents with female victims (54%), than male victims (45%).

Domestic violence survivors who were told they have a substance abuse problem, were five times (4.8) more likely to have used alcohol/drugs during the domestic violence incident (48%) than survivors without a substance abuse problem (10%).

Domestic violence survivors told they have a mental illness, were twice as likely to have used alcohol/drugs during the domestic violence incident (22%), than survivors without a mental illness (11%).

5. Type of Abuse/Violence Experienced from The Abuser

Survivors abused as children are six times more likely to experience abuse in an adult domestic violence incident, than survivors who were not abused as children: of 978 survivors who reported abuse in a recent or past domestic violence incident, 32% (316) reported experiencing child abuse; of 123 survivors who reported no abuse in a past or recent incident, 5% (6) reported experiencing child abuse.

In all, there were 978 (89%) survivors who reported recent or past abuse as an adult by an intimate partner.

There were 935 survivors (85%) who reported abuse from their offender in the most recent domestic violence incident. Of these, most (87%) reported verbal abuse, followed by physical attack (60%), being threatened to be harmed or killed (34%), and physical restraint (29%). One-quarter (27%) were either held hostage (14%) or prevented from calling for help (13%). A lethal weapon was used in 12% of cases, and strangulation was involved in 11% of cases. Similarly, 11% of survivors reported being sexually abused/coerced, as well.

There were 820 survivors who reported being abused by an intimate partner in the past. Similar to the proportion of victims who reported abuse in the most recent incident, most victims who experienced past abuse from an intimate partner were verbally assaulted/degraded (83%), physically attacked (62%), or threatened (33%). Seventeen percent of those abused by an intimate partner in the past were sexually coerced, 15% respectively, were held hostage and threatened with a lethal weapon, and 14% respectively, were strangled and prevented from calling for help.

Of the 820 survivors who reported abuse by an intimate partner in the past, 807 (98%) reported abuse in the most recent domestic violence incident. Overall, there were 978 victims who reported abuse in a past or recent incident. Of these, 136 (14%) reported they or a partner were pregnant during the abuse.

6. Injury

One-quarter (27%) of survivors reported being injured in a recent or past domestic violence incident. Females were almost three (2.6) times more likely (29%) than males (11%) to report being injured during a domestic violence incident.

Among races/ethnicities represented by at least 20 domestic violence survivors, Native Americans (56%) reported the most survivors who incurred injury from a domestic violence incident, followed by Black survivors (42%), survivors of "other" races (40%), White (non-Hispanic) survivors (26%), and Hispanic survivors (23%).

Survivors who ever experienced abuse from an intimate partner while they or their partner were pregnant, were two times (2.2) more likely to report having been injured in a domestic violence incident (52%), than survivors who reported they or their partner did not experience abuse while pregnant (24%).

Involvement in a domestic violence incident as an adult increases one's likelihood of injury in a subsequent domestic violence incident: three-quarters (77%) of those survivors who reported being injured in a domestic violence incident, reported being involved in a prior adult domestic violence experience.

Survivors who have been told they have a substance abuse problem, were almost two times (1.8) more likely to report being injured in a domestic violence incident (46%) than those who do not have a substance abuse problem (26%).

Survivors who have been told they have a mental illness, were almost two times (1.7) more likely to report being injured in a domestic violence incident (42%) than those who do not have a mental illness (25%).

7. Medical Treatment

Of the 302 survivors who were injured, 44% (132) required medical treatment.

Over all, the rate of seeking medical treatment among injured survivors who required it, was quite high. Of the 132 injured survivors who required medical treatment, 83% (110) sought treatment.

Slightly more (87%) survivors with a substance abuse problem who needed treatment, sought treatment. Similarly, slightly more (84%) survivors with a mental illness who required treatment, sought treatment.

As mentioned earlier, female survivors were three times (29%) more likely to report being injured during a domestic violence incident than male survivors (11%). Of 294 female victims who were injured in a domestic violence incident, 129 (44%) required medical treatment. Of the 129 female survivors who required medical treatment, 85% (109) sought medical treatment.

A valid analysis on the proportion of males who required treatment and sought it was not possible in this dataset: of 75 male survivors, eight reported being injured during a domestic violence incident and only one required treatment, but did not get it.

Among races/ethnicities represented by at least 20 domestic violence survivors, Black survivors and "other" races (50%, respectively) reported the most survivors who required medical treatment, followed by Native American and White (non-Hispanic) survivors (45%, respectively), and Hispanic survivors (41%).

Among races/ethnicities represented by at least 20 domestic violence survivors, all (100%, respectively) Black survivors and "other" race survivors who required medical treatment, sought medical treatment. However, the number of survivors from these racial groups is very few so these findings should be viewed with caution. Ninety percent of White (non-Hispanic) survivors who required medical treatment sought it, followed by 82% of Native American survivors, and 81% of Hispanic survivors.

8. Children present

Three-quarters (77% or 836) of survivors reported having children. When examined by gender, three-quarters (77%) of female survivors and 69% of male survivors have children.

Most survivors (29%) have two children. The mean number of children per survivor is 2.7. Male survivors had a slightly higher mean number of children (2.9) compared to females (2.7). Among races/ethnicities represented by 20 or more survivors, Native American survivors had the highest mean number of children (2.9), followed by Hispanic survivors (2.8), and White (non-Hispanic) survivors (2.5).

Of 841 survivors with children, 47% (398) reported that their children were present during the most recent domestic violence incident; and 40.5% (341) during a past domestic violence incident.

Survivors reported children present in a greater proportion of domestic violence incidents where the survivor lived with their abuser (53%), than incidents where survivors did not live with their abuser (41%).

There was a negligible difference in annual median income between survivors with children present during a domestic violence incident (\$12,000) and survivors where children were not present (\$10,872).

9. Children Abused

Of 841 children present at domestic violence incidents, 20% (167) were abused by the survivor's abuser. Most children were verbally abused/degraded (69%), physically attacked (32%), threatened that they or loved ones would be harmed or killed (20%), or physically restrained (17%). Seventeen percent of children were either held hostage (10%) or prevented from calling for help (7%). Eight percent of children were sexually abused, 6% threatened with a lethal weapon, 5% strangled, and 4% threatened that their pets would be harmed or killed.

10. Children Injured

Of 167 children present and abused in a domestic violence incident, 7% (12) were injured. Of 12 children injured, 3 (25%) required medical treatment. Of three children who required medical treatment, one obtained medical treatment.

11. Law Enforcement and Prosecution Involvement

Sixty percent of survivors reported a domestic violence incident to law enforcement. Slightly more (64%) male survivors reported a domestic violence incident to law enforcement than female survivors (60%).

Slightly more survivors with children (61%) than survivors without children (56%) reported their domestic violence incident to law enforcement. There was negligible difference in a survivor's likelihood of reporting to law enforcement by their number of children, as those survivors who reported to law enforcement had an average 2.7 children and those who did not report had an average 2.8 children.

When examined by race/ethnicity, among races/ethnicities with 20 or more survivors, there were negligible differences in the proportion who reported a domestic violence incident to law enforcement. Slightly more Black and Native American survivors (67%, respectively) reported their incident to law

enforcement, followed closely by survivors of “other” races (65%), White (non-Hispanic) survivors (61%) and Hispanic survivors (60%).

Of the 40% of survivors who never reported a domestic violence incident to law enforcement, only 38 reported the reason they never reported. The greatest number of survivors stated that they did not report because they were *scared* (19), followed by those who did not report because they *believed that nothing would get done* (6), and because they *wanted to work out the relationship* (5). See Table B.

Table B. Why Survivors Never Reported a Domestic Violence Incident to Law Enforcement

Reason	Total
Scared	19
It would get worse/he would get mad/scared of what husband will do	5
Scared for my life	2
He threatened to kill me, my family and take my child	1
Scared because I’m not a citizen	1
Scared	10
Family reasons	2
Wanted it to work out	5
Thought he would change	1
Thought I could handle it	1
Wanted it to work out	3
Didn’t think anything would get done	6
They would just tell me to get an order of protection	1
Didn’t think law enforcement would understand emotional abuse	1
Didn’t think it was bad enough for the cops to do anything	1
Never got physical before	1
Just verbal/mental abuse	1
Non-violent	1
Just wanted to get away	2
Didn’t want anyone else involved	1
Hiding own and perpetrators drug use from CYFD	1
Offender took my phone so I couldn’t call anyone	1
Mental illness (need professional help – not jail)	1

One-quarter (26%) of survivors reported that they had been stalked by the abuser in a recent or past domestic violence incident. Of these 285 stalking survivors, 21% (60) reported the stalking to law enforcement.

When stalking was examined by race/ethnicity, a greater proportion of Black survivors (58%) were stalked by their abuser, followed by survivors of “other” races (40%), Native American survivors (39%), Hispanic survivors (24%) and White (non-Hispanic) survivors (23%).

Half (49%) of domestic violence survivors obtained a protection order for the most recent domestic violence incident. Males (81%) were almost two times (1.8) more likely than females (46%) to obtain a protection order for the most recent domestic violence incident.

Of the 628 survivors involved in a prior domestic violence incident as an adult, 20% (125) obtained an order of protection. With regard to prior domestic violence events, more females (20%) than males (12%) reported obtaining a protection order.

Of the 628 survivors who had a prior domestic violence incident, 12% (77) pressed charges. More female survivors (13%) pressed charges for a prior domestic violence incident than male survivors (3%). The number of survivors who pressed charges was too few to do a valid analysis by gender, race, or income.

12. Case Dispositions and Sentencing

Of 77 survivors who pressed charges, the case dispositions were reported for 43. Of these cases, 58% obtained a conviction (51% prosecuted and found guilty, and 7% pled to a lesser charge), 30% of cases were dismissed, 5% of cases were acquitted, and in 7% of cases the offender was given a diversion program.

Of the 25 survivors who pressed charges and obtained a conviction, 23 (92%) received a sentence that included jail time. The case sentencing was reported in 14 of these cases. Over half (56%, 8) were sentenced to 3 months or less, 14% (2) were sentenced to 6 months, 21% (3) were sentenced 15-18 months, and 7% (1) to two years. The mean jail sentence was 7.2 months.

13. Leave/Stay History

Almost two-thirds (60% or 656) of survivors reported that they left a violent relationship at some time. Of these, one-third (32% or 212) reported that they returned.

Of 212 survivors who returned to their abuser, 101 reported why they returned. Most mentions for returning to their abuser include: *returned to try to work it out* (63), *returned for the children* (27), and *returned because they were scared* (15). See Table C.

Table C. Why Survivors Returned to a Violent Relationship They Left

Reason	Total
Tried to Work it Out	63
I thought he loved me	1
Hope he/she would change/said he would change/said he would get help	28
Felt sorry for him	3
He was going to counseling	4
Wanted it to work out	12
Love/I loved him	12
Thought things would get better	3
Returned for the Children	27
She was pregnant	1
Financially dependent on him	1
Children miss him	1
Returned for the children	24
Scared	15
Fear on my own/no support/lack of resources	7
Intimidated to return	1

Reason	Total
Said he would kill me/feared for my life	2
He found me/he took me forcefully	2
Scared	3
Family influence/pressure	1
He has complete control over me (financially, physically and mentally)	1
I was dumb/stupid	1
Don't know why I returned	2

When examined by survivor income, there was negligible difference in the annual median income of survivors who left a violent relationship at some time (\$11,000) and those who did not leave (\$10,872). Conversely, there was a greater difference in the median income of those who left and stayed away and those who left and returned: survivors who left a violent relationship and did not return had a median annual income \$2,080 greater (\$12,000) than those who left and returned (\$9,920).

Of the 628 survivors who were involved in a prior domestic violence experience, 43% (268) reported that they live with an offender with whom they have a prior domestic violence incident.

When examined by income, survivors who live with an offender with whom they have a prior domestic violence experience had a median annual income \$2400 less (\$9,600) than survivors who do not live with an offender with whom they have a prior domestic violence experience (\$12,000).

14. How Domestic Violence Survivors Hear About Service Providers

Of 969 survivors who reported how they heard about the domestic violence service provider agency, most (23%) were referred by law enforcement or were self/voluntary referred (20%). Twelve percent of survivors had used a service provider before, 9% were referred by a friend, 6% by a relative, and 5% by the adult court system. See Table D.

Table D. How Survivors Hear About Domestic Violence Service Providers

Source	Number of Survivors	Percent Survivors
A Lawyer	6	1%
Adult Court System	52	5%
CYFD Juvenile Justice Division	1	0%
CYFD Protective Services	30	3%
Doctor/family practitioner	9	1%
Employer	4	0%
Family member/Relative	57	6%
Friend	92	9%
Juvenile Court System	2	0%
Law Enforcement Agency	221	23%
Other	130	13%
Probation or Parole	4	0%
Public service announcement on TV	37	4%
School	2	0%
Self or voluntary referral	194	20%
Through an Order of Protection	3	0%
Tribal Government/Agency	12	1%
Used it before	113	12%
Total	969	100%

APPENDIX B. DEFINITIONS

Domestic violence incidence as determined by law enforcement include all incidents of assault, aggravated assault, battery, and aggravated battery as outlined in the “Crimes Against Household Members Act” as follows:

30-3-10. Short Title.

This act (30-3-10 to 30-3-18 NMSA 1978) may be cited as the “Crimes Against Household Members Act”.

30-3-11. Definitions

- A. As used in the Crimes Against Household Members Act (30-3-10 to 30-3-18 NMSA 1978), “household member” means spouse, former spouse, parent, present or former step-parent, present or former parent in-law, grandparent, grandparent-in-law, a co-parent of a child or a person with whom a person has had a continuing personal relationship. Cohabitation is not necessary to be deemed a household member for the purposes of the Crimes Against Household Members Act;
- B. “continuing personal relationship” means a dating or intimate relationship.

30-3-12. Assault against a household member.

- A. Assault against a household member consists of:
 - (1) an attempt to commit a battery against a household member; or
 - (2) any unlawful act, threat or menacing conduct that causes a household member to reasonably believe that he is in danger of receiving an immediate battery.
- B. Whoever commits assault against a household member is guilty of a petty misdemeanor.

30-3-13. Aggravated assault against a household member.

- A. Aggravated assault against a household member consists of:
 - (1) unlawfully assaulting or striking at a household member with a deadly weapon; or
 - (2) willfully and intentionally assaulting a household member with intent to commit any felony.
- B. Whoever commits aggravated assault against a household member is guilty of a fourth degree felony.

30-3-14. Assault against a household member with intent to commit a violent felony.

- A. Assault against a household member with intent to commit a violent felony consists of any person assaulting a household member with intent to kill or commit any murder, mayhem, criminal sexual penetration in the first, second or third degree, robbery, kidnapping, false imprisonment or burglary.
- B. Whoever commits assault against a household member with intent to commit a violent felony is guilty of a third degree felony.

30-3-15. Battery against a household member.

- A. Battery against a household member consists of the unlawful, intentional touching or application of force to the person of a household member, when done in a rude, insolent or angry manner.
- B. Whoever commits battery against a household member is guilty of a petty misdemeanor.
- C. Upon conviction pursuant to this section, an offender shall be required to participate in and complete a domestic violence offender treatment or intervention program approved by the children, youth and families department pursuant to rules promulgated by the department that define the criteria for such programs.
- D. Notwithstanding any provision to the contrary, if a sentence imposed pursuant to this section is suspended or deferred in whole or in part, the period of probation may extend beyond three hundred sixty-four days but may not exceed two years. If an offender violates a condition of probation, the court may impose any sentence that the court could originally have imposed and credit shall not be given for time served by the offender on probation; provided that the total period of incarceration shall not exceed three hundred sixty-four days and the combined period of incarceration and probation shall not exceed two years.

30-3-16. Aggravated battery against a household member.

- A. Aggravated battery against a household member consists of the unlawful touching or application of force to the person of a household member with intent to injure that person or another.
- B. Whoever commits aggravated battery against a household member by inflicting an injury to that person that is not likely to cause death or great bodily harm, but that does cause painful temporary disfigurement or temporary loss or impairment of the functions of any member or organ of the body, is guilty of a misdemeanor.
- C. Whoever commits aggravated battery against a household member by inflicting great bodily harm or doing so with a deadly weapon or doing so in any manner whereby great bodily harm or death can be inflicted, is guilty of a third degree felony.
- D. Upon conviction pursuant to Subsection B of this section, an offender shall be required to participate in and complete a domestic violence offender treatment or intervention program approved by the children, youth and families department pursuant to rules promulgated by the department that define the criteria for such programs.
- E. Notwithstanding any provision to the contrary, if a sentence imposed pursuant to the provisions of Subsection B of this section is suspended or deferred in whole or in part, the period of probation may extend beyond three hundred sixty-four days but may not exceed two years. If an offender violates a condition of probation, the court may impose any sentence that the court could originally have imposed and credit shall not be given for time served by the offender on probation; provided that the total period of incarceration shall not exceed three hundred sixty-four days and the combined period of incarceration and probation shall not exceed two years.

30-7-17. Multiple convictions of battery or aggravated battery.

- A. Whoever commits three offenses of battery against a household member as provided in Section 30-3-15 MNSA 1978 or aggravated battery against a household member as provided in Subsection B of Section 30-13-16 NMSA 1978, or any combination thereof, when the household member is a spouse, a former spouse, a co-parent of a child or a person with whom the offender has had a continuing personal relationship is guilty of a fourth degree felony.
- B. Whoever commits four or more offenses of battery against a household member as provided in Section 30-3-15 NMSA 1978 or aggravated battery against a household member as provided in Subsection B of Section 30-3-16 NMSA 1978, or any combination thereof, when the household member is a spouse, a former spouse, a co-parent of a child or a person with whom the offender has had a continuing personal relationship is guilty of a third degree felony.
- C. For the purpose of determining the number of offenses committed, each offense must have been committed after conviction for the preceding offense.

30-3-18. Criminal damage to property of household member; deprivation of property of household member.

- A. Criminal damage to the property of a household member consists of intentionally damaging real, personal, community or jointly owned property of a household member with the intent to intimidate, threaten, or harass that household member.
- B. Whoever commits criminal damage to the property of a household member is guilty of a misdemeanor, except that when the damage to the household member's interest in the property amounts to more than one thousand dollars (\$1000), the offender is guilty of a fourth degree felony.
- C. Deprivation of the property of a household member consists of intentionally depriving a household member of the use of separate, community or jointly owned personal property of the household member with the intent to intimidate or threaten that household member.
- D. Whoever commits deprivation of the property of a household member is guilty of a misdemeanor.

30-3A-2. Harassment

- A. Harassment consists of knowingly pursuing a pattern of conduct that is intended to annoy, seriously alarm or terrorize another person and that serves no lawful purpose. The conduct must be such that it would cause a reasonable person to suffer substantial emotional distress.
- B. Whoever commits harassment is guilty of a misdemeanor.

30-3A-3. Stalking

- A. Stalking consists of knowingly pursuing a pattern of conduct, without lawful authority, directed at a specific individual when the person intends that the pattern of

conduct would place the individual in reasonable apprehension of death, bodily harm, sexual assault, confinement or restraint of the individual or another individual.

B. As used in this section:

(1) “lawful authority” means within the scope of lawful employment or constitutionally protected activity; and

(2) “pattern of conduct” means two or more acts, on more than one occasion, in which the alleged stalker by any action, method, device or means, directly, indirectly or through third parties, follows, monitors, surveils, threatens or communicates to or about a person.

C. Whoever commits stalking is guilty of a misdemeanor. Upon a second or subsequent conviction, the offender is guilty of a fourth degree felony.

D. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted of stalking to participate in and complete a program of professional counseling at the person's own expense or a domestic violence offender treatment or intervention program.

30-3A-3.1. Aggravated Stalking

A. Aggravated stalking consists of stalking perpetrated by a person:

(1) who knowingly violates a permanent or temporary order of protection issued by a court, except that mutual violations of such orders may constitute a defense to aggravated stalking;

(2) in violation of a court order setting conditions of release and bond;

(3) when the person is in possession of a deadly weapon; or

(4) when the victim is less than sixteen years of age.

B. Whoever commits aggravated stalking is guilty of a fourth degree felony. Upon a second or subsequent conviction, the offender is guilty of a third degree felony.

C. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted of aggravated stalking to participate in and complete a program of professional counseling at his own expense.

30-4-3. False imprisonment

A. False imprisonment consists of intentionally confining or restraining another person without his consent and with knowledge that he has no lawful authority to do so.

B. Whoever commits false imprisonment is guilty of a fourth degree felony.

Appendix D. Law Enforcement Domestic Violence Data Collection Form
Y21

1. Agency Name _____
2. Quarter Reporting 1st ☐ 2nd ☐ 3rd ☐ 4th ☐ Year: 2021
3. _____ Number of **Harassment** Incidents (30-3A-3.2)
- 3a. _____ Number of **Stalking** Incidents 3b. _____ Number of Stalking Incidents resulting in a homicide
4. _____ Number of **Domestic Violence** (DV) Incidents for the quarter (Based on offense incident reports)
- 4a. _____ Number of Domestic Violence Incidents resulting in a homicide
- 4b. _____ Total number of DV homicide victims (_____ #female homicide victims _____ # male homicide victims)
5. _____ Number of male DV victims _____ Number of female DV victims _____ Number DV victims gender unknown
6. Number of DV victims per age group Number of DV suspects per age group

_____ 0-6	_____ 0-6
_____ 7-12	_____ 7-12
_____ 13-18	_____ 13-18
_____ 19-25	_____ 19-25
_____ 26-35	_____ 26-35
_____ 36-45	_____ 36-45
_____ 46-55	_____ 46-55
_____ 56-65	_____ 56-65
_____ 66+ _____ # victims age unknown	_____ 66+ _____ # suspects age unknown
7. Number of DV victims per each race/ethnicity Number of DV suspects per each race/ethnicity

_____ Caucasian	_____ Caucasian
_____ Hispanic	_____ Hispanic
_____ Native American	_____ Native American
_____ Asian/Pacific Islander	_____ Asian/Pacific Islander
_____ Black	_____ Black
_____ Other _____ # victim race/ethnicity unknown	_____ Other _____ # suspect race/ethnicity unknown
8. _____ Number of DV male suspects _____ Number of DV female suspects _____ Number DV gender unknown
- 9a. _____ Number of domestic violence incidents involving injury
- 9b. Of **9a** incidents, how many involved: victim injury _____ suspect injury _____ police officer injury _____
10. Number of DV incidents with each type of injury: _____ B (apparent broken bone) _____ I (possible internal injury)
 _____ L (severe laceration) _____ M (apparent minor injury) _____ O (other major injury)
 _____ T (loss of teeth) _____ U (unconscious) _____ Unknown
11. _____ Number of DV incidents a weapon was used
12. Number of DV incidents in which each type of weapon was used: _____ gun _____ knife _____ other
13. Number of each type of relationship of suspect/offender to victim. Suspect/Offender was a...
 _____ spouse _____ boyfriend _____ ex-boyfriend _____ relative _____ gay partner
 _____ ex-spouse _____ girlfriend _____ ex-girlfriend _____ other _____ gay ex-partner _____ unknown
- 14a. _____ Number of DV incidents where alcohol/drugs were used.
- 14b. Number of DV incidents alcohol/drugs used by: _____ victim only _____ suspect only _____ both
15. _____ Number of DV *incidents* where children were at the scene
- 16a. _____ Total number of *children* at the scene of domestic violence incidents
- 16b. Number of children per each age group: _____ 0-5 _____ 6-9 _____ 10-12 _____ 13-17 _____ 18-21 _____ unknown
17. Number of DV incidents where: _____ total incidents with **no arrests** made;
 _____ only *suspect* arrested; _____ only *victim* arrested; _____ both arrested;
 _____ total incidents where suspect left the scene. _____ total incidents for which a summons was issued.

Please send reports to: NMIPVDCR, 3909 Juan Tabo, Suite 6, Albuquerque, NM 87111 or fax to (505) 883-7530
 Reports due on **April 15th, July 15th, October 15th, and January 15th, 2022.** Call **Betty Caponera, 883-8020** for questions.

Domestic Violence Service Agencies

Quarterly Report To The NM Interpersonal Violence Data Central Repository

Agency Name: _____

Year: 2021 Quarter Reporting (check one): 1st ☐ 2nd ☐ 3rd ☐ 4th ☐***Please report aggregate numbers for the reporting quarter for each of the following questions. Only data on new clients served (during the reporting quarter) are to be reported.***1a. *Number of new clients served:* Victims/Survivors _____ Children As Victim Witnesses _____ Offenders _____
(does not include number of crises/hotline phone calls)

b. Number of crises/hotline phone calls handled for the quarter _____

2. Number of each Gender served: Victims/Survivors _____ Children As Victim Witnesses _____ Offenders _____

Males	_____	_____
Females	_____	_____

3. Number served in each Age Group: Victims/ Survivors _____ Children/Victim Witnesses _____ Offenders _____

0-5	_____	_____
6-11	_____	_____
12	_____	_____
13	_____	_____
14	_____	_____
15	_____	_____
16	_____	_____
17	_____	_____
18-21	_____	_____
22-40	_____	_____
41-59	_____	_____
60-74	_____	_____
75 and older	_____	_____
Unknown	_____	_____

4. Number served in each Ethnic Group: Victims/Survivors _____ Children/Victim Witnesses _____ Offenders _____

White-Non-Hispanic	_____	_____
Hispanic	_____	_____
American Indian	_____	_____
Black	_____	_____
Asian	_____	_____
Other	_____	_____
Unknown	_____	_____

5. Number from each Referral Source Survivors _____ Children/Victim Witnesses _____ Offenders _____

CYFD Protective Services	_____	_____
CYFD Juvenile Justice Division	_____	_____
Tribal Government/Agency	_____	_____
Family/Relative	_____	_____
Self	_____	_____
School	_____	_____
Juvenile Court System	_____	_____
Adult Court System	_____	_____
Law Enforcement Agency	_____	_____
Friend	_____	_____
Client or Former Client	_____	_____
Employer	_____	_____
Other	_____	_____
Unknown	_____	_____

6. Number of new clients receiving each service:

<u>Adults/Victims</u>	<u>Children</u>	<u>Offenders</u>
<input type="checkbox"/> Counseling (individual/group)	<input type="checkbox"/> Counseling (individual/group)	<input type="checkbox"/> Counseling (individual/group)
<input type="checkbox"/> Emergency Shelter	<input type="checkbox"/> Emergency Shelter	<input type="checkbox"/> Psychoeducation Classes
<input type="checkbox"/> Transportation	<input type="checkbox"/> Daycare	<input type="checkbox"/> Case Management
<input type="checkbox"/> Financial Support	<input type="checkbox"/> School Arrangements	<input type="checkbox"/> Other
<input type="checkbox"/> Housing Assistance	<input type="checkbox"/> Case Management	
<input type="checkbox"/> Order of Protection	<input type="checkbox"/> Other	
<input type="checkbox"/> Legal Advocacy Other Than Order of Protection		
<input type="checkbox"/> Psychoeducation Classes (parenting, anger management, communication, dv education, etc)		
<input type="checkbox"/> Case Management		
<input type="checkbox"/> Crises Intervention		
<input type="checkbox"/> Other: _____		

7. Number for each Survivor/Offender Relationship category as reported by adult victims:

<input type="checkbox"/> Dating	<input type="checkbox"/> Living Together	<input type="checkbox"/> Married	<input type="checkbox"/> Family Member
<input type="checkbox"/> Separated	<input type="checkbox"/> Divorced	<input type="checkbox"/> Ex-partner	<input type="checkbox"/> Other <input type="checkbox"/> Unknown

8. Number for each Length of Relationship category as reported by adult victims:

<input type="checkbox"/> 0 months - 11 mos.	<input type="checkbox"/> 1 year - 2 yrs.	<input type="checkbox"/> 3 - 5 yrs.
<input type="checkbox"/> 6 - 10 yrs.	<input type="checkbox"/> 11 - 20 yrs.	<input type="checkbox"/> 21+ years <input type="checkbox"/> Unknown

9. Number of New Clients Who Were Abused or Witnessed Abuse as a Child:

<u>Adult Victims (as reported by adult victims):</u>			<u>Offenders (as reported by adult victims):</u>		
Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>	Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>

<u>Offenders (as reported by offenders in treatment):</u>		
Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>

10. Use of Alcohol/Drugs At The Time of the Domestic Violence Incident:

<u>Adult Victims (as reported by adult victims):</u>			<u>Offenders (as reported by adult victims):</u>		
Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>	Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>

<u>Offenders (as reported by offenders in treatment):</u>		
Number Yes <input type="checkbox"/>	Number No <input type="checkbox"/>	Unknown <input type="checkbox"/>

11. Number of adult victims/survivors who reported their incident to law enforcement ____.
12. Number of adult victims/survivors who reported that children were present at the time of the presenting incident ____.
